- 187. S. 1819. Pall., Shr. and Old-Kan. Inser. Nos. 35 and 229; Mysore Inser. No. 114, p. 211. Definitionally copper-plate and stone inscriptions of Göpála Ganda, 'lord of the Ávati nad.'
- 'Balivaliana-Baka 1619, the Isvars sadvatsara; Saturday, the fifteenth day of the bright formight of Magha.'
- In S 1819 expired, which by the southern luni-solar system was fivers, the full-moon title of Magha commenced 6 h. 52 m. after mean survise of Saturday, 15th January, A. D. 1695, and ended 5 h. 57 m. after mean survise of the following day.
- 132. S. 1714. Arch. Survey of South. India, Vol. IV. p. 42. Date of a stone inscription at Tirupparankunyam:—
- 'On . . . Wednesday, the fourth tithit of the month of Panguni in the year Paritapi, which was current after the 1714th clapsed year of the Salivahana Saka, and on the second day of the light formight in which the asterism of Bévati, the yôga named Sula, and the karana Palava-kurana were in conjunction.'
- In S. 1714 expired, which by the southern luni-solar system was Paridhavin, the month Panguni (7. e. the solar Chaitra) commenced, by the Sûrya-siddhânta, 14 h. 49 m., and by the Ârya-siddhânta, 11 h. 54 m. after mean surise of the 10th March, A. D. 1793; accordingly, by the Ârya-siddhânta, the fourth day of the solar month was Wednesday, 13th March, N. S., A. D. 1793. On this day the second tithi of the bright half (of the lunar Chaitra of the lunisolar Saka year 1715 expired) and the karana Bâlava commenced 3 h. 20 m., the nakshatra was Rêvatî from 8 h. 32 m., and the yôya Sukla up to 9 h. 47 m. after mean sunrise.
 - 2. Dates with Wrong Saka Years, but Correct Jovian Years.
- 139. S. 775. Ante, Vol. XIII. p. 134. Kanheri inscription of the Råshtrakûta Amôghavarsha I.:—
- (L. 1). Sakanripa-kāl-âtīta-samvatsara-śatēshu saptasu pamcha-saptatishv≔amkataḥ [api samva]tsaraśaḥ 775 tad-autarggata-Prajāpati-sasva(mva)tsar-ântaḥpāti-Âśvina-vahula-dvitīyâ-[yâm Budh 3]dinē.

By the southern luni-solar system Prajapati was 8.773 (not 775) expired, and by the mean-sign system Prajapati lasted from the 26th November, A. D. 850, to the 22nd November A. D. 851; and during this time (by both systems in 8.773 expired) the second tithi of the dark half of the amanta Aśvina ended 10 h. 29 m. after mean sunrise of Wednesday, 16th September, A. D. 851.

- 140. S. 1063. Ante, Vol. XII. p. 126. Anjanêri inscription of the Yâdav. Mahásámanta Scupadova: —
- (L. 1). Saka-samvat 1063 Dumdubhi-samvatsar-amtarggata-Jyêshtha-sudi pamcha-dasyam Sômê Anuradha-nakshatrê Siddha-yôgê asyam samvatsara-masa-paksha-divasa-aparvvayam tithau.

In the year Dundubhi, which by the southern luni-solar system was S. 1064 (not 1063) expired, the loth tith of the bright half of Jyaishtha ended 13 h. 32 m. after mean suurise of Monday, 11th May, A. D. 1142; and on this day the nakshatra was Anuradha ud to 13 h. 47 m., and the yoga Siddha from 2 h. 38 m. after mean sunrise.

A This should be 'day.' This should be 'tithi.'

F Compare also Nos. 149, 162, 183, 187 and 196, below.

^{*} This should be 'Sukla,'

- 141. S. 1128. Ep. Ind. Vol. I. p. 343. Pâțnâ inscription of the Dévagiri-Yadava Silicham II.: —
- L. 21). Sri-Sakê 1128 Prabhava-samvatsarê Srâvaņa-māsê paurņņamāsyām chamdra-grahana-samayē.

In the year Prabhava, which by the southern luni-solar system was S. 1129 (not 1128) expired, the full-moon tithi of Sravana ended 11 h. 30 m. after mean sunrise of the 9th August, A. D. 1297, when there was a lunar eclipse, visible in India.

142. — S. 1444. — Páll, Skr. and Old-Kan. Inscr. No. 27; Mysore Inscr. No. 135, p. 245. Simoggâ copper-plate inscription of Krishnarâya of Vijayanagara: —

'Salivahana-Saka 1444 (in words; 1.5 of the fourth side), the Svabhanu sanivatsara; Tuesday, in the month Pashya; at the time of the Makara-sankrama...; under the constellation Hasta.'

In the year Subhanu, which by the southern luni-solar system was S. 1445 (not 1444) expired, the Makara-samkranti took place 18 h. 1 m. after mean sunrise of Monday, 28th December, A. D. 1523, while the moon was in Hasta; and on the following day, Tuesday, the 29th December, the 8th tithi of the dark half of Pausha ended 21 h. 42 m. after mean sunrise.

- 143. S. 1645. Mysore Inscr. No. 169, p. 318. Melkote copper-plate inscription of Krishmaraja of Maisur: —
- 'In . . . the Salivahana Saka, the year reckoned as bhûta, arnava, anga and kshiti (1645) having passed, and the year Krôdhi being current, in the month Pushya, the 12th day of the moon's decrease, Wednesday, under the constellation Anuradha, the Vriddhi yûga, the Balave karana, the uttarayana, the sun being in Makara,— on this auspicious day, in the morning.'

In the year Krodhin, which by the southern luni-solar system was S. 1646 (not 1645) expired, the Uttarayana-samkranti took place 18 h. 16 m. after mean sunrise of Tuesday, 29th December, A. D. 1724; and the 12th tithi of the dark half of the amanta Pausha commenced (and the karana Bâlava ended) 3 h. 20 m. after mean sunrise of Wednesday, 30th December, A. D. 1724, when the nakshatra was Anuradha up to 11 h. 10 m., and the yôga Vriddhi from 3 h. 56 m. after mean sunrise.

3. - Dates with Wrong Months.9

144. - S. 872. — Jour. Bo. As. Soc. Vol. XI. p. 245. Date of a grant commemorated in an inscription at Narégal:—

'On the occasion of an eclipse of the sun on Thursday, the day of the new moon of the month Kârttika of the Sadharana samuatsara, being the year of the Saka 872.'

In S. 872 expired, which by the southern luni-solar system was Sådhårana, the 15th tithi of the dark half of the amanta Karttika ended 13 h. 53 m. after mean sunrise of Tuesday, 12th November, A. D. 950, when there was no eclipse. But there was a total solar eclipse, not visible in India, at sunrise of Thursday, 12th December, A. D. 950, which was the 15th of the dark half of the following month, the amanta Margatirsha. [By the mean-sign system Sådhårana ended on the 30th September, A. D. 949.]

145. — S. 1096. — Jour. Bo. As. Soc. Vol. XVIII. p. 275. Belgaum District copper-plate inscription of the Kalachuri Sômésvara:—

(Plate iid, l. 20). — Shannavaty-adhika-sahasratamê Sakê Jaya-samvatsarê Kârttika-śnkla-dvâdaśyâm Brihaspativara-Bêvatinakshatra-Vyatipātayôga-Va(ba)vakarana-yuktâyâm.

Perhape 'Bâlava' may be an error for 'Kaulaya,' the kweese which follows immediately upon Bâlava.

Compare also No. 156, below.

In S. 1096 expired, which by the southern luni-solar system was Jaya, the 12th tithi of the bright half of Karttika ended 12 h. 24 m., and the karana Bava about one hour after mean sources of Wednesday, 4th October, A. D. 1174, and on this day the nakshatra was Parva-blandrapada, and the yiga Vyāghāta. But the 12th tithi of the bright half of the following month. Margasirsha, ended 21 h. 6 m., and the karana Bava about 9 h. after mean sunrise of Thursday, 7th November, A. D. 1174; and on this day the nakshatra was Révati up to 13 h. 8 m. after mean sunrise, and the yiga Vyatipāta about the whole day. [The date No. 69, above, from an inscription of the same king, shews that the 15th of the dark half of Mārgašīrsha of S. 19th expired corresponded to the 26th November, A. D. 1174. And it may be added that, calculated by Prof. Jacobi's Special Tables, Kārttika was not intercalary in S. 1096 expired.]

146. — S. 1353. — Hultzsch, South Ind. Inser. Vol. I. p. 80. Date of an inscription on the base of the İsvara temple at Tellûr near Völür:—

'On the day of (the nakshatra) Tiruvonam (i. e. Sravana), which corresponds to Monday, the tifth lunar day of the former half of the month of Karkataka of the Sadharana year (and) the Saka year 1353.'

In S. 1353 current, which by the southern luni-solar system was Sådhårana, the sun was in the sign Karkata from 23 h. 13 m. after mean sunrise of the 28th June to 10 h. 30 m. after mean sunrise of the 30th July, A. D. 1430. During this time there was only one 5th tithi of the bright half, and this tithi ended 17 h. 34 m. after mean sunrise of Tuesday, the 25th July, when the moon was in Hasta (No. 13), not in Sravana (No. 22). — In S. 1353 current, the year of the date, the only fifth of the bright half on which the moon was in Sravana was Monday, the 20th November, A. D. 1430, which was the 5th of the bright half of the lunar Margasirsha and the 22nd day of the solar Margasirsha. Now, as the solar Margasirsha of the north would in the south be called the month of Karttigai, I believe the word Karka! aka of the date to have been erroneously put for Karttigai.

4. - Dates with Wrong Tithis.

147. — S. 902. — Jour. Bo. As. Soc. Vol. X. p. 210; ante, Vol. XII. p. 209, No. 11. Saundatti inscription of the Western Châlukya Taila II.:—

Sa(śa)kan; ipa-kûl-âtîta-samvatsara-śatamga[l*] 902neya Vikrama-samvatsarada Paushya-(sha)-śuddha-daśamî-Brihaspativārad-amdin=uttarāyaṇa-ba(sa)mkramaṇado].

In 8. 902 expired, which by the southern luni-solar system was Vikrama, the Utta-rayana-sankranti took place 5 h. 54 m. after mean sunrise of Thursday, 23rd December, A. D. 980; and on the same day the 14th (not the 10th) tithi of the bright half of Pausha ended 11 h. 37 m. after mean sunrise. [By the mean-sign system Vikrama ended on the 27th May, A. D. 979, in 8. 902 current.]

148. — S. 966. — Ante, Vol. XII. p. 209, No. 14. Hûli inscription of the Western Châlukya Sûmêsvara I.:—

Sakanripa-kûl-ûtîta-samvatsara-satangalu 966neya **Târana-sam**vatsarada Pusya(shya) sa(su)-dhdha(ddha) 10 **Adivarama-(u)ttarayana-samkrantiy-amd**u.

In S. 966 expired, which by the southern luni-solar system was Târana, the Uttarâ-yana-samkrânti took place 19 h. 21 m. after mean sunrise of Sunday, 23rd December, A. D. 1044; and on the same day the first (not the 10th) tithi¹⁰ of the bright half of Pausha ended 7 h. 1 m. after mean sunrise.

³⁶ In the text of Rimbunjishkryn's Hésans at Szavana-Belgoja, printed onte, Vol. XIV. p. 284, the tithi of the date in the first (1); but according to the text (not the translation) published by the same editor in Inscriptions at Brownet-Belgoja, p. 100, Mo. 136, the tithi is the tenth (10). Here my calculation shows this latter reading (10) to be surrest. Company also below, No. 136.

149. — 8. 1317. — As. Res. Vol. IX. p. 429; Colebrooke's Miv. Essays, Vol. II. p. 264. Chitradurg copper-plate inscription of Harihara II. of Vijavanagara:—

Rishi-bhû-vahni-chandrê tu garitê Dhât[ri]-vatsarê l Mûgha-mûsê śukla-pakshê paurnamûsyûm mahûtithan li nakshatrê pitri-daiyatyê Bhânuyarêna samyutê l

In the year Dhatri, which by the southern luni-solar system was S. 1318 (not 1317) expired, the full-moon tithi of Magha ended 3 h. 20 m. before mean sunrise of Sunday, 14th January, A. D. 1397; but the day of the date is evidently this Sunday, the first of the dark half, on which the moon was in the pitri-nakshatra, i. e. Magha, by the Brahma-siddhanta, from 2 h. 38 m., and, by the Garga-siddhanta, from 5 h. 16 m. after mean sunrise.

- 22nd February, A. D. 445. [By the mean-sign system Tarana lasted from the 10th August, A. D. 448 (in S. 379 expired), to the 6th August, A. D. 449 (in S. 371 expired).]
- 164. S. 411. Aute, Vol. VII. p. 212. British Museum forged copper-plate inscription of the Early Chalukya Pulikésin I.:—
- (L. 28). Sakanrip-àbdêshv=êkâdaś-ôttarêshu chatuś-śatêshu vyatîtêshu Vibhava-sam-vatsarê pravarttamânê . . . Vaišákh-ôdita-pûrana-punya-divasê Bâhô(hau) vidhau(dhôr=) mandajam slêshţē(?).
- In S. 411 current, which by the southern luni-solar system would be Vibhava, there was a lunar eclipse, not visible in India, 2 h. 38 m. after mean sunvise of the 12th April, A. D. 488, the full-moon day of Vaisakha. [By the mean-sign system Vibhava lasted from the 6th February, A. D. 492 (in S. 413 expired), to the 1st February, A. D. 493 (in S. 414 expired).]
- 165.— S. 417. Ante, Vol. XIII. p. 117; and Vol. XVIII. pp. 92 and 286. Ilâô copperplate inscription of the Gurjara Dadda II. Praśântarâga:—
- (L. 18). Sakanripa-kâl-âtîta-samvachchha(tsa)ra-ŝata-chatushṭayô saptadaś-âdhikê Yê-(jyê)shṭh-[â*]wîsy[â*]-su(sû)ryagrāhê.
- In S. 417 current the new-moon tithi of the pārņimānta Jyaishtha ended on the 21st April, A. D. 494, and that of the aminta Jyaishtha on the 20th May, A. D. 494; on neither day was there a solar eclipse. For S. 417 expired the corresponding days are the 10th May, A. D. 495, when there was a solar eclipse, 9 h. 42 m. after mean suurise, and the 8th June, A. D. 495, when there also was a solar eclipse, 16 h. 41 m. after mean suurise; both these eclipses were invisible.
 - 8. Select Irregular Dates, not given above.
- 166. S. 169. Ante, Vol. VIII. p. 213, and Vol. XVII. p. 241. Tanjore copper-plate inscription of the Western Gaign king Arivarman (Harivarman):—
- (L. 10). Sa(śa)kā(ka)-kālê nav-ôttara-shashṭir=êka-śata-gatêshu Prabhava-samvatsar-àbhyantarê Shā(Phā)lguṇ-âmāvāsô(syā)-Bhṛigu[varê*] Rêvati(tî)-nakshatrê Vṛiddhi-yôgê Vṛishabha-lagnê.

By the southern luni-solar system Prabhava would be S. 169 expired. As shewn by 19r. Fleet, the new-moon tithi of Phalguna did not end on a Kriday, either in S. 169 expired or in S. 169 current. In S. 169 expired with the paraimetra scheme of the month, it commenced about 3 h. 15 m. after mean survise of Friday, 11th February, A. D. 248; but the nakshatra then was Satublishaj (No. 24), not Révati (No. 27); and the yôga was Siddha (No. 21), not Vriddhi (No. 11). [By the mean-sign system Prabhava lasted from the 20th November, A. D. 253 (in S. 175 expired), to the 16th November, A. D. 254 (in S. 176 expired).]

- 167. S. 261. Ante, Vol. XV. p. 175, and Vol. XVII. p. 239. Mudyanûr copper-plate inscription of the Bâça king Srivadhûvallabha-Malladêva-Naudivarman:—
- (L. 23). Ékashashty-uttara-dvaya-satê 'Sak-âbdah pravarddhamân-ûtmanalı trayôvimsati varttamâna-Vilambi-samvatsarê Kârttikâ(ka)-sukla-pakshê¹⁴ trayôdasyâm Sômavarê Abvinyâm nakshatrê.
- In S. 261 current, which by the southern Iuni-solar system would be Vilamba, the 13th tithi of the bright half of Kärttika ended on Friday, 13th October, A. D. 338, when the nakshatras were Bëvati and Asvini. And in S. 261 expired the same tithi occupied about the whole of Wednesday, 31st October, A. D. 339, when the nakshatras were Asvini and Bharani. [By the mean-sign system Vilamba lasted from the 1st November A. D. 343 (in S. 265 expired), to the 37th October, A. D. 344 (in S. 266 expired).]

^{*} That the intended reading is Tortitha inklapaksho, not Rortith disklapaksho, is shown by the nakshatra quoted in the date.

- 168. S. 261. Ante, Vol. XVIII. p. 311. Spurious date in the Kalbhavi Jain inscription:—
- (L. 14). Saka-varsha 261 neya Vibhava-samvatsarada Paushya(sha)-bahula-chatur-ddasi-Somavaram=uttarayana-samkrantiy-amdu.

By the southern luni-solar system S. 261 current would be Vilamba, and S. 261 expired Vikârin, — not Vibhava, which would be S. 230 expired. And by the mean-sign system the year Vibhava, nearest to S. 261, lasted from the 8th March, A. D. 314 (in S. 236 expired), to the 4th March, A. D. 315 (in S. 237 expired). This proves the wording of the date to be quite incorrect; and Dr. Fleet, loc cit. pp. 310, 311, has taken the trouble to shew that the date does not in any way work out satisfactorily for any one of the Saka years mentioned.

- 169. S. (?) 388. Ante, Vol. I. p. 363; Mysore Inscr. No. 151, p. 283; Coorg Inscr. No. 1, p. 3. Merkara copper-plate inscription of the Western Gauga king Avinita-Kongani:—
- (L. 16). Ashta asiti uttarasya trayô satasya samvatsarasya Mâgha-mâsam Sômavaram Svati-nakshatra suddha-pañchami.

In S. 388 current the 5th tithi of the bright half of Mågha ended on Friday, 7th January, A. D. 466, when the nakshatra was Uttara-bhadrapadå (No. 26), not Svåti (No. 15). And in S. 388 expired the same tithi ended on Wednesday, 28th December, A. D. 466, when the nakshatra also was Uttara-bhadrapadå.

- 170. S. 415. Ante, Vol. XVII. p. 200, and Vol. XVIII. p. 92. Bagumrâ copper-plate inscription of the Gurjara Dadda II. Praśântarâga:—
- (L. 21). Sakanripa-kâl-âtîta-samva[chchha(tsa)]ra-ŝata-chatushṭayê pamchadaś-âdhikê Yê(iyê)shṭh-[â]mâvâsya-su(sû)ryagrahê.

In S. 415 current the new-moon tithi of Jyaishtha ended, by the purpindnta scheme, on the 12th May, A. D. 492; and, by the amanta scheme, on the 10th June, A. D. 492; and for S. 415 expired the corresponding days are the 1st May, A. D. 493, and the 31st May, A. D. 493. On none of these days was there a solar eclipse. There was an invisible solar eclipse on the 10th July, A. D. 492; and one, which was invisible in India, on the 29th June, A. D. 493.

171. — S. 684. — Mysore Inscr. No. 152, p. 286. Hosûr copper-plate inscription of the Western Gaiga king Prithuvî-Kongani:—

Chaturasity-uttarêshu shatchhatêshu Saka-varshêshu samatitêshu Vaisakha-masê somagrahanê Visakha-nakshatrê Sukravarê.

In S. 684 expired the full-moon tithi of Vaisakha ended on Tuesday, 13th April, A. D. 762; and in S. 684 current it ended 0 h. 13 m. after mean sunrise of Friday, 24th April, A. D. 761, on which day the moon was in the nakshatras Svâti and Visakha. On neither day was there a lunar eclipse; nor was there one on a Friday in A. D. 760 or A. D. 763.

- 172. S. 730. Ante, Vol. XI. p. 159, Vol. XVI. p. 74. Wanî copper-plate inscription of the Râshṭrakûṭa Gôvinda III. :—
- (L. 46). Sakanripa-kâl-âtâta-samvatsara-śatêshu saptasu tri(tri)mśad-adhikêshu Vyaya-samvatsarê Vajśâkha-sita-paurņamâsî-somagrahana-mahāparvvani.

The year Vyaya, by the mean-sign system, lasted from the 4th June, A. D. 806, to the 31st May, A. D. 807, and was therefore current at the commencement of 8. 730 current; and by the southern luni-solar system Vyaya would be S. 728 expired. The full-moon tiths of Vaisakha ended, in S. 728 expired, when Vaisakha was intercalary, on the 6th April and the 6th May, A. D. 806; in S. 729 expired (= S. 730 current), on the 25th April, A. D. 807; and in S. 730 expired, on the 14th April, A. D. 808. On none of these days was there a lunar eclipse. [In A. D. 805 there was only one lunar eclipse, in September; and in A. D. 809 there was none from February to June.]

- In S. 970 expired, which by the southern luni-solar system was Sarvadharin, the 13th tithi of the bright half of Jyaishtha ended 12 h. 24 m. after mean sunrise of Saturday, 28th May, A. D. 1048. The 13th tithi of the dark half of the same (amanta) month ended on Sunday, 12th June, A. D. 1048.
- 182. S. 991. Ante, Vol. XII. p. 120. Bassein copper-plate inscription of the Yadava Seunachandra II.: —
- (L. 24). Sa(śa)ku-samvat ékanavaty-adhika-nava-sa(śa)têshu samvat 991 Saumya-samvatsariva-Srâvana-sudi chaturdāsvam(śvám) Guru-dinê.
- In S. 991 expired, which by the southern luni-solar system was Saumya, the 14th tithi of the bright half of Sravana ended 14 h. after mean sunrise of Tuesday, 4th August, A. D. 1069.
- 183. S. 1008. From an impression supplied to me by Dr. Fleet. Sîtâbaldî inscription of the Western Châlukya Vikramâditya VI.: —
- (L. 1). Sa(śa)kanripa-kâl-âtîta-samvvatsar-âmtarggata-daśaśata ya[tra] ashṭatyadhikê (altered to ashṭâdhikê) saku 1008 Prabhava-samvatsarê Vaisà(śâ)kha-su(śu)dha(ddha)-tritîyâ-Su(śu)kradinė.

In the year **Prabhava**, which by the southern luni-solar system was **S.** 1009 (not 1008) expired, the third tithi of the bright half of Vaisakha ended 16 h. 9 m. after mean sunrise of Thursday, 8th April, A. D. 1087. In S. 1008 expired the same tithi ended on Sunday, 19th April, A. D. 1086; and in S. 1008 current on Monday, 31st March, A. D. 1085.

- 184. S. 1056. Ante, Vol. XIV. p. 58, and Vol. XX. p. 191. Chittûr copper-plate inscription of the Eastern Chalukya Kulôttunga-Chôḍadêva II.:—
- (L. 49). Sâk-âbdânâm pramâṇê rasa-viśikha-viyach-chamdra-samkhyâm prayâtê s-Ârdra-rkshê pûrvva-ma(pa)kshê vi¹sahuvati sutithâ(thau).
- In S. 1056 current the Mêsha-vishuvat-samkrânti took place on the 24th March, A. D. 1133, the 2nd of the dark half of Chaitra, when the nakshatra was Svâti (No. 15), not Ârdrâ (No. 6); and the Tulà-vishuvat-samkrânti took place on the 27th September, A. D. 1133, the 12th of the dark half of Âśvina, when the nakshatra was Pûrva-phalguni (No. 11). And for S. 1056 expired the corresponding days are the 24th March, A. D. 1134, the 12th of the dark half of Chaitra, with the nakshatra Pûrva-bhadrapadâ (No. 25); and the 27th September, A. D. 1134, the 8th of the bright half of Âśvina, with the nakshatra Uttarâshâdhâ (No. 21). According to Mr. Dîkshit, the nearest year which would satisfy the requirements of the date is S. 1054 expired; for in that year the Mêsha-vishuvat-samkrânti took place 22 h. 3 m. after mean sunrise of the 23rd March, A. D. 1132, during the 6th tithi of the bright half of Chaitra, and the moon entered the nakshatra Ârdrâ about 5 h. 16 m. after mean sunrise of the 24th March, A. D. 1132.
- 185.— S. 1060. Mysore Inscr. No. 174, p. 333. Sindigere inscription of the time of the Hoysala Vishnuvardhana:—

'The Saka year 1060, the year Pingala, the month Pushya, the 10th day of the moon's increase, Sunday, uttarayana-samkranti.'

In 8.1060 current, which by the southern luni-solar system was Pingala, the Utta-râyana-samkrânti took place 20 h. 54 m. after mean sunrise of Friday, 24th December, A. D. 1137, during the 11th tithi of the bright half, which ended 22 h. 14 m. after mean sunrise of the same day.

186.— S. 1086. — Páli, Slor. and Old-Kan. Inscr. No. 96. Date in a Miraj inscription of the Silâhâra Vijayûditya:—

'Saka 1066 (in figures, 1.47), the Rudhirodgari saskvateara; Vaddavara, the fourteenth day of the dark fortnight of Magha.'

¹⁸ The aksharas from dra to vi are engraved over a cancelled passage.

- In S. 1066 current, which by the southern luni-solar system was Rudhirodgarin, the 14th tithi of the dark half of the aminta Magha ended 13 h. 11 m. after mean sunrise of Friday, 4th February, A. D. 1144; and in S. 1066 expired the same tithi ended 20 h. 33 m. after mean sunrise of Tuesday, 23rd January, A. D. 1145.
- 187. S. 1084. Jour. Bo. As. Soc. Vol. XI. p. 273. Pattadakal inscription of the time of the Sinda Châvuṇḍa II., the subordinate of the Western Châlukya Taila III. :—
- 'On a holy lunar day which combined a vyatipáta with an eclipse of the moon, on Monday, the day of the full-moon of the bright fortnight of the month Jyêshtha of the Subhanu santvatsura, which was the year of the Saka one thousand and eighty-four.'

In the year Subhanu, which by the southern luni-solar system was S. 1085 (not 1084) expired, the full-moon tithi of Jyaishtha ended about 20 h. after mean sunrise of Sunday, 19th May, A. D. 1163, (with the yôya Siddha). In S. 1084 expired the same tithi ended on Wednesday, 30th May, A. D. 1162 (with the yôya Sukla); and in S. 1084 current on Thursday, 11th May, A. D. 1161 (with the yôya Siddha). On none of these days was there a lunar eclipse.

- In S. 1276 current, which by the southern luni-solar system was Vijaya, the full-moon tithi of Magha ended 5 h. 53 m. after mean sunrise of Saturday, 8th February, A. D. 1354. In S. 1276 expired the same tithi ended 22 h. 11 m. after mean sunrise of Wednesday, 28th January, A. D. 1355. On neither day was there a lunar eclipse.
- 198. S. 1377. Ante, Vol. XX. p. 391. Copper-plate inscription of Ganadeva of Kondavida (a contemporary of Kapila, the Gajapati king of Orissa):—
- (L. 29). Sâkê śaila-turamgam-âgni-śaśi-samkhyātê Yuv-âbdê śubhê . . . Bhâdrapadê vidhōr-sraha-dinê.
- In S. 1377 expired, which by the southern luni-solar system was Yuvan, the full-moon tithi of Bhâdrapada ended on the 27th August, A. D. 1455. In S. 1377 current the same tithi ended on the 7th September, A. D. 1454. On neither day was there a huar eclipse.
- 199.— 3. 1478. From an impression supplied to me by Dr. Hultzsch. Chingleput copper-plate inscription of Sadžiiva of Vijayansgara:—
 - (L. 120). Kramåd=vasu-hay-åbdh-lindu-gaņitē Saka-vatsarē !

 Waļa-sainvatsarē māsi Mārgaširsha iti śrutē !

 sūry-oparāgē=māvāsyā-tithā(thau) Mārttāinḍa-vāsarē !
- In S. 1478 expired, which by the southern luni-solar system was Nala (Anala), the new-moon tithi of the amanta Mârgasîrsha ended on, and occupied nearly the whole of, Tuesday, 1st December, A. D. 1556, when there was no eclipse. But there was a solar eclipse, visible in India, 6 h. 15 m. after mean sunrise of Monday, 2nd November, A. D. 1556, which was the new-moon day of the amanta Kârttika (or puriminata Mârgasîrsha).
- 200. S. 1497. Hultzsch, South Ind. Inser. Vol. L. p. 74. Date of an inscription at Sattuvächcheri near Velür:—
- 'On Wednesday, the thirteenth lunar day of the dark half of the month of Makara, of the Yuva-sanoatsura, which was current after the Saka year 1497 (had passed).'
- In S. 1497 expired, which by the southern luni-solar system was Yuwan, the sun was in Makara from 4 h. 57 m. after mean sunrise of the 29th December, A. D. 1575, to 15 h. 51 m. after mean sunrise of the 27th January, A. D. 1576. During this time there was one 13th tithi of the dark half, which lasted from shortly after sunrise of Thursday, the 29th December, A. D. 1575, to about the end of the same day.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.LE., I.C.S. (Continued from Vol. IXIII. p. 394.)

5. Articles which scare Spirits.

Among the articles which, because they cured diseases, were believed to be spirit-scarers, four of chief importance, fire, water, iron and urine, require special consideration. The rest may be taken in alphabetical order.

Fire: - The article which, perhaps more than any other, shows its pow, over spirits, by dright out the demon of senselessness and fainting, and by curing severe pains and acute attacks and seizures, is fire, the actual cautery, or application of the burning brand, the red-hot iron, or the heated stone. Fire as a fiend-scarer seems to be the root of the worship of fire and of the worship of the sun, the fire of the world.

In almost all their ceremonies the Hindus give a leading place to fire - either to the sacred' fire or to lamps. Fires are lit at the time of birth to frighten spirits; at the threadgirding the sacred fire is kindled, and ought to be always kept alive; a fire is carried before the head bedr. even when the body is to be buried; and the waving of lamps to scare spirits is a whief invocation in marriage ceremonies, in the worship of the gods, and in acts of welcome.

The Prabhûs of Bombay keep a lampburning near the face of a new-born child for a month. or at least for ten days. Similarly, among the high-class Bombay Hindus, until a child is six mouths old, daily in the evening a lighted lamp is waved round its face, in order that it may not be blighted by the evil eye,2 Among the Beni-Isra'ils of Poona, after child-birth, a cimly burning brass lamp is placed near the child's face,3 The Râmôsîs and the Telugu Nhavis of Poons carry fire in front of a dead body, though they bury and apparently make no use of the fire.4 The Poona Halalkhors scoop a small hole in the grave in front of a dead body, and keep a lighted lamp in the hole.5 The Bhôis of Ahmadnagar, who bury their dead, carry a fire-pot in front of the body, and the Ahmadnagar Mhars keep a lighted lamp burning night and day in a lying-in room for the first twelve days.7 The Kôlis of Ahmaduagar when they are much annoyed by rheumatic pains in the months of December and January, cure them by cautery and by burning turmeric.8 Among the Belgaum Kôrvîs, an early tribe, when a woman is taken in adultery, she is put out of caste and not allowed back, till three millet stalks have been burnt over her head and her tongue has been branded with hot gold.9 The Pâtradavarus, or Dhârwâr dancing girls, heat a needle and touch a new-born babe on the head, shoulders, chest, palms and soles to keep off sickness.10 In Dhârwâr the Gôndhalîs. in worshipping Bhavani, touch their bodies with lighted torches, and the Vaishnayas have their bodies branded with a red-hot copper, or with a gold seal bearing the discus or shell of Vishnu.11 In the month of Kartik (November) high-class Hindus hang lamps in the open air. In Kanara (1700) the girl who walked in front of the hook-swinging car carried a pot of fire on her head.12 In South Kanara women walk barefoot on red-hot coals to be cured of barrenness caused by spirit possession.13 Among the Batadarus, or Bakadarus, of North Kanara, if a woman has a paramour her husband puts her away, the paramour builds her a hut, and she goes to it: he sets the but on fire, and she flies: after this burning out is repeated in eight different villages, the woman is pure.14 In Kânara, when a Brâhman has committed such a sin or caste-offence, as having connection with a forbidden caste, -to purify him burning straw is held, and sometimes fastened, on his body.15 The Karnatak Südras keep a lamp burning in the booth during marriage.16 and the Tirgul Brahmans of the Karnatak burn a lamp in the lying-in room for three months after a birth.17 The Oraons of Chutia Nagpur keep a fire burning for tifteen days after child-birth.18 The Orions also burn marks on the fore-arm.19 Khonds a hot sickle covered with a wet cloth is a favourite cure.20 In Southern India every man who goes out at night carries a brand with him. Sometimes, even in broad day,

¹ At all Hindu susshirs or ceremonies a sacred fire is kindled. These sacred fires are known by different names. Thus the birth-fire is mongal, the lucky, and the death-fire is knowled, the flesh-eater.

Hindus light lamps to keep devil, off,21 The ceremony of ranning through five is mentioned in a Hindy account of Malabar,22. The principal object of Vedic worship is fire, or solar fire, 22 Among the Hindus, in performing the said-dha ceremony, a lamp is kept lighted to drive a any evil spirits: the lamp is called rakshophna, the destroyer of demons.24 According to Ward, Hindus used to walk over fire in honour of Siva,25 In India violent sicknesses are cared by applying burning iron to the feet.26

Great fear of spirits seems to be the origin of the Persian worship of fire. Light and fire terrify all that is evil.27 So the Supreme addresses Zoroaster from the midst of a circle of fire.28 Fire and water are the two pure elements, because they make pure by driving away evil spirits.29 The second most joyful land is where fire is placed.30 The Persians worshipped the sun as the mightiest light, being thus the greatest terror to evil spirits.21 The Parsis light a fire for the dead.32 In January (sixteenth of Bahman) the old Persians lighted great fires.33

The Jews had a sacred fire or altar at Jerusalem.34 Lamps were kept burning in Egyptian and Roman tombs.35 In Central Ceylon visitors enter a house between lamps. lighted and set on each side of the threshold to keep evil spirits from coming in.36 The Nintiras of the Malay Peninsula put the mother near a fire to keep off spirits,37 and other tribes pass the new-born child over fire.38

The Karens of Burma set a burning torch at each end of the back-bone, or other bone, kept as a memorial, and walk round the bone in procession.39 The Chinese let off crackers on the Chinese New-year's Day to frighten evil spirits, 40 and crackers are often fired from Chinese boats to dispel evil influences.41 At their weddings the Chinese hold lighted torches before the bride. even at noon-day.42 In August, on the full-moon day, the Japanese hold a feast of lanterns, when they light the graves of the dead.43 In Central Asia to spit on fire is a sin. To blow out a light is a breach of manners among the Kirghis of Central Asia.44 In Turkistân, for eight days after a birth, a lamp is kept burning near the child to keep off the evil eye.45 The Tartars pass the staffs of the dead between two fires.46

In Melanesia no one goes out at night for fear of spirits without a light, which ghosts fear.47 In Polynesia the only fire that is allowed at night is a light in the lying-in room.48 When they have no liquor to offer the gods, the Samoan Islanders raise a bright fire at the evening meal, and call on the family gods to help, and on the gods of the sea to pass over the land, and take its diseases away with them. 49 The Philippine islanders bury the dead in the fields, and, for many days, keep fires burning in the dead man's house, that he may not come to take those that are left alive.50 Actual cautery is a common cure among the savage tribes of Polynesia: it is specially used to cure rheumatism. The Australians burn the skin with a lighted stick in grief for a chief or relation.51 Some wild Australian tribes believe in spirits or ghosts, and consider that fire keeps away spirits.52 The Australians burn large fires at the grave, sometimes for a month: the original reason is probably to scare the

spirit: the belief now is that it is out of kindness to the dead, who feels cold.⁵³ The Australians, who believe that the evil spirit Cienga prowls about at night, will not leave their fires.⁵⁴

In Madagascar, at the beginning of the new year, small bundles of dry grass are stened to the ends of bamboos, and then lighted and carried about the town. In Madagascar, on first leaving the house, the child is carried over a fire at the door. Fire doctors are famous in North Africa. The doctor generally keeps with him a little charcoal fire, bellows and irons. When a patient, thinking himself bewitched, comes to the doctor, he makes the patient lie down, and draws aside the clothes from his back, and heating his rod of iron red-hot he draws it with a hissing sound across the back and loins of the sick person in the name of God. In Morocco fire is applied to the temples, the neck and the part behind the ears to cure eye-disease. In Basutoland fires are burnt round the crops to keep off spirits, and if a child walks on a grave the mother lights a fire at its feet. When the Hottentot is away hunting, the wife kindles a fire. She watches it and does nothing else. If the fire goes out the husband has no luck. The Abyssinian Christians, according to Barbosa (1500-1514), had a baptism of fire, marking themselves on the temples and forehead with fire.

The South American Indians carry brands at night to keep off demons.⁶² In Mexico, on the fifth of the unlucky days that come every fourth year, people made their children pass through fire.⁶³ The King of Mexico was enthroned before the divine hearth.⁶⁴ Among the Greenlanders an old woman followed the corpse with a firebrand, saying, "there is nothing more to be got here."⁶⁵

Greek children were carried round fire. The Romans had a strong faith in the spirit-scaring power of fire. Nothing is so good in a pestilence as to kindle fires: 7 fire is the best cure for convalsions. In eclipses they threw fire-brands into the air to frighten the spirit which was cating the sun or the moon. They made their flocks and herds pass through fire, and the people leaped over fire. Roman mourners stepped across a fire. The unfading Vestal lamp was to keep off spirits. So when a candle went out, the smell of its snuff caused untimely travail. The torch was the symbol both of marriage and of death. Fire was placed at the door and touched by the newly married pair.

At Constantinople lamps continually burn round the sacred tomb of Eyûb.⁷⁵ In Sardinia in early spring the children leap through fires.⁷⁶ Formerly in Skandinavia sacred fire was kept burning night and day.⁷⁷ In Skandinavia, till a child is baptized the lamp must never go out, lest the trolls should steal the child. A live coal is thrown after a woman who is going to be churched, to prevent her being bewitched, and a live coal is also thrown after a witch when she leaves a house, that her familiar may not stay behind.⁷⁸ In Sweden it is believed that no one should take a child in his hands without first touching fire.⁷⁹ The Russian bishop waves candles over his congregations in the form of a cross.⁸⁰ The main duty of the Russian reader, the lowest rank of Russian clergy, is to hold a candle.⁸¹ In consecrating a Russian church each of the priests, deacons, and readers, and every member of the congregation holds a candle.⁸² In

```

Russia, on the 29th of August (1700), horses were passed through fire. 33 In Roman Catholic churches, at the time of baptism, a lighted candle is put into the child's hand. 44 Candles are lighted in the sick room, when the Roman Catholic priest gives the sick person the Sacrament. 55 In Germany a light is burnt in the lying-in room till the child is baptized. 56 The Pope every year, when he blesses the world from the balcony of St. Peter's at Rome, holds a lighted taper, and when a Cardinal curses the heretics, a bell tolls, and the Pope throws the taper among the people. 57 In Iceland fire is carried five times round the land to keep off evil spirits. 59

In Ireland, till 1700, people and cattle were passed through the Sun, or Beltine, Fires on Mayday and on Midsummer's Eve. Higgins says that children were passed through fire (1827), and when a cattle-disease broke out, a new fire was made and the cattle were passed through it. Fire was worshipped in Ireland and Scotland in 1596; and in the eighteenth century, after baptism, the child was passed thrice across a fire. On the leading Beltine, or Sun, days, that is on Mayday and on Midsummer's-day, fires were lighted and fire was carried round on poles to drive off disease and mischief. In West Scotland a great fire was lighted over a suicide's body. In Scotland (1790) farm servants used to go round the fields with torches to secure good crops. A fairy, or changling, child was burnt on the embers and the real child was restored. Witches feared fire, and were burned to death to destroy the familiar as well as the witch. Wax-tapers were essential in conjurations or exorcisms. The candles in Roman Catholic churches are consecrated, sprinkled with holy water, and incensed; and that the object of lighting church candles is to drive away evil spirits appears from the following lines from Naogeorgus' Popish Kingdom, f. 47:—

".... a wondrous force and might
Doth in these candles lie, which, if at any time they light,
No thunder in the skies be heard nor any devils spide,
Nor fearful sprites that walke by night,
Nor hurts of frost nor haile." 100

In England, candlesticks were held before Richard L. Martin in his History of the Western Islands, p. 116, says:—" In this island of Lewis there was an ancient custom to make a fiery circle about the houses, corn, and cattle, belonging to each particular family. A man carried fire in his right hand and went round. Fire was also carried around women before they are churched and about children until they be christianed. They told me this fire round was an effectual means to preserve both the mother and the infant from the power of evil spirits who are ready at such times to do mischief, and who sometimes carry away the infants and return them meagre skeletons." In 1845, in Inverness, a girl was hung over a fire to cure her of the sin of witchcraft. According to an old English belief, if a piece of the Candlemas (February 2nd) candle is kept till Christmas, the devil can do no harm in the house. On the twelfth day after Christmas (in Herefordshire, 1791), English farmers used to go and light bonfires near wheat fields. In Warwickshire (1790), candles were carried round a field to prevent the growth of tares, darnel, and other noisome weeds. In the last century fires were lighted in England to keep wheat crops from disease. On Firebrand Sunday, in England, peasants used to go to their fields with lighted torehes of straw to drive bad air from

the earth. On St. Blaze's Day, in England, people used to burn great fires on hills. In England, on Midsummer Eve people passed through fire to be free from agues. Deven now, in the north of England, fire is not allowed to go out on Holloweven, Midsummer Eve, Christmas Eve and New Year's Eve. This custom used to be observed for the prosperity of state and people, and to dispel every kind of evil. Candles are burnt in Roman Catholic churches with the object of scaring spirits. S

(To be continued.)

INDO-DANISH COINS.

T. M. BANGA CHARI AND T. DESIKA CHARI.

No authentic information exists regarding the history of the Danish Mint at Tranquebar, but as far as can be gathered, the Danes in India struck there no fewer than three hundred varieties of coins in lead, copper, silver and gold. It does not appear that there was any mint in the other Danish Settlements in India, viz., at Porto Novo, Serampore, or Balasore.

Out of the three hundred varieties above mentioned only about eighty can now be obtained in India. Many of these were published by us in 1888, and the rest have been recently dealt with by Dr. E. Hultzsch, Government Epigraphist, Bangalore. One remarkable piece, however, has hitherto remained unpublished, and that is the lead Cas of Frederick III. (A. D. 1648-70):—

Obv. - The crowned monogram of the king - F. 3.

Rev. - The Royal escutcheon of Denmark.

By far the oldest and the most difficult to obtain of the Tranquebar issues are those in lead; and when met with, they are so much oxidised, that it is scarcely possible to decipher the legend on them. Lead was coined into money only in the first three reigns, and the coinage commenced with Christian IV. in the year 1640; but the earliest lead coin bearing date, so far as we know, was of the year 1644. None of these lead issues bear on them the value of the coin, in this particular differing from the later copper coinage. The coins of Christian IV., indeed, have on them the legend Cas, but even then, the exact value is omitted. Unlike the copper issues also, the lead ones were of numerous varieties, not less than a dozen different kinds of coins being stated to have been struck in the reign of Frederick III. alone. Some of them afford a clue to the place of mintage, Tranquebar, by the presence on them of the letters D. B. or T. B., standing for Dansborg (the Fort at Tranquebar), or Tranquebar; and in the reign of Christian V. it appears to have been usual to insert on the coins the initials of the mint officer: thus, W. H. [van] K. [alnien].

It would be both a useful and an interesting enquiry to ascertain how it was that a metal so easily liable to decay as lead, came to be chosen as a medium of currency during the infancy of the Indo-Danish Settlement. That in early days there was a scarcity of this metal is evident from the records of the travellers who then visited India. The author of the Periplus mentions tin and lead among the imports of Baragasa⁵ (Bharôch) on the Western Coast, and of Nelkunda⁵ (conjectured by Col. Yule to have been between Kanetti and Kolum in Travancore). Sir Walter Elliott also refers to a passage in Pliny, where it is stated that "India has neither brass nor lead, receiving them in exchange for precious stones and pearls." The only ancient Hindu kingdom that is known to have possessed a lead currency was that of the Andhras, and Sir W. Elliott has suggested that the scarcity of lead in those days might afford some explanation for this peculiarity in the Andhra coinage.

 Huminesta Orientalia — Coine of Southern India, p. 22.
 Op. cit., loc. cit.

Coming to later times, we meet with a lead currency only with the advent of the several European powers in the East. The Indo-Portuguese are known to have coined lead money; and the English East India Company, in imitation of the Portuguese, obtained of Charles II. a charter authorizing them to coin, among others, 'budgrooks' (Port. basaracco), lead coins, which appear to have been issued by the English East India Company in the reign of Charles II. and in those of the first three Georges, for currency in the Settlement at Bombay. Whether the scarcity of lead, felt in the early centuries of the Christian era, continued up to so late a period as the 16th and 17th centuries, is not known; but it is not improbable that lead was still popular as a medium of currency, and it was perhaps to suit this taste of their customers that the earliest European Power in India, the Portuguese, struck lead coins. The English and the Indo-Danish Companies appear to have copied the Indo-Portuguese in this respect.

It is not known why this currency was subsequently abandoned, but it is remarkable that all the European powers began to give it up just about the same time.

Copper coins appear to have been issued from the Indo-Danish Mint for the first time in the reign of Frederick III., the earliest copper coin bearing date being of the year 1667 A. D.

The late Lieut.-General Pearse sent us a drawing of a large tutenag coin which he believed to have been issued in the reign of Christian IV. (1588-1648):—

Obv. — The crowned cipher of the king 4.

But we have not hitherto met with this, or any other tutenag coins from the Danish Mint.

As in the lead, so in the copper, coinage of Tranquebar, the exact value was not designated on the coins in the reigns of Frederick III. and Christian V., and the first attempt made at giving this was in the reign of Frederick IV. (1699-1730), who issued 10, 4 and 2 KAS pieces. This system continued till 1845, the date of the final cessation of the Danish Power in India.

None of the published lists, however, refer to, nor have we been able to obtain, X. KAS pieces of the reigns of Frederick V. (1746-1766), or of Christian VI. (1730-1746). But during the long reign of Christian VII. two types of X. KAS were issued. The earlier variety had on its obverse the double linked monogram of the king and on its reverse the monogram of the Dansk Asiatisk Compagni the with the date and value. The later variety had on its obverse the single crowned monogram and on the reverse the value and the date.

Likewise there were two varieties of IV. KAS, both bearing on their obverse the monogram \mathcal{C} . On the reverse of the earlier variety were figured the monogram of the Company and the date and the value, but on that of the later variety the date and value alone appeared without the monogram. When this change took place, and whether it pointed to a total release of all their claims by the Danish Company in the East Indian Danish Settlements in favor of the Crown, are matters as to which it is not possible to obtain any exact information.

From 1808 to 1814, the Fort and Town of Tranquebar were, owing to hostilities between the mother countries, taken possession of and retained by the Madras Army. During this period no coins at all were issued, the Danes having naturally suspended operations. Tranquebar was restored to the Danish Power in 1814.

Silver coins began to be struck in the reign of Christian V. (1670-1699), and the earliest known coins are the five and two fanos of 1683. The silver currency thus started in fanos,

⁷ History of the Coinage of the East India Company (Government Press, Madras), by Edgar Thurston, Eaq., pp. 16 and 17-

^{*} Ibid. pp. 19, 25, 26 and 38.

conformably to the then popular monetary system of India, was superseded in 1755, by the introduction of the one and two royaliner. The change was, however, only nominal, the value of the royalin continuing to be nearly equal to one-eighth of a rupee. In 1816 a return was made to the old nomenclature fanos, which continued till 1818, from which year, the Danish Mint ceased to coin silver.

So far as we know, there were no Indo-Danish gold fanams, and the only gold coin that appears to have been struck was the pagoda of Christian VII.:--

Obv. - The crowned monogram of the king 6 on a granulated surface.

Rev. - An Indian idol.

From the description given of it in the accompanying list of the Copenhagen Collection, it appears that the pageda of Christian VII. must have resembled in appearance and size the earlier variety of the Star Pageda (*Pulivaráhan*) of the English East India Company.

Another gold coin is mentioned in the Copenhagen Royal Coin Cabinet Catalogue :-

Obv. - The crowned monogram of the king ?.

Rev. — 7, the Persian initial, of Haidar, so familiar to collectors of Mysore coins of the Muhammadan Usurpation period.

This coin is of very great interest, as tending to shew that the Danish power in the East did homage to the Mysore Usurper, consistently with the unambitious policy of peace adopted by them in their dealings with the dominant Indian Powers.

We now append a list of the Indo-Danish coins in the Boyal Coin Cabinet, Denmark, probably the largest known collection of these coins. The list was furnished in March 1884, by Mr. C. F. Herbert, Inspector of the Royal Coin Cabinet at Copenhagen, to the late Lieut.-General Pearse, who kindly placed at our disposal his notes on Indo-Danish coins, including the list. Both have been of material help in the preparation of this paper.

Coins of the Danish Colony in East India (Tranquebar).

(B. signifies the work Beskrivelse over danske Mynter og Medailler i den Kgl Samling. Kjöbenhavn, 1791, in folio, in which many of the coins are engraved.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., I.C.S.

(Continued from p. 22.)

(b) Water.

EXT to fire in power of driving away spirits comes water. Water drives off the spirit of thirst; it refreshes the fainting; it restores life to those in a swoon. On this power over diseases, - that is over evil spirits, - the claim of water as the great purifier seems to rest. The endless bathing of the high class Hindu has its root in the necessity for scaring evil spirits, not in the desire for personal cleanliness. The throwing of water at great ceremonics, and the washing of the feet before entering a house, seem to be done with the object of driving off spirits.14 The worship of sacred rivers and pools has the same object.15 Among the Thana Vadvals, when a child is supposed to be affected by the evil eye, water and salt are waved round its face and thrown away.16 Among the Khonds, if a woman is possessed by the spirit of barrenness, she goes to where two streams meet, and is sprinkled with water 17 So water is poured into the mouth of the dying Khond - originally it would seem to keep the spirit from coming back, now apparently to keep evil spirits from entering the dead body. A part of the belief that spirits fear water is that spirits cannot pass through water. This seems to be the original reason for the Brahman practice of sprinkling water round their dishes before eating; of the Maratha practice of throwing the stone of life backwards into a pool of water, and of the more general practice of carrying the ashes into a river. or into the sea. So gods, whose festival is over, are borne into deep water and left there. So Hindus troubled with a disease make tiny ships, fill them with offerings, and set them to sea that the disease spirit may start in the boat, and may not return. 18 The belief in holy water is wide-spread in India. The Jews have holy water in their temples, and among many classes water, which has been touched by the religious teacher, or in which the salagram stone has been dipped, is believed to have special purifying powers. In Western India, no orthodox Brâhman begins his meal, until he had thrice sipped water in which a idlagram stone has been washed.19 The Kanara Burnds are visited by their Lingavat priest on the Śrâvan (July-August) new moon. In each house the priest's feet are washed, and the water is drunk by the household, each of whom receives a gift of cow-dung ashes. Among the Kanara Satarkars, on the fourth day after a birth and on the third day after a death, the family is cleansed by water brought from the family priest.20 The Kathkars, an early tribe in Kinera.

Examples of throwing or scattering water at great coremonies are given in the text below. Three may, however, he recorded here from early tribes. At marriages the fathers among the Kura of West Bengal wash the feet of the young couple (Dalton's Descriptive Ethnology of Bengal, p. 234). The Gends sprinkle water before the bride and bridegroom, and the bride and bridegroom blow water on each other (Hislog's Shoriginal Tribes of the Gentral Previous, App. I. p. 5). In Bouhay in launching a bout when the rains are over the Rainagiri houtmen shout 'Allah' and dash handfuls of water over each other (MSL notes).

In many places of Hindu pilgrimage the holiest spot is a pool called Râma's Pool. Western India has three famous Râma's Pools at Nâmk, at Sôpâra near Bassein, and at Gôkarn in North Kâmara. The pool is always, wherever found, secred to Râma, and there he bathed. But the basis of the secredness of the pool is not the fact that it has been honoured by Râma bathing in it, but that its water had power to purify even Râma, who was haunted by the most dreaded of spirits — a dead Brâman, the giant Râvan, whom he had slain. The tradition, that Râma bathed to free himself from this hausting spirit does not remain at Mâck er at Sôpâra. It is fresh in Gôkara. Whoever bathes in the Gôkara pool will be freed from the sin, even of Brâman murder. This instance shows the origin of the worship of wells common over the world, nowhere more common than in India. It also shows that sin is possession by an evil spirit, and that a pilgrim can be element from ain by water, became water drives out evil spirits.

¹⁹ This Hells water, is supposed to remove diseases and prolong life. The Saiskrif text which the Belimons report, while sipping the water, is significant of this belief. It is: "Abliance-typing-common, severyblinished and relative fall before the saint of this belief. It is: "Abliance-typing-typing-the water, which checks water, which checks untimely death and removes disease."

2 Bearing Genetics, Vol. XV, pp. 242, 242.

are purified after a birth or a death by drinking water, which has been touched by a Havik Brákman.21 In Dhârwâr the Swâmîs give their followers holy water before meals, and when an infant is bathed, the mother waves drops of water round its face, and says : - " May you live long,"22 A Kurubar, or Dharwar, shepherd in search of merit washes his teacher's toes and with the water bathes his own eyes. The teacher says :-- "You are sure to go to Siva's heaven : all evil is scared out of you."23 In 1790, Moore24 notices that the Musalman Nawab of Savanûr in the Bombay Karnatak never drank any water, except what came from the Ganges. The water was drunk by the Nawab, not from any motive of piety, but because of its medicinal properties. The Sholonr Panchals sprinkle the child with water as soon as it is born.25 Among the Guiarat Vanis, when the bridegroom on horseback reaches the bride's marriage porch, her mother comes out, waves a pot full of water round the boy's head, and spills it over the horse's legs.26 At the birth of a Dekhan Bâmôsî child, women-neighbours of any caste come and pour many pots of water in front of the door.27 When the Bangdis, or shepherd blanket-weavers of Ahmadnagar, go to visit one of their gods they throw a handful of water at his feet, bow and withdraw.28 In Southern India holy water is sprinkled on the mourners' heads, and mourners are made to drink holy water on the tenth day after a death.2 Brahmans, at their morning bath, cast water on the ground to destroy the demons who war with the gods.36 Brahmans also offer tarpan. — that is. they pour out water, - for their ancestors and for heavenly spirits.31 When the Khonds wish to consult a priest they dash water on him, - that is, they scare the evil spirits from his neighbourhood. The priest sneezes, and the good spirit comes into him and the Khonds listen. The Parsis hold that water purifies women at child-birth, heals sickness, and scares They believe that rain frightens sickness and death,24 and they use holy water, over which prayers have been said. The Parsis have parydb, or holy water, which with prayers, removes all impurities.36 The bath in the early morning is binding on the Jew, because when he is asleep evil spirits have rested on him.37 When a Jew became unclean, by touching a dead body, he and his house were sprinkled with the water of separation. This was made with the ashes of a red heifer, cedar and scarlet 38

The Buddhists of Ceylon sprinkle holy water on the worshipper.³⁰ This holy water is prepared by four priests, who sit before dawn in the river Ganorus. On the first sign of dawn (light or fire which chases spirits) with a golden sword (spirits fear gold) they draw a circle (spirits fear a circle) in the water and fill the pitcher from the inside of the circle.⁴⁰ The Burmese believe that spirits cannot cross running water, and stretch threads over brooks to help them to cross.⁴¹ The Burmese, while using the first bucket of bathing water, say Pâll prayers with the object of guarding against sickness.⁴² At his crowning the Burman king was sprinkled with holy water.⁴³ The Malays wash new-born infants.⁴⁴ The Chinese Mandarin washes his hands before making offerings to the gods.⁴⁵ In China, at the end of a feast, waiters go round with basins of hot water, and the guests wash their hands and faces. Among the Musalmäns of Turkistân, before prayers, the hands and face are washed, especially the seven openings, e. g., the eyes, ears, nostrils and mouth.⁴⁵

In Melanesia, charmed bones and leaves are steeped in water to drive out the evil spirit. Polynesian priests consider sea-water pure owing to its containing salt, and from

```

it prepare a holy water to lighten pain and remove disease.⁴⁸ The Papuans of New Guinea, when they mean to be peaceful, sprinkle water over their heads.⁴⁹ The New Zealanders wash new-born infants.⁵⁰ At Guinea (in 1562),⁵¹ a captain of negroes came up to a British ship in a canoe, hollowed like a trough to feed hogs in. He stopped at some distance, and put water on his cheek, and would not come near till the English Captain did the same.

Holy water is used in Madagascar,⁵² and while building a royal house the chief post is sprinkled with holy water by the king.⁵³ The Buras of East Africa, to clear the road, equive water from their mouths over any one about to start on a journey.⁵⁴ Among the Zulus, when an epidemic breaks out, a doctor passes through the town with a bunch of boughs followed by a man with a large bowl of water, and sprinkles the water on the door of every house.⁵⁵ Nile water cures children of rickets.⁵⁶ Among the Nubians of Africa the best medicine is water, in which leaves of papu with texts from the Korân have been washed.⁵⁷ The Bongos of the White Nile sprinkle the sick with boiling water.⁵⁸ Among the Matambe negroes the widow is ducked in a pond to scare the husband's spirit and remove the risk in a second marriage.⁵⁹ The Mongols, the Africans and the people of Guinea use holy water.⁶⁰

In the elaborate Mexican baptism the early object to drive out evil spirits is hidden by much that is more modern: still, that the object is to drive evil out of every limb is shewn by the detail of touching the babe on the breast and crown, while the nurse says:—"Whoever thou art in this child, begone, leave it, put thyself apart." The Peruvians have a yearly sprinkling with water on the first day of the September moon.

The Greeks used holy water mixed with salt. The perirantocrion, or holy-water vessel, was generally placed at the entrance to the Greek temple.63 The Romans used to pour out libations of water at the end of every feast.64 In some of the higher masonry degrees the candidate is purified by water, nominally to cleanse him from the taint of the lower condition.65 In consecrating the throne, or altar-table, in a Russian church the wood is washed with holy water and wet with wine and then dried.66 In the Russian church at baptism the priest blows on the brows, lips and breast of the child, and says three times: --" May every evil and unclean spirit that has concealed itself and taken its abode in his breast. depart."67 The Russian priest consecrates water for baptism by passing his hand three times over it, making a sign of the cross, blowing on it, and signing the surface with a feather dipped in holy oil. 93 In Russic water is made holy by dipping the cross into it. The drops that fall from the wetted cross are sprinkled on the bell. The Russian Bishop, after he puts on his robe, has water poured over his hands. 70 In giving the Sacrament, the Roman Catholic priest washes his hands. 71 At the Roman Catholic lay baptism, when a priest cannot be found and the child is dying, the child may be baptized with common water.72 Holy water is sprinkled on the Roman Catholic bride and bridegroom.73 In the Roman Catholic ritual the sick man drinks water in which the priest has washed his hands.74 In Brandenburg, peasants pour water at the door after the coffin to prevent the ghost from walking.75 It is a common belief in Europe that spirits cannot cross running water.78 In the South of Scotland, about the beginning of this century, all but the profane, before going to bed, set a tub or pail of water for the good apirit

to bathe in (originally to keep off evil spirits).77 For the same reason the hands and feet of the dead were washed.73 The Irish made sheep swim on the first Sunday in August.79 Wellworship was common in Scotland till comparatively recent times. The epileptic were carried round the well three times, and pieces of rags from the sick were brought to the well.80 When their oxen, sheep, or horses were sick, the people of Orkney sprinkled them with water, called by them forespoken water. They also sprinkled their boats with forespoken water, when they did not prosper or succeed in their fishing.81 In England, in 1620, water from a smith's forge was believed to cure splenetic affections, passion and madness. 83 Christian baptism in some parts of Europe is believed to drive out an evil spirit. So in Germany the peasants are in great fear that spirits will get into the child between birth and baptism,83 and so the Roman Catholic priest in baptizing the child orders Satan to begone. Holy water is used both by the Greek and the Roman Churches to drive out demons.84 The following spell, enumerating the names of spirit-scaring articles, is from Herrick's Hesperides, p. 304:-

" Holy water come and bring, Cast in salt for seasoning. Set the brush for sprinkling. Sacred spittle bring ve hither, Meale and it now mix together. And a little oil to either. Give the tapers here their light, Ring the saint's bells to affright Far from hence the devil sprite."85

In early England holy water was given to mend sick patients, 86 and was (A. D. 600) sprinkled over pagan fanes to make them Christian.87 In England, if a child cries when he is being baptized, people say it is the voice of the evil spirit being scared out of the child.88 In the north of England it is believed that a sickly child's health is improved by baptism, and in Northumberland old people say of sickly infants : - "A child never thrives till he is christened."89 In Wales, water was taken to fill the font from holy wells, 90 and a well in Innes Maree, in West Scotland, cured lunatics. 91 Southring water was a great cure in England (1560) for people taken with the facry.92 A cure for rheumatism in the north of England is to tie the sick in a blanket and set the sufferer in a running stream. 33 Throwing the patient into the sea was a great cure for madness in the Scotch Highlands.44 In the English form of baptism in use till 1550 the following words occur: -- "I command the unclean spirit to some out and depart." 55 In Lancashire, in England, it is unlucky to let a cat die in the house: a dying cat is drowned.90 In Yorkshire, hot water is poured over the door steps as the bride and bridegroom drive away.97 In Cornwall, the disordered in mind are seated on the brink of a pool filled with water from St, Nun's Well: a sudden blow on the breast then knocks the patients into the water where they are left till their fury fades. They are next taken to church, and masses are said over them.28 Water stops all spells : so if you can put a brook between you and a fiend you are safe. So " the running stream dissolved the spell."100

RY A BARTH OF THE INSTITUT DE FRANCE.

(Translated from the French by Dr. James Murinin.)
(Continued from Vol. XXIII, p. 574.)

Bur the chief publication of these last years, on the Atharra-Ve la is its proper ritual work. If a Kaubika-sutra, edited by Prof. Bloomfield. Long waited for with impatience, and annual stell at its full value before it appeared, thanks to what Profs. Weber and Bloomicki had extracted or permitted others to extract from it, it has not belied the expectations which were formed of it. The editor has surrounded himself with all the manuscript sources known, and has need them all to good advantage. He has published all that remains, all at least that is yet legible in the valuable comment of Darila, first made known by Prof. Weber, and has given copious extracts from the gloss of Keśava, another commentator. In a learned preface, he has carefully distinguished the different layers of his text, and has laid bare the old foundation of curious practices, which is as it were the kernel. The history of the Atharva-Veila, after these investigations, appears with an outline, which, if not quite new, is drawn with more firmness than in the past. It is a modern Veda, in the sense that it is only at a comparatively late time that it was put to use as another Veda, that it was furnished with all that a Veda should have; but as to its substance, it is an ancient, a very ancient text, which for other rites than the great sacrifices was not less celebrated nor held less sacred. As to the aid which Prof. Bloomtield's publication gives to the interpretation of these old texts, it would be hard to exaggerate its value. To make this clear to our minds we need only compare a translation in which this help could be employed, with another where it was wanting; for instance, the seventh book of M. Henry with his thirteenth. In this respect it is hardly likely that we need look for so much from the Commentary of Sâyana, which Mr. Shankar Pandit is preparing to publish. To the Atharva-Veda there have gradually been attached those Upanishads, which we may call floating, those which are not bound up with a body of Vedic writings still preserved, and whose number has gone on increasing.2 Among those which belong to this class and which must be accepted as ancient, is the Kuiha Upanishad, a curious Hindu speculation on the problem of life and death, which Prof. Whitney has translated afresh.3 Colonel Jacob, who has devoted himself enthusiastically to the study of this class of philosophic literature, has published a general concordance, in which every word and every phrase, however unimportant, is registered, with a complete enumeration of all the passages.4 This storehouse, which embraces texts of all ages. and omits none of any value, includes also the Bhagaradgita, which Col. Jacob was well advised to admit. The number of texts extracted is 67, or by another mode of reckoning only 56. and must have involved an immense amount of labour, since the author has not only collected from the printed material, but has corrected it by the manuscripts, and has very often been obliged to make a critical text anew, the first editions, notably those in the Bibliotheca Indica, being often very faulty.⁵ This Kośa of Col. Jacob will henceforward beindispensable as a working tool to all students of Hindu philosophy. We also owe to Col. Jacob excellent editions of the Mahanarayana Upanishad, and eleven other Upanishads of the Atharva Veda, with

¹ Maurice Bloomfield, The Kausika-Sûtra of the Atherca-Veda, with Estracts from the Commentaries of Dârila and Kesava; forming the XIVth volume of the Journ. Americ. Orient. Sec. New Haven, 1890.

² This process of attachment has been carried on still further, to those Upanishads which are actually a part of other Vedas, and which are handed down besides in an Atharva recension.

⁴ Colonel G. A. Jacob, Upanishadvákyakíšah. A Concordance to the Principal Upanishads and Bhagavadgtta, Bombay, 1891, pp. 1,683, large octavo.

⁵ Here I may mention the new editions of the chief Upanishads with a rich apparatus of commentary, which form part of the Anandásrama Series, in course of publication at Poons. They are both correct and moderate in price, and there have appeared up till now, the Iia, Kens, Káthaka Praina, Mundaka, Mándukya (with the Káriküs of Gaudapáda), Aitareya, Tuittirtya, Chândegya, Brihadáranyaka and Snetatustura Upanishads.

commed the special of that of Nariyana, when it was available, introductions and notes, where the chief shows both critical power and knowledge. To mention only one example, he has given a new and valid reason for believing that Sankara did not write a commentary on the Needler and Lyanishad, or that the commentary on that Upanishad which goes under his name, is not by him, a fact which, for me at least, has always seemed evident. These tents orlong to the period of the full development of the sectarian forms of Hindu religion, which does not imply that they are modern, but distinguishes them sharply from their ancient prototypes. When we reach them we have left the Veda far behind, and have perhaps even passed beyond the period in which the various systems of Hindu philosophy took the shape which they have retained down to our own days.

When did the Hindus succeed in unravelling the confused speculations of the ancient Upanishads, and the often contradictory prescriptions of their books on ritual — prescriptions which further are often inadequate for want of being put in a general way; when did they reduce them to a body of doctrine clearly defined and methodically arranged? Up till now this question has not been answered even approximately. We do not know, further, when this task of working out the philosophies reached a definite point, nor in what order it took place for the various darsanas, or systems. Apart from the sûtras of the Nyâya and the Vaiseshika, for which, as far as I know, this honour has never been claimed, the priority in point of time has been asserted in turns for the Mîmâmsa, the Vedânta, the Sânkhya and the Yôga, with arguments which are equally subjective, equally specious and equally weak according to the point of view in which we stand. Perhaps the latter question is one, which it would be better not to ask. It is clear that the philosophical doctrines have taken a long time to reach completion and refinement, and that the result was accomplished at the same period in the different schools. It seems that this was the same with the texts. They all argue against one another; they all shew signs of archaism, side by side with marks of later age and as indications of successive strata which had not entirely disappeared when they were finally recast. In the Sankhyasútras, for example, this fact is manifest. Lastly, it has not yet been shewn that influences coming from without had not, for some of them at least, aided in this latter result, and on this side, perhaps future researches will give us some points of chronology to start from. Of all these systems the Vedânta rests most directly on the Upanishads. Even in its form it comes before us as a discussion, a mimansa (its other name is uttará mimimai) of Vedic passages, with the intention of eliciting from them one doctrine. The fundamental sútras attributed to Badarayana, whom tradition identifies with the legendary Vyasa, the arranger of the Vedas, and the author of the Mahabharata and the Puranas, have appeared in a new edition (that in the Bibliotheca Indica has not been procurable for a long while) with the commentary of Sankara, and is in course of publication in Poons in the Anandasrama Series. Professor Thibaut, Principal of the Benares College, has published the first volume of an English translation, 8 which is no mere useless repetition of the work done already by Prof. Deussen, of which I had occasion to speak in the preceding Report. Without being so scrupulously literal as Prof. Deussen's version, it keeps very closely to the text, and though like Prof. Deussen, the translator follows the interpretation of Sankara (which is translated as well as the original sútra) he has been careful, in a long and very noteworthy introduction, to shew impartiality to explanations which do not agree with Sankara's. It is well known that Sankara's doctrine, which finally obtained supremacy in the

The Brahmasitras with the Bhishya of Srimat Bankarichirya and its Commentary by Brimat Anandajidno. Edited by Pandit Nêrêyana Sâstrî Ekasambekar.

B George Thibaut, The Veddnia Satras with the Commentary of Sankaracharya, translated. Part 1. Oxford 1800, forming the EXXIV th. volume of the Secret Books of the East. The translation goes as far as the end of * Tome XIX. p. 152.

school, maintains the view of a thorough-going idealism, of an impersonal absolute being, and of no reality besides that.10 By means of painstaking analyses, Prof. Thibaut shews that it is not wholly either that of the Voanishads, nor that of the sitras, but that it is the most logical resultant of both, that on this ground it has obtained supremacy in the schools, but that the other interpretation, that which unholds a modified idealism and which is summed up in the commentary of Riminuia, the zo-called Sribhashya, rests on a tradition which is not less ancient or venerable; that is goes back to the old vritti, now lost, of Bodhayana, and that in many places it seems to give more faithfully the meaning of the silings: that the two doctrines. defended in either of the commentaries, are found in their germs and in conflict even in the suites themselves; that if the one has got the upper hand among the Pandies, the other has always found vent in religious belief, which cannot quite dispense with personality in man, por the personality of the absolute. As to the text of the Sribhashau, which is being published simultaneously in two places in India, it makes very slow progress; in the Fandit it has got as far as II. 1:11 and in the Bibliotheca Indica, in Which only three parts have appeared, it is only at I. 2.13 Of another commentary on the same satras, the Anubhachya of Vallabiacharva, which also began in the Bibliothera Indica, I have received no instalments since my last Report. Râmânuja dates from the eleventh or twelfth century. As to the date of Sankara, which has always been in dispute, see a remarkable article by Mr. Pathak, who proves nearly conclusively that the great Vedantin lived at the end of the eighth century (Journ. Rev. As. Soc. Bombay. XVIII. 1891, p. 88).

To make up for this, Mr. Johnson has completed his edition in the Pandit (with an English translation) of the summary of Vedantic doctrine, also by Ramanuja, the Vedanta Tattvasara; and, in the same Magazine, Mr. Arthur Venis has finished his edition and translation of the Vedéntasiddhanta-muktavali.13 This latter treatise, whose author. Prakáfáranda. Mr. Venis assigns with great probability to the end of the sixteenth century, is like the former, a defence of the fundamental teaching of the Vedunta, but even more condensed and essentially polemical in tone. Against the Tettrasara of Ramannia he vindicates the absolute idealism of Sankara. Writings like these should never be published, except, as here, accompanied by a translation, and a translation, I will add, cannot properly be made except in India, and with the advice and help of a Sastrin who is a professed student of the system. A knowledge of Sanskrit, and even of Hindu thilosophy such as can be acquired here, are not enough: one must have lived from infancy in that atmosphere to be able to breath it freely. If any one doubts this, the experiment is easy to make. Let him translate two or three pages at the beginning of Prakasananda's treatise, and then compare the results; it is astonishing to find the number of things which one thinks one has understood and which have nevertheless escaped attention or been wrongly understood. Up to a certain point a commentary can take the place of tradition. One may succeed in grasping the full meaning, but at the expense of what an amount of labour. A special aptitude is needed to read through, with such assistance only, books like

We The legendary biography of Sankara, the Sankaradigvijaya of Madhava, which must not be confused with the spurious work of Anandagiri, having the same title and published in the Bibliotheca Indica, has been edited at Poona, in the Anandagrama Series by Papili Bābāji Mārayam Fadeke; Bri Bankaradigvijayah by Brimat Vidydranya, with the Commentary of Dhanapatishri and Entracts from the Commentary of Achebstardus Modaka Poona, 1861. This poon affects the style of a Mahabbaya. In the colopbon the author is called Mādhava, gives himself the title of Navakālidisa (1, 9), and invokas, as his gures VidyMārāha, who is identified with the supreme soul. In the first verse of the poem it is said to be an abridgment of a Prachtmanustarayaya, which, according to one of the commentators, must have been the work of Anandagiri, the pupil of a pupil of Sankara. The title and commentary identify this Mādhava with Vidyāranya Mādhavāchārya, the well-known commentator of the fourteenth century. But this identification is very uncertain, and for the time being the date of this Mādhavakara must retadin undetermined.

*****. ,

Elegation of the proof of the great polemical and essentially sceptical treatise by Sribarsha, was the use and shed in the Pandit, 14 or even shorter works such as the Naishkarmyasiddhi of Surresport, who is supposed to be a pupil of Sankara, and who plays an important part in the thereto is of the followers of the master, the Dasanamins. The latter treatise, which as is reflected to be its title, "the triumph of renouncement of action," that is, ritual acts, defends the position that knowledge alone can lead to final salvation, has been edited by Col. Jacob. with the comment of Juanottama and critical notes in which the quotations are carefully version. The editor has discovered a singular inadvertence on the part of a follower of Santara, who waged such constant war with the Mîmâmsâ school, viz., the attribution of the I describes to Jaimini. The fact that the two Mindinsas, the purva and the uttard, are often considered as forming one whole, is far from justifying or even explaining this slip-An addition of the same treatise with the same commentary is also on the point of being entre Litet in the Benares Sanskrit Series.16 The Advaitabrahmasiddhi of the Kásmîrî, Sad manda Yati, who belongs to the same school of the Vedanta, is in course of publication in to a Belificher Indica, but has not got beyond three parts.17 But the translation of a more popular exposition of the Vedánta, by another, or it may be the same, Sadánanda, the Vedántasilva, which was published by Col. Jacob for the first time in 1881, has reached its third edition.18 Has unintermitted researches have enabled the translator to identify all but two or three of the quotations scattered through the treatise. Even when these manuals are independent works. like the Vedantasara, they have the general characteristics of the commentaries, bristling like them with technical terms and are distinguished only by a uniform conciseness, while in the commentaries curtness alternates with extreme prolixity. The Panchapadikavivarana is a commentary at the third remove, "the explanation of the Panchapadika," of a section of the Bhamati of Vachaspatimiéra, which is itself a gloss on the commentary of Sankara on the Vedántasútras.19 The date of the author, Prakášatman, or Prakášanubhava, is uncertain, but he is prior to Madhavacharya (fourteenth century). His treatise, which enjoys a great reputation among the Vedantins, has just been brought out in a new collection appearing in Benares under the direction of Mr. Arthur Venis, the Vizianagram Sanskrit Series, and is the second publication in point of time, although it is numbered five in the series. The first number (No. I.) is another Vedantic treatise of much more modern date, the Siddhantalesasangraha of Appayadikshita, a prolific writer and ardent Saiya, which, however, did not prevent him from writing, besides other Vedantie treatises, this defence of the advaita doctrine, so little favoured by his co-religionists.20 He was born in the neighborhood of Conjevaram, where his descendants are still living, and composed during the last thirty years of the sixteenth and the first thirty years of the seventeenth century, 104 works on nearly all branches of knowledge, poetics, rhetoric, the doctrines of Saivism, Mîmâmsâ and Vedânta, as to several of which the late Dr. Burnell wrongly challenged his anthorship as incompatible with his Saiva belief. Handbooks of his, such as the Kuvalayánanda, the Vrittivárttika, the Siddhántalcia, are still celebrated; but they seem to have been more quoted than read. Thus, the end of his short treatise on rhetoric, the Vritti-

vártika, has been lost.²¹ He war, it is said, the first of the eight pandits who were the diggajas, "the elephants of the cardinal points." of the court of Vijayanagara, and seems to have been one of the most perfect specimens of those prodigies of the learning of the decadence, who went on ceaselessly re-casting the work of their predecessors, without adding an atom of their own. The literary profession has become hereditary in the family, and to the data given about him in the Sanskrit preface to the Siddhántaleiu we may add that his grand-nephew Nilakanthadikshita, speaks of his great-uncle at the end of his Annih adicate to Kanumila, 1800).

The works just mentioned belong strictly to the Vedanta. The Jicannuktivivika22 of Vidvaranya, i. c., of Madhavacharva, in which the great commentator lavs down the theory of "deliverance during this life," is more eclectic. Final deliverance takes places only after death; but like all the Hindu systems, the Vedanta admits that the wise man may attain to a state which is equivalent to it during life. But it shows only by what means the wise man may arrive at it, and does not describe it. To gain materials for such a description, Madhava has had recourse to works which, strictly speaking, do not belong to the Vedanta, not only to the Bhagavadgitá and the Bhaga ata Parána, but to the Yogavasishtha, and has borrowed from the Yoga his hypnotic practices and his theory of ecstasy. In spite of these borrowings and the directions how one must attain to this state, the treatise deals rather with the mumukshu than the multa, with the aspirant rather than with him who has already entered into this condition. What Prof. Lanman23 and M. Oltramarc24 have written is rather on Hindu philosophy in general, than specially on the Vedunta, the first on the beginnings of Hindu pantheism, and the second on Hindoo pessimism. Professor Weber has given an analysis of two short compositions, the Ashtávakray'til and the Bhedábhedaváda of Vamísdasa, of which the former is the more ancient, but which seem both to belong to the Vedânta of the Puranas.25 Professor Windisch, again, has collected from the literature and the traditions of the people the opinions held by the Hindus as to the seat of the soul,28 which they placed, like many other peoples, not in the head but the breast, and has written a capital essay on a problem of physiology which has been much debated in the schools, and has left permanent traces; "the purusha, which is seated in the heart" of the Upanishads has never disappeared from philosophy.

The Mimansa was to the ritual portion of the Veda what the Vedanta was to its speculative side; it reduced it to a system intended to supply a solution of all dubious cases, by applying a kind of casuistry. To do this it had to work out into a system several doctrines which had only at first a very remote connexion with the ritual; the theory of knowledge and dialectic, questions of authority, and customary and social law, the reward of actions and the end of man, up to questions of pure metaphysics which the general tendency of the system is rather to exclude. The issue of the fundamental text, the Satras of Jaimini in the Bibliothera Indica, has made no advance since my last Report. The text and index are complete, but the title of the second part, and a few words, at least by way of introduction on the method of forming the text and the manuscripts used by the editor, Pandit Maheschandra Nyayaratna, are still wanting. These sutras are supplemented by the four books of the Sankarsha or Sankarsham Kanda, which Sahara Svamin does not appear to have commented, and which is begun in the Pandit with a commentary called Bhattadipika.

²¹ All that remains, the two first chapters, has been edited in the Pandit, XII. (1990), and in the Kdoyumelle (1993).

²⁷ Pandita Mahedachandra Nyayaratna, The Ministrict Dariana, with the Commentary of Bovara amen, Part I.-XIX. Calcutta, 1870-1887.

The Tantravárttika of the celebrated Kumárila Bhatta (a commentary on the commentary of Sabara Svámin on the sitras, nominally at least, but more original and important than one might suspect from its subordinate position), edited in the Benares Sanskrit Series, has advanced by five new parts, 29 and goes as far as III. 4 (the sútras are in twelve books). The Sústradipiká, an exposition of the system based on the Tantravárttika, by Pârthasârathi Miśra of Mithilâ, has meanwhile been finished in the Pandit. 29 Lastly, a short treatise by Vâchaspati Miśra, who wrote on nearly all the darśanas (at the end of the eleventh or beginning of the twelfth century), the Tattvabindu based also on the teaching of Kumârila, has been edited in the same magazine. 30

For the dualistic doctrine of the Sankhya we meet the name of one scholar only, but he has presented us with three works of very great merit. Professor Garbe, who has put to wonderfully good use the short visit he paid to India for the purpose of studying the traditional literature of this school thoroughly, has given in the Bibliotheca Indica an excellent edition of the Sankhwasutracritti of Aniruddha, the oldest commentator of the sútras who has reached us, though he is no older than the fifteenth century.31 He has subjoined extracts from the Samkhyavrittisara of Vedûntin Mahâdeva, which he supposes to have been written about 1600, A. D., but which must be later by several decades, since we possess another work of this same Mahadeva dated 1693.32 Till now we had only the meagre extracts given from these commentaries by Ballantyne in the reprint of his work on the Sânkhya (London, Trübner, 1885). Professor Garbe has also translated into German the commentary of Vijñânabhikshu (well known from the edition of Dr. F. E. Hall), the Samkhyapravachanabhashya,33 which belongs to the sixteenth century, and with all its great merits often errs by trying to reconcile the Sankhya with the Vedanta. This translation is in every point of view remarkable; it is made from a better text than Hall's, and all the technical terminology of the Sankhya has been subjected to laborious and careful examination, from which it has issued in great measure in a new light. Not less remarkable, and perhaps more interesting for the majority of readers, is Prof. Garbe's third publication, the German translation of the Sankhyatattva-kaumudi of that same Vachaspati Miśra, whom we have seen above expounding the doctrines of the Vedanta and the Mimamsa.34 Professor Garbe's translation, as before, is distinguished by the scrupulous care he has employed to grasp and render the whole bearing and the precise meaning of the technical terms, and in this respect it would seem his work has reached finality. As to Vachaspati's work, Prof. Garbe pronounces it to be the best in the whole range of Sankhya literature, a judgment in which I concur with confidence, if I may be permitted, perhaps, to make an exception in favour of the text on which this Kaumudi is a commentary, the ancient Sánkhyakáriká of Ísvarakrishna (translated, we are told, into Chinese in the sixth century), which, by reason of its sobriety and vigour, its clear and direct style (not without an elegance of its own), seems to me to be the gem not only of the Sankhya, but of all the scholastic, philosophy of India. In the introduction, a model of lucidity and solid learning, Prof. Garbe takes up the question of the origin and age of the Sankhya. He considers it to be the oldest of the darianas, formed first of all as a reaction's

We withstanding the supposed antiquity of the Sinkhya system, Prof. Garbe does not claim a great antiquity for the Sinkhya sitrus, which on the contrary he reckons very modern, more recent not only than the Sinkhya-kiriki, but even than the Loumnett of Vichaspati. Like him, I doubt the high antiquity of these sitrus (of. Rouse

against the idealism of the Upunishads, and that Buddhism took its rise from it. He has carefully examined the resemblances, which have been before pointed out, between Buddhism and the doctrine of the Sankhya, and has indicated fresh ones. On both points his arguments have completely failed to convince me, and I still remain in the position of doubt which I formerly gave utterance to, and which Prof. Garbe has tried to remove. I do not see why the Sankhya should have been reduced to a system earlier than the doctrines which it combatted. and, on the other hand, granting that these systems grew up side by side, the original affinities of Buddhism are nearer to the Vedanta than to the Sankhya. The coincidences in detail and terminology, which are beyond denial, may, in this respect, be deceptive. Among all the ancient systems, the Sankhva alone elaborated a complete theory of finite things, and Buddhism must have horrowed this theory from it, as did all the Brahmanical systems, when they wished to speak of the material world, or the notions, which according to them, were a part of that world. But I doubt if it took from this quarter the absolute negation in which it logically ended, though it did not always and uniformly profess it. On this point, again, there is between Prof. Garbe and myself a little misunderstanding. By characterizing the Sankhya as "a logical system, hardly admitting development or profound modifications, . . above all with very little sentiment" (Les Religions de l'Inde, p. 70 of the French edition), I did not mean to imply that it not give sufficient importance to the theory of sensibility and of the external world (exactly the contrary is the truth, as Prof. Garbe very justly remarks), but only that it was not conducive to the enthusiasms and unrest of a mysticism without an object. And by Buddhist pessimism, which I cannot find in the Sankhya, I meant its metaphysical pessimism. The Sankhya philosophy is pessimistic, to be sure, since life, for it, is a seduction and a slavery. But, though it wishes to escape from suffering, it does not wish to escape from all existence, nor from the continuance of the principle of personality, in which, on the contrary, it has the firmest faith, while the Vedanta and Buddhism both must needs end by denying it. In a word, now as then, I see in Buddhism more a Vedanta which despairs of the absolute than a Sankhya which has ended in scepticism.

I have just said that the Sankhya "hardly admits development or profound modifications." It, nevertheless, has undergone one modification, in the Yoga it has become theistic and devout. This latter system is, to put it shortly, a kind of supplement to the Sankhya, which can be added to it or taken from it at will, and accepting the whole bulk of the ancient doctrine, so that the same name serves for both (Samkhyapravachana being the title common to the Same Thua and Yoga sútras), but bringing in a belief in a God, the Supreme Lord, and moreover a complete and often very grotesque discipline of the ascetic and spiritual life. It is from this side, without doubt, that the Yoga sútras have attracted the attention of the leaders of modern Hindu theosophy, since they recommend them as reading suitable for adepts, and have had an English translation made for their use.36 Besides this translation, which I have not seen, there is to be mentioned on the Yoga but one essay by Pandit Båshyacharya on the age of Patanjali, the author of the Yogasitras. The essay is a curious mixture of exact information and of assertions heaped up in an uncritical fashion. The Pandit's results are that Pataujali, the grammarian and author of the Mahábháshya, is also the author of the Yogasútras; that he lived after Panini and before the last Buddha, about the tenth century before our era; that he was only the last editor of the Sútras, which are infinitely older, and that the allusions to Buddhism.

Critique, 19th April 1886, p. 303), but can scarcely go so far. In the twelfth century it was universally admitted that a darkana must rest on a satra, and I can hardly conceive how at that time such an imposture could have been introduced into the schools and gained general acceptance.

We The Yoga stirus of Patanjali, translated by Prof. Mamildi Nabhubkei Dvicedi; published at the expense of the Theosophical Society of Bombay. Among the publications of the Society I may mention further the translations of the Bhagavadgith, the Prabodhachandrodaya, the Statkhyabarika, the Atmobadka of Sankara, reprints of the Up mishads translated in the Bibliotheca Indica, etc. From the point of view of literary archivology there is nothing to be said against this. But as reading for practical life and for ediffication, it must produce a curious effect on some minds.

which have been pointed out in his works, have reference to the Buddhism of the predecessors of Sakyamuni.³⁷

In the domain of the Nyâya, whose aim is the theory of knowledge and logic, the publication in the Bibliotheca Indica of the bulky and not very old treatise of Gangeśa Upâdhyâya, the Tatton-hintâmani, has progressed by eight parts³⁸ since the last report, while that of the more ancient commentary of Uddyotakara, the Nyâyavârttika, begun in the same series has not advanced a step.³⁰

To make up for this, a happy discovery of Prof. Peterson has restored to us two monuments of the Buddhist Nyâya, perhaps works of those Buddhist dialecticians against whom Kumârila, Śankara and Sureśvara argued; and by a curious chance, it is from the recesses of an ancient Jaina library that these venerable relics are restored to us:—an anonymous treatise, the Nyâyabindu and the fîkâ, or gloss on this treatise by a certain âshârya Dharmottara. The work had before been pointed out by Wassiljew as existing in a Tibetan translation in the Tanjur, and in his preface Prof. Peterson at first thought of identifying this Dharmottara with the founder of the Buddhist school which is called after him Dharmottariya. I see with pleasure that he has now given this up, if for the school is mentioned even in the ancient inscriptions of Kârlî and of Junnar, while this Dharmottara was preceded by Vinîtadeva and Dharmakîrti, who belong to the seventh century, and also commented on the Nyâyabindu.

The Vaiseshika is closely related to the Nyâya. Their tradition is partly common, most of the teachers of the one having been also teachers of the other. In their aim, too, they are also both independent of the Veda. They only appeal to the sacred text for form's sake, the one for its logic, the other for its categories and for its theory of substance and qualities. Thus they have both been cultivated by Buddhists and Jainas. The latter have claimed Kanada, the founder of the Vaiseshika, as one of themselves. The new edition of the Sútras undertaken in the Benares Sanskrit Series, and mentioned in the preceding Report, is still at its first part only.42 But I have to mention another, the work of a reformer. The Mahamahopadhyaya Chandrakanta Tarkalankara is a professor in the Sanskrit College of Calcutta. He has written much and in more than one department, poetics, drama, smriti and grammar; but his favourite study is philosophy. He has formed the conviction that since the time of Udayana, i. e., at least since the twelfth century, the Sútras of Kanada have been wrongly understood on several important points, and to set forth his discoveries, he has incorporated them, according to Hindu usage, in a commentary. He has made an edition of the Sútras accompanied by a new Bhashya.43 At first sight these new views do not seem very important. The endeavours to shew, for example, that for Kanada non-existence is not a category in the same sense as the others; that the categories can be reduced to three, substance, quality and action, which imply the others; that time and space are not modes of substance; that the quality of form cannot be denied to air; that gold and silver do not belong to the element fire, but to earth; that the soul, in no case, can be perceived by the senses, etc. All this seems very Hindu and somewhat strange. Looking at

them closer we see that these propositions are intended to make Kanada's physics more compatible with our own; that we have, as it were, a very delicate unobtrusive thread of Western thought introducing itself into Hindu tradition. We recall what Alberani tells us of the Hindus of his own time; teach them a new decettine, at once they will turn it into Slokar, so that next day you will not be able to recognize your own thoughts. And we are led to think that this must have been the case from the earliest times when the Hindus found themselves in contact with knowledge which was in advance of their own, and that more than one borrowing may thus he hid, and concealed from our eyes, in this traditionary lore of theirs which looks so original. We are indebted to the same author for two editions of another work of one of the great teachers of the Nyâya and Valšeshika, the Kusumáñjali of Udayana, 4 a treatise on the existence of God, well known by the fine translation made thirty years ago by Prof. Cowell.

(To be continued.)

DESCRIPTIVE CATALOGUE OF OBJECTS MADE AND USED BY THE NATIVES OF THE NICOBAR ISLANDS.

BY E. H. MAN, C.I.E.

⁴⁴ The first of these editions was issued in Calcutta in 1889. It is entirely in Sanskrit, without an English title, and contains the Commentary of Haridasa (published in Cowell's edition also) with a gloss by the editor. The other is published in the Bibliotheca Indica; Mahamahopadbyaya Chandrakanta Tarkalankara, Nyaya Rusundajaki-prakanunam, Parts I.-III. Calcutta. There are four other parts which I have not yet received. It contains the Commentary of Ruchidatta and the gloss of Vardhamana, and gives the complete text, while the first only gives the karkar.

CATALOGUE.

1. Huts and Village poles.

- 1 (m). Nī (Car Nic. Pati). Hut raised on posts 5 to 7 feet above the ground. Huts vary in size and description, as follows: - (1) Ni-holpul, of circular bee-hive shape. with plank or spathe walling and windows, made in the Central, and, less commonly, in the Southern, Group. In certain villages all other designs are tabued. (2) Pati-chanwi, a modification of No. (1), made at all the Northern Islands. At Chowra, and at certain villages elsewhere, no other description of hut may be (3) Pati-tamdro, oval-shaped hut with dome roof, made almost exclusively at Car Nicobar. (4) Ni-ta-optopshe, oblong, with roof somewhat resembling the tilt of a waggon, made with slight variations of form in certain villages throughout the islands. (5) Nī-hillē, ordinary oblong hut with pent roof of the Malay pattern, in common use in the Central Group, and erected when time, labor, and means are limited. In the Northern Islands, i. e., Car Nicobar, Chowra, Teressa and Bompoka, the thatch consists of a thick layer of lalang grass (Imperata) neatly laid on, which lasts for many years. In the Central and Southern Islands, leaves of the Nipa fruticans are generally used, less frequently cane, or Pandanus leaves, or Areca spathes. At Car Nicobar cocoanut fronds are largely used in place of thatch for covering the roof of small or temporary huts.
- 1 a. (m). Kanaiya. Village poles usually one or more for each dwelling-hut in the village. -60 ft. to 80 ft., or more, high, and ornamented with tufts of young cocoanut-leaves at intervals of every 8 or 10 feet of their length. They are planted along the foreshore in front of certain villages in the Central Group, the object being to scare away evil spirits. They are renewed at a certain season once a year, each community having a prescribed "moon," or month, in which to do this. At Car Nicobar a small variety, called maya, is erected at the change of the monsoon, i. e.. after the termination of the rains, when fever is prevalent. Six months later, when the rains commence, a lofty variety, called kentula, is substituted. One, or more, of a larger and loftier variety of kanaiya, called Kanaiya-ta-karu, is crected at several of the villages of the Central Group in turn. The occasion is called Et-kait-fil, when dancing and singing take place as well as feasting. This festival occurs during the rains and at intervals of five or more years, according to the wealth of the particular village in pigs. This species of kanaiya is ornamented with a flag at the top in addition to the coccanut-leaf tufts at intervals throughout its length. They require derricks and a large number of men in order to hoist them into position along the foreshore in front of the village (vide No. 76). No significance is attached to them. They are merely intended to afford evidence of the skill of their makers.

2. Canoes and their fittings.

A NAME OF THE PROPERTY OF THE

- 2 (m). Düs (Car Nic. Ap). Outrigger-cance, of various sizes from about 8 feet to about 50 feet long, made in the Central and Southern Groups and of the smaller sizes only at Car Nicolar. In the Central Group the trunk of the Calophyllum spectable is usually preferred. All but the very small cances are usually provided with one or more wooden mosts (kanāma), cotton sails (hentēha), on certain festive occasions, an ornamental prow (karūha) painted vermilion, and colored calico pennons attached to the mast-head (kōi-kanāma), and out-rigger per-fastenings (henēma-riie).
- 2 a. (m). Ti-neanga (Car Nic. Chakanga). Ornamental grating, placed as a seat for one or two children in the hows of a large cance. It also serves to keep the karuha (vide under No. 2) in position.
- 2 b. (m). Kanai-ridia. Ornament of bamboo, or wood, fixed upright, like a flag, in the projecting stern of a cance on festive occasions.
- 3 (m). Pōwah-enkòiña (a), Pōwah-enkana (b), (Car Nic. Paiyūah). Paddles: (lit., male (a), and female (b). The former are made only in the Central and Southern Groups. and are distinguished by the lozenge-shaped ornament at the point of the blade. The wood used is usually that of the Garcinia speciesa.
- 4 (m). Lôc-isma-hoanh. Furling leaf-sail, made of the leaves of the Nipa fruticans: now-a-days rarely used, and only in the Central and Southern Islands. It is preferred to a cloth sail (henteha) only when necessity arises for sailing close to the wind. On the death of its owner it is lashed to his grave head-post (vide hentain-kōi-pentīls, No. 163).
- 5 (m) Henteha-dai-oyau. Cocoannt-leaf sail. An improvised sail made by trimming a single cocoanut frond, which is then fixed upright in the canoes. Is used only in the Central Group, and only for short trips when other sails are not available.
- 6 (m). Shin-ngan (Car Nic. Tanam-ap). A long thin pole for propelling a cance in shallow water.
- 7 (m). Shin-poya (Car Nic. Het). Anchor; usually consists of a lump of iron or stone, which, by its mere weight, serves the intended purpose.
- 8 (m). Wang (Car Nic. Wang). Movable partitions placed near the centre of large canoes, and lashed to the thwarts or gunwale, when conveying cocoanuts, garden produce, etc., to a distant village, the object being to keep the deepest portion of the canoe free for baling purposes. Two, or sometimes one, suffices for each loaded canoe.
- 9 (m). Hineat (Car Nic. Hanoka). Wooden scoop for baling a cance.
- 10 (m & f). Tane-dak-düe. A half-cocoanut-shell, used for baling a canoe. Similar shell-cups are used for other purposes. (1) For lighting a fire or for drinking, when they are called taiyak or enfa (vide No. 38). (2) For filling any utensil with water, when they are styled henfuata. (3) With a hole through the bottom, for serving as a funnel, when they are named hendiwa (vide No. 36).

3. Spears and Harpoons.

- 11 (m). Shanen Mong-heang (Car Nic. We-ta-heng-ngapak). Pig spear. The shafts of this and the other shanen spears are made of strong, heavy wood. Shanen by itself denotes any spear having a bladed head.
- 12 (m). Shanen Hoploap (Car Nic. We-wain). Pig spear: also sometimes used for spearing sharks and crocodiles. A similar weapon is used by the Malays in the Straits Settlements.

- 13 (m). Shanen Kopaton (Car Nic. We-tabaku). And 14 (m). Shanen Yanoma (Car Nic. We-tabaku). With these weapons the Nicobarese arm themselves when visiting distant viliages, in case of any serious dispute or attack taking place. They differ only in the size of the bladed head, the former being the larger of the two. They are sometimes used for spearing sharks.
- 15 (m). Shanen Harata. Pig spear with detachable head. The blade resembles that of the shanen mongheang (vide No. 11), and the arrangement for attaching it to the shaft is identical with that of the hinwein (vide No. 22). The cord attachments and lashings of this, as well as of all the iron-headed spears and harpoons, are made with the bark fibre of the Gaetum gnemon (Nic. Het-toit, vide No. 145), of which great use is made.
- 16 (m). Chenòk-kolpāl. A light single-pronged and barbed spear, used occasionally for collecting beche-de-mer along the shore for sale to Malay and Chinese traders. Sometimes used by, or on behalf of, mourners for spearing fish (vide No. 24), also for spearing any object in play.
- 17 (m). Miàn-momanya (lit., two-pronged spear) [C. N. Pak-ma]. Used for picking up bêche-de-mer along the coast for sale to Malay traders and for spearing fish. The shafts of this and of the other miàn spears are made of light imported bamboos, the local variety of bamboo not being so well adapted for the purpose. Miàn denotes any spear having two or more barbed prongs.
- 18 (m). Miàn-löe, lit., three-pronged spear. 19 (m). Miàn-fōan, lit., four-(in a row) pronged spear. 20 (m). Miàn-kanòp, lit., four-(in a circle) pronged spear. And 21 (m). Miàn-tanai, lit., five-pronged spear. Used for spearing fish by day and by torchlight at night. Sometimes also used for spearing flying-foxes, when hanging asleep from a branch: for this purpose a long bamboo pole is substituted for the ordinary shaft, so as to be able to reach the bat by a mere thrust.
- 22 (m). Hinweih or Hinlâk (Car. Nic. Lâk). And 23 (m). Kan-shōka. Two descriptions of harpoons for spearing turtles, ray-fish, sharks, and dugongs. The latter weapon, being provided with a long line, which is held in the hand, is first thrown; after which, in order to render the capture more certain, the former is brought into use. The shaft of the hinweih is of bamboo, but that of the kanshōka is of hard wood.
- 24 (m). Palahōma. Spear which alone can be used by, or on behalf of, mourners during the mourning period, and not before the Entōin memorial-feast, which occurs 3 or 5 "moons" after the death. The shaft consists of a short piece of strong, thin, flexible wood, and the iron-head is a single prong. Fish speared with any of the miàn (vide No. 17) spears cannot usually be eaten by mourners, as they possess more than one prong. At certain villages, however, two-pronged spears are conceded for this purpose. The palahōma is also used in play for spearing a cocoanut, which is rolled along the beach for the purpose.
- 25 (m). Hokpåk (Car Nic. Påk). Wooden-pronged spear, for spearing garfish by torch-light. The lashings are of cane, and the shaft of bamboo.
- 26 (m). Shinpung or Opwah. Wooden-pronged spear, resembling the Hokpak (vide No. 25), but smaller: used for spearing sardines. The lashings are of the same fibre as that employed for the various iron-headed spears and harpoons.
- 27 (m). Hinyūan. Wooden spear with barb-like notched head, as used by the Shom Pen Tribe both in hunting and, as a weapon, in their raids on the coast inhabitants. Similar spears are made by the latter for use in repelling hostile parties of Shom Pen. The wood used is that of the Areca catechu.

4. Fighting sticks and hats.

- 28 (m). Paiyūah (C. Nic. Harah-paiyūh). Fighting-stick, generally about 12 feet long. Used somewhat like a quarter-staff at all the islands, —except Car Nicobar where a light sapling is employed both in settling disputes between villages or individuals, and in sham fights at memorial-feasts, in order to gratify the departed spirits: hence the necessity for the padded hats (vide No. 29). When fighting in anger, these sticks, which are made of the Garcinia speciosa, are often previously smeared with pig's blood and sand, and the knots in the wood are not removed.
- 29 (m). Kemili. Padded fighting-hat, worn in the Central and Southern Groups when using the paiyūah (vide No. 28). The lining, or padding, usually consists of the ochrea—i. e., the fibrous stem sheath—of the occount tree.
- 29a. (11). Kemili Ok-ho. Padded fighting-hat, made of the bark-cloth prepared from the Ficus breviouspis (vide No. 140), sometimes made and used in the Southern Group.
- 30 (m). Kahawat. Fighting-hat made of the husk of a cocoanut, after removing the shell and its contents, used at Teressa, Bompoka, and Chowra, when fighting with the paiyuah (vide No. 28).

5. Bows and Arrows.

- 31 (m). Fòin (Car Nic. Lendrain), a. And 31s. (m). Ann-chaka-fòin (C. N. Chok-lendrain). b. Cross-bow (a), and bolt (b), used at Car Nicobar, Chowra, Teressa, and Bompoka, for shooting birds, chiefly pigeons, when perched on trees, where they are sometimes shot at a considerable height. The string of the bow is made of the fibre of the Gnetum gnemon (vide No. 145).
- 32 (m). Bel (a), Anh-chaka-bel (b). Toy bow (a), and arrow (b), as sometimes used by children in the Central Islands for shooting at birds, fish, and inanimate objects.

6. Articles of cocoanut shell, spathe and leaf.

- 33 (f). Hishōya (Car Nic. Hanòk-mat). Cocoanut-shell water-vessels, prepared by women (vide No. 122): made and used for fetching and storing water, chiefly for cooking and washing purposes. They are usually kept, suspended in pairs, on a stick, placed horizontally a few feet above the hut floor. In the Central Group the exterior surface of these utensils is polished with oil, or pig's fat, and blackened by means of smoke or soot. A cane-plaited loop connects each pair of shells. The hole for filling and emptying these vessels is formed by proreing and enlarging the soft uppermost "eye" of the nut. A strong man often varries 20 pairs of these shells, filled with water, on a pole over his shoulder, 10 pairs in front and 10 pairs behind.
- 34 (f). Hōh (Car Nic. Kūal-kūa). Large cocoanut-shell receptacle for holding tári (toddy). Similar objects are used by the women when collecting small shell-fish, which are placed in them: those so used are styled hōh-ta-momūang. A large cocoanut-shell is likewise used at all the islands, except the Southern Group for tapping tári from the cocoanut-tree spadix; it is then termed henwain-chaka-shiat.
- 35 (m). Hendīwa-toak (Car Nic. Hön-kaöt). Toddy (tárī) jug, consisting of a cocoanutshell with a thin bamboo spout: used for pouring filtered tárī (vide No. 45) into drinking cups.
- 36 (m). Hendiwa-dak (Car Nic. Endrüara). Funnel and filter, used when pouring water from a pitcher, etc., into a Hishoya (vide No. 33). The filtering medium consists merely of a piece of the ochres (fibrous stem-sheath) of the coccanut-leaf, and is renewed when foul.

- 37 (f). Hendiwa-ngaich (Car Nic. Nah-tawü). A similar object to No. 36, but smaller: used for filling a bottle, etc., with strained oil.
- 38 (f). Enfa or Taiyak (Car Nic. Chuk-nòm). Half a coconut-shell, used (1) as a drinking-cup: (2) as a basin to hold hot water when washing an infant, and then styled at Car Nicobar chuk-enchūn: (3) in kindling a fire, or for making a bright flame when dencing at night: (4) in lifting a pot off a fire by holding a half-shell in each hand, the rims pressed against the pot: and (5) as a mortar for pounding chillies (vide 115 and 10).
- 39 (m & f). Henhet-kas or Hancat-kolai (C. Nic. Fanòk-kari). Wooden or perforated coccoanut-shell ladle with wooden handle for serving out boiled meat, fish, rice, vegetables, etc., from the cooking-pot. The object of perforating the ladle is to strain off the gravy.
- 39 a. (m & f). Wah. Small cocoanut-shell, used at Teressa and Chowra for holding shell-lime for betel-chewing.
- 40 (m). Kanchuat-ok or Kanchuat-anha. Scratch-back or scratch-body. Consists usually of a circular piece of cocoanut-shell with serrated edges, and pieced through the centre with a stick to serve as a handle: used for relieving itch or irritation of the skin. Psoriesis and Ptyriasis are diseases common amongst Nicobarese of the Central Group.
- 41 (m Kanchüst-ngost. A piece of cocoanut-shell with serrated edges, in imitation of a f. f.). Capsa ragosa or Arca shell, which are generally used for the purpose noted below (vide No. 134). These are employed for the purpose of rasping the kernel of a ripe cocoanut, in order to form fine paste for the use of those who have few or no teeth, or preparatory to making oil. Cocoanut-paste is, however, made more rapidly by means of the kensēch (vide No. 89), but it is not then so fine as when made by the above method.
- 42 (m Chuk-palatewa. Ordinary hut-light, consisting of a small clam-shell filled with coccanut-oil, the wick being a thin twist of cotton cloth. On festive occasions this primitive lamp is placed in a coccanut-shell receptacle, attached to a large cane ring, from which it is suspended after the manner of a European hanging-lamp, whence the idea appears to have been borrowed.
- 43 (m). Chuk-katèk (Car Nic. Chuk-talehe). Parrot-stand, the bird being attached to the stand by means of a cocoanut-shell ring, which is pierced with a hole of sufficient dimensions to suit the size of the captive's leg. A half cocoanut-shell is fixed on the spike for holding food or water in the centre of the bar.
- 44 (*). Henhota (Cer Nic. Tasala-ta-kuchya). Slow-match, usually made by slitting the small spaths of the coccanut-tree into narrow shreds and binding them with fibre of the Guetum guemon (vide No. 145): used for lighting cigarettes or kindling a fire, when travelling or in a canoe.
- 45 (m). Henhet-took (C. Nic. Nam-kaöt). Täji-strainer, consisting of a piece of the echres (fibrous stem-sheath) of a coccanut-leaf, which is held over a täji-jug (vide No. 35), when filling it from a täji-pot (vide No. 34), or other utensil.
- 46 (f). Henhet-ngaich (Car Nic. Chancit-tawii). Similar object to No. 45, and used for straining occount-oil from impurities.
- 47 (f). Hembal-towils or Manus-towils. Cycss-paste strainer, made of the ochres (fibrous stem-sheeth) of the coccanut-leaf. Pounded kernel of the Cycas-fruit

(tewils), mixed with water, is placed in this strainer, and all superfluous moisture extracted by wringing and pressing on the entans-momus (vide No. 116). All that passes through is thrown away, and the rest is boiled and eaten with coccanut-paste.

- 48 (f). Hinong-lama-oal a. (lit., inner skirt): Hinong-lam-hōam b. or Hinong-hen-oal-lama-ok (lit., intermediate skirt): Hinong-lama-ok c. (lit., outer skirt). Skirts made of split coccoanut-leaf, and worn only by women, at Chowra, Teressa, and Bompoka.
 - a. is worn next to the skin both night and day: at night b. and c. are removed, and re-placed by a cotton skirt. As there is usually sufficient calice among the natives of Teressa and Bompoka, the women there are frequently able to dispense with the use of b. and c., which they don only when working in their gardens, or when fetching fire-wood, water, etc.
 - a. is generally about 5 inches deep, and is made of plain split leaf.
 - b. is usually about a foot deep, and consists of fine split leaf-work, and
 - c. the outermost skirt is likewise about 12 inches deep, and consists of partially split leaf, the unsplit portion being so arranged as to present two parallel bands a few inches apart; which, by way of ornament, are whitened with shell-lime and run horizontally throughout its length of about three feet, more or less, according to the size or requirements of the wearer.

The upper edge of these leaf-skirts consists of a stout cord to which the ends of the leaves are neatly attached, while the lower fringe of the leaves is evenly clipped. For fastening them round the waist, short pieces of cord are provided at the upper ends, and these are tied between the hip and the middle-front of the body. They are sometimes made to overlap at the ends by several inches, in which case two additional pieces of twine are provided for fastening purposes.

- 48 a. (1). Openiap. (Car Nic. Kinfan). Skirt about 6 feet long, worn folded by females: generally of blue calico. It is usually fastened at the waist and extends to a little below the knees. At Car Nicobar, when strangers arrive, the cloth is unfolded to its full width and worn fastened above the breasts; but, at the Central and Southern Groups, at such times a second cloth is instead thrown over the shoulders, so long as strangers are present. This covers the shoulders and breast, and is styled hendongs-shi-toah.
- 48 b. (m). Meng. (Chowra, Kinwan; Car Nic. Kinst). Loin-cloth, worn by males: generally of red calico. The full size is about 6 feet long and 4 to 6 inches wide. This, in the Central and Southern Groups, is folded to a width of about 14 inches. In donning this scant attire, one end is held at the pubes, and the remainder drawn back between the thighs and over the genitals so as to conceal them under the perineum. The band is then brought round from behind across the hip to the front, where it is fastened to the end at the pubes; the remaining portion is taken round the other hip to the os coccyz, where a second knot secures it in position, and leaves about 15 inches dangling like a tail behind. Now-s-days at the Central Group, the above description of neng is usually worn only by old men, the young and middle-aged having adopted one which is about 12 feet long and folded to a width of 21 inches. With the extra length, the wearer is enabled to pass the band a second time round the body across the abdomen after making the fastening at the os coccyn; finally, instead of a tail-like appendage at the back, a loop is formed from the os cocoys to the left hip, from which the remaining length of the band (about 18 inches) is allowed to hang. At Car Nicobar and Chowra the loin-cloth is

about 6 feet long and folded to a width of only \$\frac{3}{6}\$ths of an inch: one end, to a length of about 18 inches, is then stitched and forms the tail-end of the garment, which is worn much after the fashion above described, the only distinction being that the genitals are less tightly enveloped. The tail is generally tucked under the band at the left hip, so as not to dangle behind.

49 (m). Pal-ta-chūma (Car Nic. Ta-nyukla). Cocoanut-leaf torch, used when spearing fish at night.

7. Articles of other palms.

- 50 (m Shindung-kōi (Car Nic. Endrū). Screen, made of the leaves of the Nipa fruticans, § f). and used in the Southern Group for covering the head and back when exposed to rain.
- 51 (f). Losh-hilüs (a) (Car Nic. Châmòm). Homyūsm (b) or Danap-osl-hilüs. Hichih (c) (Car Nic. Tranop).
 - (a) is the spathe of one of the three Areca palms (viz., the Orania or Bentinckia Nicobarica), common in the islands. The spathes of the other two varieties found in the islands are smaller, and less useful.
 - (b) consists of one of the spathes of the hilüa, trimmed at its two ends and flattened, so as to serve as a sleeping mat. The inner and lighter-colored side is placed uppermost on the floor for this purpose. A small uneven number (3, 5, 7 or 9) of these spathes are wrapped round a corpse prior to burial.
 - (c) consists of two homyusm, stitched together at one side to serve as a screen when exposed to rain.
- 52 (m Hannöi (Car Nic. Hanūi). Fan, made of Areca-spathe and used for kindling or \$f). fanning a fire when cooking, and for fanning the face in oppressive weather, or in order to drive away mosquitoes, etc.
- 53 (m Tan-shula or Tafol (Car Nic. Ta-silla). Box, made of Areca-spathe in common & f). use throughout the islands for holding cloth, clothes, etc.
- 54 (f). Kenoang. Arecs-spathe receptacle, made and used in the Central and Southern Groups for holding betel-nuts, shell-lime, and chavica leaves for chewing.
- 55 (f). Chuk-tanāla or Chuk-hendo. Areca-spathe basket, or Pandanus-leaf receptacle, for containing betel-aut, shell-lime, and chavica leaves: used chiefly at Teressa Island. At Car Nicobar Burmese lacquered boxes Nic. Tanāp (vide No. 156) are mostly used.
- 56 (m Timä. Arecs spathe bucket, used when bathing.
 4 f).
- 57 (m Tanechya. Areca-spathe receptacle made for the use of hatching fowls. In f. f.). place of grass, a certain kind of leaf is placed inside. At Car Nicobar a Chowramade pot, or a tan-shula (vide No. 53), is used for this purpose.
- 56 (s. Detynak er Pakal. Feeding dish, made of a spathe of the Pinenga Manii (Nic. \$7). Okuhusk). A similar object is made by the Shom Pen of the bark of a certain tree.
- 58 a. (se Daiyuak-towila. Areco-spathe receptacle in which uncooked Cycas-paste is \$ f). kept.
- 58 b. (a Daiyuak-homlem. Arees spathe receptacle in which cooked Cyces-paste is

AND THE CONTRACT OF THE CONTRA

59 (f). Chuk ok-hiyä. Arca-spathe receptacle for collecting the refuse of betch-husks, after extracting the kernels for chewing. A superior variety made of wicker-work and provided with an outer tray for the husked nut is sometimes used, the large inner receptacle being for the husks only.

8. Articles of pandanus leaf.

- 60 (m Shanōang (Car Nic. Tachökla). Ornamental head-band made of Pandanus-leaf, worn & f). on the head by both sexes, usually on festive occasions. At Car Nicobar it is always, and at Chowra and Teressa sometimes, made of the spathe of the Areca catechu.
- 60 a. (m Kupòt-sinpai. Pandanus-leaf head-ornament, made by Car Nicobar women and & f). occasionally worn by both sexes.
- 61 (f). Kenòp-kōi-haushòi. Dome-shaped cover made of Pandanus-leaves and placed over the kenyūa-kōi-haushòi (vide No. 111) when boiling Pandanus, Cycas-paste, or vegetables. At Car Nicobar a wicker-work cover is used for the purpose.
- 62 (f). Enrung. Pandanus-leaf receptacle, used at Car Nicobar for holding chewing materials, when making distant trips in a canoe, or on feast days.
- 63 (f). Hannâh-lâh. Foot-brush, used in the Central and Southern Islands for wiping the feet on entering a hut: consists of Pandanus-drupe from which the pulp has been extracted. One or two are usually kept at the entrance of every hut for the use of visitors and others. At the Northern Islands the hut-broom (vide No. 96) is employed for wiping the feet.
- 64 (m). Kentain (Car Nic. Kensach). Fire-sticks, used at all the islands, but chiefly at the Central and Southern Groups, for producing fire. Both the upper and the lower (styled male and female respectively) are sticks cut from the Melochia velatina (vide No. 144). The working-end of the upper stick is rounded, and a splinter inserted in the fine hollow space in the centre, which would otherwise wear away before the necessary amount of friction had been produced. Instead of this, the end of the stick is sometimes slightly cross-split, which causes increase of friction when in use. The lower stick is notched near one end and a small hollow formed in its centre, into which the prepared end of the upper stick is placed and twirled with both hands, during which the lower stick is held firmly down by one or both feet. A blade, or peg, is also sometimes stuck into the side of the lower stick to keep it in position during the operation. On the part to which friction is applied fine ask is sprinkled and, beneath this, dry cocoanut-husk fibre, or paper, is placed as tinder.

(To be continued.)

A VERSION OF THE GUGA LEGEND 1

BY W. CROOKE, C.S.

During the reign of Prithivi Raja, Chanhan of Dehli, there ruled in Maradése, now Ragara, of the Hissar District, a Raja named Mar Siúh, or Mar Siúh, to whom was born a son named Jôwar. When the boy grew up he was married to the Rant Bachhal, daughter of Kañwar Pal, who ruled at Sirsa Patan, now a mass of ruins near the town of Rôhar, in Pargana Afadigara of the Bijnôr District. The marriage was performed with great magnificence, and much money was spent by the father of the bride in the dowry and in entertaining the marriage greats. The bride accompanied har husband to his house, and they lived together for some years, but the Almighty did not bless them with offspring. In despair the prince Jówar went into the livest and began to practice amsterities. Meanwhile the Rant Bachhal occupied herself in fasting and deeds of charity at home. After some time the great saint Gura Gorakhnath with fourteen

¹ Told by Bhill Rhagat of Ribbri, Bijnie District, and literally translated.

³ Bigart is the Bigar or peairie of the Mestern Panjib and Northern Elipstical.

hundred disciples, in a course of pilgrimage to various shrines and holy places; came to Bâgarâ. When she heard of his arrival, the Rânî Bâchhal presented herself before him, and begged him to take up his residence in her city, where she promised to attend upon him. The Gurû replied that he was a saint and could not make a long stay there. The Rânî when she heard this fell at his feet and wept, and Kânî Pawâ, who was the senior of his disciples, begged him to stay there and practise wôge.

Gôrakhnāth agreed and halted with his disciples in a garden near the city. The Rânî Bâchhal placed her treasury at his disposal and every day presented him with a golden dish filled with the choicest food. When a year had passed in this way and the Rânî ceased her daily visit, Gurû Gôrakhnāth made preparations for his departure. Kânî Pawâ went to the Rânî and told her that Gôrakhnāth would start very early next morning, and he advised her to be in attendance. Her sister Achhal overheard this conversation, and in the night she went to the Rânî Bâchhal and asked her to lend her some choice clothes and jewellery, as she wished to receive some guests. The Rânî Bâchhal answered: — "My clothes and jewels are pure because I wear them when I do worship. You can have any other clothes and jewels but these." Âchhal refused to accept any other clothes and jewels, and promised to return them before her sister would want them for worship. So Bâchhal lent them and the gold dish to her. Next morning Âchhal, wearing the clothes of Bâchhal and covering her face, appeared before Gurû Gôrakhnâth who, when he saw her. said:—

"My daughter! Why dost thou cover thy face?"

She answered: — "Since the saints have come here I daily prepare food for them with my own hands. My eyes have in this work become affected by the smoke and I am compelled to wear a veil."

Gorakhnath took the dish from her hands and ate the contents. Then he took out from his bag two grains of barley and handing them over to Achhal said:—

"Wash them and then eat them at once."

She did as he directed and returned home.³ She returned the dish and the dresses to Bachhal.

Meanwhile Gurû Gôrakhnâth blew his horn and marched with the body of his disciples. But the disciple, Kânî Pawâ, knew that the Bânî Bâchhal had been deceived by her sister; so he began to cry and roll on the ground, pretending that he was attacked by a violent colic. As Kânî Pawâ was very dear to Gôrakhnâth, the saint stopped and began to smear his body with consecrated ashes as a remedy. In the meantime Bânî Bâchhal arrived and, after saluting Gôrakhnâth, began to pray to him. She then laid the dish before him. Gôrakhnâth cried:—

"Turn out the impostor and beat her soundly. She has just received from me two grains of barley and she has come again."

The disciples began to beat the Rant Bachhal; but Kant Pawa said: —

"You have devoured the whole of her treasure and are now beating her. What justice is this?"

Görakhnäth then enquired from the chief disciple what the truth of the matter was, and he told him the whole case. Görakhnäth asked what he was to do. Kânî Pawâ answered:—

"O Mahirti! On this matter being known, the saints will be held in contempt. You must bless the Rini Bickhal also."

Then Gérakhnáth spread a sheet and lay down upon it. On this he ascended to the throne of Blagwan, and when he saluted Bhagwan the god asked:—

"O saint, what has caused you to come here?"

Gürakhnáth replied : — "Give a son to Rân! Báchhal of Bâgaṛā."

^{*} For instances of such charms in harronness see my Introduction to Popular Religion and Folklore, p. 148.

* Vide op. olt. p. 210.

* With this part of the legand compare the story of Jacob and Esan.

Bhagwan answered: - "To have a son is not written in the tate of the Rani."

Görakhnäth replied : -- "Had a son been written in her fate, I would not have come to you."

Hearing this Bhagwan rubbed some of the dirt out of his head and gave it to Görakhnüth, and the saint brought it back to the Rani and gave it to her. The Rani mixed it in water and shared it equally between a gray mare, a Brahmani, a sweeper's wife, and herself. All of those had been hitherto barren, but immediately they all conceived.

Now those who were her enemies went to Amar Sinh and poisoned his heart against the Rant Bachhal and said:—

"O Råja! Your daughter-in-law has become in child by one of the saints. So if you wish to save her honour you must send her at once to the house of her mother."

The Râja believed their words and sent the Rânî Bâchhal to the house of Kumâr Pâl, who was usually called Kanwar Pâl.

When the embryo was seven months old it spake from the womb of its mother and said:—"Take me from the house of my grandfather and remove me to the house of my father, for if I am born here I shall be called Nanwar."

The Rant Bachhal was in child and she had no means of conveyance. So she had much hesitation in complying with the orders of the coming child.

But the embryo spake again and said: — "Mother! Hesitate not, but go to the crippled carpenter and he will make a cart for you."

The Rani went to the carpenter and asked him to do this for her.

He answered: - "I am a cripple. How can I do this for you?"

But the embryo spake and ordered him to arise from the seat, from which he had not moved for many years. He arose at once and made the cart as Rânî Bâchhal desired.

Even in the womb the child began to work wonders and tying up his mother's father, hand and foot, they started for Bûgaşã. On the way he forced Bâja Vâsuki, the lord of the snakes, to do him homage and acknowledge his power by doing the worship known as kandúrí. He made his mother's father also co ess his power and do the same worship to him. And when he reached his home, his father's father was forced to do homage.

Finally, at the due time, he was born under the title of Zāhir Pīr. 10 At the same time to the Brāhmani woman, who had eaten the dirt of Bhagwan, was born Nara Sinha Pānrē; to the sweeper's wife Patiyā Chamār; and to the gray mare was born Bachhrā, or the Colt. All three began to grow by leaps and bounds. Zāhir Dīwān began to hunt in the jungle. One day in the course of his hunting he happened to go to Būndī, and halted in the garden of Rāja Sanjai. The Rāja's daughter, the Rānī Surail, happened to be in the garden with her companions. Zāhir Dīwān entered into conversation with her and began to play at dice with her. 11 At first the Rānī won all the goods, and finally even the person, of Zāhir Dīwān. He asked her leave to go and bathe, as he was her slaye. While he was bathing, he remembered the name of Gōrakhnāth, and then the seat on which the saint rested was moved. Some one came and put some dice in the waist-cloth of Zāhir Dīwān unawares. When Zāhir Dīwān was putting on the cloth he felt the dice. In great delight he went back to the Rānī and asked her to play a second game with him. She agreed and this time Zāhir Dīwān won back all his goods and the Rānī as well. On this he commenced to start for his home, but the Rānī Surail begged him to take her with him.

[•] The ascetic shows his superiority over, and even contempt for, the greater gods.

The Saint Apparent.

II This is a stock incident in the folktales: see Introduction to Fogular Religion and Folklors, p. 291.

He answered: - "If I take thee unmarried both thou and I will come to shame."

"But," she said, "If the signs of betrothal he sent, I trust thou wilt not refuse them."

He promised that he would accept them. So Zâhir Dîwân returned home, but he did not forget the Râni Surail.

To the Rânî Âchhal, who had received the two grains of barley from Gurû Gôrakhnâth, two sons were born at the same time — Surjan and Arjun. They were of the same age as Zâhir Dîwân. Now when the Râja of Bûndî sent his Brâhman and barber to perform the betrothal rite between his daughter and Zâhir Dîwân the brothers forbade the rite, as there was an old gruêge between their family and that of the Râja of Bûndî. But before they left the Râni Sarail had strictly warned the Brâhman and barber that they should on no pretence betroth her to any but Zâhir Dîwân. So they went to the Râja Amar Sinh, who treated them with great kindness and asked the cause of their coming. They said that they had come to betroth his grandson to the daughter of the Râja of Bûndî. On hearing this Amar Sinh put his hands to his ears\(^12\) and said:—

"I regret that I cannot betroth my grandson to the Bûndî Rânî, because I have an here-ditary enmity with her father."

The Brahman and the barber left the place at once and on the way they met Zahir Dîwan. When they told him the result of their mission he said:—

"I am the grandson of Amar Sinh it is true; but what have I to do with that old dotard? Give the signs of betrothal to me."

The Brahman hesitated, but the barber spake out:—"O Kanwar Sahib! betrothal is not performed in this fashion."

At this Zâhir Dîwân smote the barber on the back with his whip and he rolled on the ground.

The Brâhman then said: — "Mahârâj! The barber was not altogether wrong. At the least some of your kinsfolk are needed for the betrothal."

Then Zâhir Dîwân invoked the saint Gôrakhnâth, and, as he prayed, the seat of the Gurû was shaken, and he at once started with a troop of his followers and reached the place.

But the Brahman spake: — "Sadhus are not recognised as due witnesses of the rite of betrothal."

So Zâhir Dîwân invoked the aid of Mahâdêva and Indra and they at once appeared, and there, even in the jungle, the rite of betrothal was duly accomplished. Gôrakhnâth gave to the Brâhman and the barber his consecrated ashes, and Zâhir Dîwân informed them that his marriage procession would start on the ninth of the dark fortnight of Bhâdôn. The Brâhman and the barber then started and the gods returned to their heaven.

When the Brâhman and the barber reached Bûndî they opened the parcel of consecrated ashes which Gôrakhnâth had given them, and found that the ashes had been turned into gems. When the Râja of Bûndî heard that the betrothal had been performed he was wroth and beat the Brâhman and the barber almost to death. Hearing their cries, the Rânî Surail came into the Court, and seizing her father by the hand said:—

"Father, it is a deadly sin to kill a Brâhman. Do not kill him. What has been done cannot be undone even by Paramêswar himself."

The Raja came to his senses and the Rani Surail took the Brahman into her private apartments and loaded him with presents. Next day the Brahman and the barber explained to the Raja all that had happened in the jungle, and informed him that the marriage procession would arrive on the ninth night of the dark fortnight of Bhadoù. The Raja hearing this was filled with anxiety, reflecting what arrangements he could make in the rainy season. But his ministers comforted him by saying that where wealth abounded all was possible.

Meanwhile Zâhir Dîwân took all the articles he had received at the time of betrothal and gave them to his mother, the Rânî Bâchhal, and informed her of the date of the wedding. The Rânî in her turn went to her father-in-law, the Râja Amar Sinh, and informed him of all she had heard from her son, and laid the presents of betrothal before him.

He answered: —"I cannot perform this marriage at this time. I will not go to the house and therefore I rejected the betrothal."

Hearing this the Rani Bachhal wept and returned to her own apartments. She then called Nara Sinha Panra and sent him to tell her father to attend the wedding. He went to Sirsa Patan and placed the invitation, which consisted of a letter, gold coins, a cocoanut, red powder, holy rice and sweetmeats before the Raja Kanwar Pal, and to him the Panra said:—

"The marriage of your grandson will take place on such and such a day. Your daughter has sent me to inform you that her father-in-law has refused to take any part in the ceremony. Everything then depends on your generosity. So you must go and get the marriage of your grandson duly performed."

Kanwar Pûl replied: — "I will send all that is needful, but I will not take part in the procession."

Then Nara Sinka Panie returned to the Rani Bachhal and said: — "No one agrees to take part in the marriage. Your father has also refused to join the procession. Now except your-self there is none to help your son."

The Rini Bachhal then began to weep and said: — "Alas for my dear husband! Had he been here he would have arranged everything, and I should have been spared the trouble which has now fallen upon me."

Then Zahir Diwan answered and spake: — "Mother! Why dost thou weep? If the Gurû Gôrakhnath is still alive I shall bring my bride not alone without disgrace, but with all due honour."

He then went out of the city and was absorbed in reflection on his Gurû, and on this the seat of the Gurû Gôrakhnâth was shaken.

And he said to his disciple Kânî Pawâ: — "Let us govand complete the marriage of thy brother Zâhir Dîwân."

Then Gurû Gôrakhnath came with fourteen hundred disciples to Bagara. Zahir Diwan went out to receive them and told Gôrakhnath all that had occurred.

Gurû Gôrakhnâth said :-- "Be not troubled in your mind. I will make all the arrangements."

Then he took a pinch of ashes from his bag and rubbed it, and lo! all the articles and supplies required for the marriage — food and clothes and jewelry and equipage such as the eye of man had never seen, — were prepared. Also Görakhnáth invited the Baja Indra, who came with all his sons. With him came Parvati and Raja Vasuki.

When the procession was arranged Görakhnäth said to the Rani Bachhal: — "My daughter! It is now thy part to decorate thy son with clothes and jewels, as it is time for us to start for the house of his father-in-law."

Then for the bathing of the bridegroom there came a golden pitcher from Indrasan, the home of the fairies. The youth was bathed and dressed with all magnificence. And the Râja Vâsuki with his own hands invested him with the marriage robes, and the wedding crown was placed upon his head. Then came all the fairies of the court of Râja Indra¹³ and danced before him. The heavenly musicians began to play, and when Râja Amar Siâh saw these divine arrangements he was smitten with shame. and he, too, came and joined in the marriage, and Râjâ Kañwar Pâl also arrived with all his equipage. So the marriage procession started and in a few days reached Bûndî.

Now near the city of Bundi there was a lake, which was swollen by the rains of Autumn, and they were considering how the procession was to cross it, when Hanuman arrived and said that he would lie down over it and all could cross on him.

But Rija Vasuki said: — "Why should you take all this trouble? I will prepare a bibige at once."

So saying he called all his mighty snakes and, twining them together, made a bridge neress the water. The people of Bûndî came out to see the procession, and those who were enviews of Zahir Dîwân said that none but Sâdhus were in his party. When he heard this the Rija of Bûndî was wroth and he paid no respect to the procession. Then Zâhir Dîwân critered the Râja Vâsukî to surround the city and lo! an army of snakes appeared and corrounded the walls and every house in the city of Bûndî. They were ordered to hurt no one, but the people of the city were sore afraid. They all raised cries of terror. Then the Raja of Bûndî with all his ministers and priests went to Zâhir Dîwân and fell at his fect. On this Zâhir Dîwân made a sign to Râja Vâsukî to recall his snakes and they forthwith disappeared. On this the fears of the people ceased.

The wedding guests were invited to the marriage feast. With the guests came Sukra and Sanischara, 14 and the Raja took them to his palace and ordered food to be served. The servers of the dishes could not satisfy their hunger with the cooked provisions, all of which they consumed. Then they said:—"Take us to the store-rooms," and there they devoured all the supplies collected for the wedding. Nay they even ate the earth of the place two fingers deep. Even then they cried for more and the Raja of Bandî was smitten with shame because he could provide no more.

Then he came and fell before Zâhir Dîwân and said : — "Pardon me, my Lord! I can no longer vie with thee."

So Gorakhnath gave the Raja a pinch of his ashes and told him to place it in his store-rooms and lo! they were again filled with all manner of commodities. So the wedding guests were fed and none lacked aught.

The wedding party stayed there many days and the Raja of Bûndî gave Zâhir Dîwân as dowry many valuables and costly jewels. So they returned home and came to Bâgarâ.

One day, after the marriage was over, Zâhir Dîwân went into the jungle to hunt and for the same purpose Sarjan and Arjun also came there. Zâhir Dîwân and the two brothers shot at the same deer. The animal fell on the ground.

Zâhir Dîwân took possession of the game, but the brothers said : — "It is we who have shot the deer."

But Zahir Diwan would not give them even a share of the deer.

Then they said: —"We will take half of the kingdem because your mother and ours are sisters, and your wife we shall also seize, because it was to us that her father sent the signs of betrothal. You are a mere usurper."

When he heard these threats Zâhir Dîwân grew wroth, and it came into his mind to get rid of the brothers once for all. But they fled from before him and went and laid a complaint against him before the king of Dehlî. When he heard their charge Prithivî Râja attacked Zâhir Dîwân with a mighty army. The cattle of Zâhir Dîwân were returning from the jungle and Prithivî Râja ordered his men to seize them. They did so and the cowherds came to Zâhir Dîwân and told him what had happened.

When she heard of these events the Rani Bachhal hastened to Zahir Diwan and entreated him not to face the enemy. But he was filled with wrath. At once he bathed and saddled his horse and put on his arms and armour.

AND THE PARTY OF T

Then he rose up and he said to his horse: - "Thou gray one! This is not the day to turn thy back on the foe."

The Rani Bachhal rushed on the battlements and cried: - "My Zahir is going alone to face the enemy!"

Then many a brave warrior hastened to help him, but he turned them all back save Nara Sinha Pângê and Patiyâ Chamâr. When he saw them behind him, Zâhir Diwan said:—

"Even you I cannot take with me till I test your prowess. I will fix my spear in the ground and he that can take it out may follow me."

Both of them succeeded in taking out the spear and they followed their master. As a lion in a pack of jackals, so they fell upon the foc. Nara Siaha Panga and Patiya Chamar killed many of the enemy, but at last they fell. Then Zahir Diwan commenced to cut down the enemy and at last they took to flight. Zahir Diwan transfixed Surjan with an arrow and he died, on which Arjun began to cry like a child. Him, too, Zahir Diwan killed. Then he pursued Prithivi Raja and seized him by the scalp-lock. He turned his saddle round and tied him on his horse with his face towards the tail, and so he dismissed him with contempt. Then he cut off the heads of the twin brethren and tied them in his handkerchief and took their gem necklaces. Thus he returned in triumph.

When he arrived, the **Bani Bachhal** his mother appeared with a golden dish, on which was a lamp with four wicks and moving it over his head¹⁵ asked the result of the fight.

Zähir Diwan answered: - "The twin brethren have won and I am worsted."

Again the Rani said : - "Tell me the plain truth."

He replied: -- "No battle was fought and still the quarrel was decided."

On this he took out the necklaces of gems and shewed them to her. Her heart began to beat. Next he opened the handkerchief and shewed her the severed heads. She threw the golden dish on the ground, and he said:—

"Mother, now recognise which is the head of Sarjan and which that of Arjun."

She recognised the heads and said:—"Dost thou shew thy pride by killing thy brethren? Dost thou not feel ashamed and disgraced?"

When he heard these words, Zâhir Diwân turned his back upon his mother and went into the jungle.

Then came the month of Sawan, when newly married brides put on gorgeous apparel and swing beneath the trees. But the Rani Surail, wife of Zahir Diwan, did naught but weep and lament, being separated from her beloved. Then Zahir Diwan said to his horse Nila:—

"Let us go and see thy brother's wife, who is weeping for thy brother."

He came to the gate at night and called to the guards: - "Open."

The guard replied: "Who art thou - a thief or a demon?"

He answered: — "Open the door. I am the house-master." The guard replied: — "I will not open the door at night."

"One day," answered Zâhir Dîwân, 'I will cut thy flesh from off thy bones."

And so he returned to the forest.

At this time the **Bani Surail** saw in a dream that her husband had arrived, and that her watchman would not open the door. In the morning she told him her dream and the watchman wept:—

"How could I know that he would come? A man came at night and I dared not open the door. Alas for me!"

On this the Rani wept and next night she sat close to the door, and at the same hour her husband came as before and called to the guard.

The Rant cried: - " Who art thou that comest in the dead of night?"

Zahir Diwan answered: - "I am the house-master."

She said: - "If you are the house-master come in by making your horse jump over the roof."

Hearing these words he spurred his horse and jumped over the roof, and alighted in the courtyard. The maid-servant tied up the horse and gave food to her master. The Rânî Surail fell at his feet and wept, and brought water to bathe him. Then they began to play at dice. When the night was far spent Zâhir went away, promising to return soon.

In this way for some time he used to visit his Rani by night. The Rani used to sleep by day, and at night she decorated herself to receive him. Then the news spread in the city that some one used to visit the Rani Surail by night. So the Rani Bachhal went to the Rani Surail, and found her daughter-in-law in child.

·She said: - "Why hast thou committed so great a wrong to my son?"

She answered: - "I have done no wrong. My husband is alive."

But the Rant Bachhal would not believe her. Then the Rant Surail said: --

"Why do you not believe me? Your son is alive and he visits me every night."

The Rani Bachhal prayed: - "Let me see him once."

She answered: -- "Come here at night and you shall see him."

So the Rani Bachhal came by night to the house of the Rani Surail and saw her son; but when his eye fell upon his mother he veiled his face and mounting his horse departed.¹⁷ His mother and wife followed him crying—

"Why art thou leaving us?"

But he turned a deaf ear to their voice. The Rant Surail, however, soon overtook him and seized the rein of his horse. Zahir Diwan then thought of his Guru Goraknath and descended below the earth. The wretched women returned home and lamented him bitterly.

Now the place where Zahir Diwan descended below the earth is at a distance of nine kos from Nur and twenty-seven kos from Hissar. And many pilgrims visit the place where his tomb is erected. It is known as Zahir Diwan ke nana ka ujara khera—The deserted mound of the grandfather of Zahir Diwan. There multitudes of men assemble in the month of Bhâdoù. Besides this, in many villages, are platforms raised in his honour.

Note.

This is a very complete and interesting legend of the life of Zâhir Dîwân and shews all through a good deal of fine, natural, chivalrous feeling. The high position women take in it is noticeable. It runs on different lines from that given by Major Temple in Legends of the Panjdb, Vol. I. p. 121, ff. I have given a short account of Gugâ and quoted some of the literature on the subject in my Introduction to Popular Religion and Folklore, p. 133 sq. [In Vol. III. p. 261 ff. of the Legends I give a long version of the Gûgâ story, which runs much on the lines of Mr. Crooke's valuable version. I also recognize many bits of stories in the above legend, which are often fastened on to other heroes. E. g., Vâsuki is connected with Ghârî Sâlâr in the Legends, Vol. I. p. 117 ff., and the doings of the serpents at Bûndî may be compared with their doings at Safîdôû in connection with the modern version of the story of Parikshit and Janamêjaya (Legends, Vol. I. p. 418 ff.) The conversation of Gûgâ with Surail in comparable with that between Râja Rasâlû and various women he is mixed up with (Legends, Vol. I. p. 50 ff., 209 ff., etc., vide index). In the Legends, Vol. I. p. 166 ff., I give another version of the story of Gûgâ and the Brahmayî. — Ed.]

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., LC.S.

(Continued from v. 32.)

(c) Metals.

HE class of articles, which, next to fire and water, have special power over spirits, are metals, Among the metals which have power over spirits, copper, lead and gold, are noticed, but the most important is iron. 100c In all cases of seizures and swooning iron is of great value, either applied hot, or as a lancet to let blood. This seems to be the base of the almost universal belief that iron has great power over spirits. So the Vaishnavas stamp their bodies with red-hot iron seals, and when the body of a pregnant woman is carried out of a Hindu house, a nail or a horse-shoe is driven into the threshold to bar the spirit from coming back. Among the Prabhûs of Bombay, after the birth of a child, an iron bar is thrust across the door of the lyingin room, and a pen-knife is placed under the mother's bed to ward off evil spirits. 1005 The first thing a Bombay Prabhû looks at after waking is a gold ring. The Kunbîs of Kôlâbâ put an iron hook, or poker, under the cot of a lying-in woman to keep off evil spirits.3 The belief that spirits are afraid of iron is so strong among the Kôlis, Vâdvals and other lower classes of Thana, that whenever they go at night to their fields or gardens they keep with them a stick with loose iron rings to frighten evil spirits.3 Among the Vadvals, or gardeners of Thana, an iron bar is laid across the threshold of the lying-in room, in order that the evil spirits may not come inside.4 When a Hindu child is taken to visit a relation, copper or silver coin is put into its hand at the time of leave-taking.5 During a thunder-storm Könkani Marathas throw their axes and sickles out of doors to scare the lightning. Among the Bombay Parsis, women in child-bed are made to lie on an iron bed-stead for forty days, and the dead are carried on an iron bier.7 The Parsa women in their monthly sickness are fed from an iron dish.8 In Gujarat Mâtiâ Kunbî women, for a fortnight after a birth, never go out without carrying a knife or a sickle. The Bhâts of Gujarât set a dagger near the new-born child on the fifth evening when the chhat's spirit is believed to come. A dagger and a sword are laid in the Bhâtiâ woman's lyingin room. Among Gujarut Sravaks the bridegroom carries, for fourteen days before the wedding, a sword. In Kâthîawâr gold and curds are put into the dying Râjpût's mouth. 10 In Gujarât the Musalmân bridegroom carries a poignard and the Musalmân bride a knife.11 The Dekban Râmôéls, after a birth, set up in the lying-in room a needle or an arrow in a millet stalk, and at their weddings the bridegroom holds a dagger in one hand and a friend holds a sword over his head.12 The Kunbis of Poons on the Dasahra day worship iron tools,13 and they use hot iron as a cure in certain complaints.14 The Pardesi Bhadbhujas of Poons tie a piece of iron, about the size of a shilling, to the boy's and the girl's wrists at the time of marriage. 15 The Telugu Nhavis of Poons lay the new-born child by its mother, and at the head of the bed set a dagger, a lemon, and a cane.16 Among the Nasik Malls if a woman dies in child-bed, as the body leaves the house, a horse-shoe is driven into the threshold, and while carrying the bier ralk grain is strewn on the ground that the spirit may not come back.17 In the possession of the Mahârâjâ of Kôlhâpur is a gold mohar, and when a woman is in labour, water is poured over the mohar and given her to drink.18 The Kölhapur Lingayata, on the way to the burial-ground, at intervals

¹⁰⁰a The Parsts in some cases purified a man from a lead ladle (Vondiddd, Vol. IV. pp. 40-43). Burton (1621, Anatomy of Melancholy, p. 435) says gold is an antidote to spirits, and gold rings are worn to keep spirits away. Of the use of copper coins and of bells examples are given below,

acatter betel leaves and copper coins.19 Among the Dhârwâr Lingâyats, before the body is burned, twenty-one small pieces of copper with some religious words written on them are hid on the body.20 That the origin of iron as a spirit scarer lies in its value in cases of actual cautery finds support in the practice prevalent among the Dharwar Masalars of branding new-born children with a red-hot needle in the form of a cross.21 Among the Madhav Brahmans of Dharwar, when a woman suffers much during child-birth, old gold coins are washed, and the water is given her to drink.22 The Bijapur Radis lay copper coins on the spot where the funeral pyre is built.23 The Beni-Isra'ils of Western India lay a knife under a babe's pillow to keep off spirits.24 The Gonds have a god called Chuda Pen in the form of an iron bracelet.25 At Good marriages copper coins are waved round the bridegroom's head and coins are worshipped by the Gaiti Gonds.26 The Orâons lav a coin in the mouth of the dead,27 originally to keep the spirit from leaving the body.28 The Greeks and illomans continued the practise, explaining it by saying the coin was to pay Charon.29 In Bengal, when the father sees the new-born child for the first time he puts money in its hands.30 The arrow heads and other iron weapons, found in rude stone tombs in the Nilgiris, seem placed there with the object of keeping off evil spirits, not for the use of the dead.31

The Cannii, an ancient nation of Lesser Asia, at certain seasons met in armour and beat the air with lances and went to the boundary to drive away foreign spirits.32 When an Arab sees a whirlwind he says :- " Hadid, hadid, nú mash um," - that is, "Iron, iron, oh thou vile one!"33

Among the Burmans, if a woman gives birth to a still-born child, a piece of iron is placed in the cloth in which the body is wrapped, and at the burial a member of the family says: - "Never return to thy mother's womb till this metal becomes soft as down."34 The ascetics or hermits in Burma carry an iron staff hung with rings.35 The Burmans put pellets of gold under the skin to he wound-proof.36 The Siam king's sword is dipped into holy water, and the water is drunk by the king at the time of coronation.37 The Chinese authorities objected to the Shanghai-Woosung Railway because it would disturb the spirits of the earth and the air, and so lower the value of property.28 When a Chinese child is sick, it is carried along the street by the mother, who drops coins at every ten paces, or, if the child is very bad, its body is rubbed with the coins and they are thrown into the street,39 In China, when a person is sick of a devil-sent epidemic, a sword, if possible a sword which has ent off a criminal's head, is hung over his bed,40 and coins, generally pierced coins, are worn as charms.41 A sword is a sacred emblem in Japan kept in the temple of Atsuta.42

In North-West Africa Musalman women, when pregnant, often sit on an old iron gun to be relieved of dangers of child-birth.43

A queen in South Africa, says Dr. Livingstone, had a number of iron rings on her ankles with little bits of sheet iron fixed to them.44 In North Africa, the fire doctor generally keeps

The great god of the Central Province Gaitl Gonds is a pice in a hollow piece of bamboo. A space, a foot square, is cleared at the foot of some holy tree, the pice is brought in its bamboo case, taken out and laid on the ground. Heaps of rice, a heap for each deity they worship, are arranged round the pice : chickens and goats (formerly cows were offered) are fed on the rice, killed, and their blood sprinkled between the pice and the rice. On the blood liquor is poured. The pice is then put in the case [Hislop's Aboriginal Tribes of the Central Provinces, p. 22].

with him a small charcoal fire, a pair of bellows and some iron rods. When a patient thinks himself bewitched, the doctor makes him lie down, pulls aside the clothes from his back, and, making his rod of iron red-hot, draws it with a hissing sound across the back and loins of the sick person in the name of God.45 Actual cautery with a red hot iron is a favourite remedy with the Moors.46 In Madagascar the chief post of the house has a silver chain fastened to it.47

So great is the power of iron over spirits, that the guardian spirit in fire must not be touched with a sword or iron. So the Tartars would not (1246) touch fire with a knife. Pythagoras (B. C. 600) said that fire should not be stirred with a sword.48 The same belief occurs in North-East Asia and North America. In Russia to break faggots with a poker might cause an ancestor to fall into hell, - that is, might drive away the guardian ancestral spirit from his hearth-home.49 A similar reason may explain why the Romans would not cut certain plants with a knife, and why religious monuments were long made of undressed stone. The Romans believed that if an iron spike was driven in the ground, where a person was attacked by the falling sickness, he would never be again seized. The Romans kent a javelin in a lying-in room to give the mother easy delivery.⁵¹ and drove large coffin nails in the side-posts of doors to drive off spirits.52 Any one finding a cast horse-shoe in the road, and laving it up, will be cured of the yoz, or hiccup, by thinking of the place where the shoe was put. 53 In the Roman tombs opened at Mavence, in women's coffins, bracelets, rings, needles and censors for burning incense were found.54

The Danish women, before putting a child in a cradle, to prevent evil spirits from hurting the child, fasten garlic, salt and steel to the cradle,55 In Sweden a knife, or other steel implement, is laid in the cradle of an unbaptized child to keep off spirits. Bathers throw steel into the water, and sav :- "Neck, Neck, steel in strand, thy father was a steel-thief, thy mother a needle-thief, so far shalt thou be hence as this cry is heard."56 The young German warriors (A. D. 100) were an iron chain, 57 and the British mothers gave their children their first food off the father's sword. 58 The Germans used to lay three knives for the Three Mothers, 50 probably at first to drive them away, though they afterwards seem to have laid offerings on the blades.

In 1691, in the Scotch Highlands, cold iron was put in a lying-in woman's bed to keep off the fairies, the reason being that, as iron mines lay near to hell, iron had an unpleasant savour to those fascinating creatures.60 In Suffolk (1780) it was believed that an old horse-shoe buried under the threshold of a witch kept her in at night.61 That no elf or nightmare should ride on a woman in child-bed, and that an infant may not be carried away by an owl, a knife should be kept on the couch.62 In early England the fiend-sick patient had to drink out of a church bell.63 Middle-Age Europe believed that spirits could be hurt by swords and lances.64 The belief that a horse-shoe keeps off spirits, is

In some Roman British tombs large nails have been found

⁶⁵ Tylor's Primitive Culture, Vol. II. p. 140.

common in England and Scotland.65 A horse-shoe keeps off spirits and witches, according to the couplet: - " Straw laid across her path, the witch retards. The horse-shoe nailed, each household guards."68 In England (about 1612) it was considered lucky for a man to find a piece of iron. 67 In North-West Scotland, gold and silver cured the effects of the evil eve. 68 In England it is bad luck to make a present of a knife, and in North England, unless a nominal price is given. no one should take a present of a knife, for a "knife severs love."69 Pins are used in England in many cures. To cure warts prick them with a pin and drive the pin into an ash tree. 70 In England, a child afflicted with an eruption is cured by being rubbed with a half sovereign.71 and in Dumfrieshire the Locherby penny cures cow-madness.72 In Northumberland pins are thrown into the wishing well at Wooler.73 On New Year's Eve you should have money in your pocket,74 and it is unlucky to have no money in your pocket when you first hear the cuckoo.75

The belief that spirits fear iron and a ring is perhaps the origin of the sacredness of the key. In England a key was used in divination. A key is heated and laid on the back to cure lumbago, and is put down the back of the neck to stop bleeding at the nose. With the house-key and a frying pan fiends are scared and bees tempted to alight.77 After a death the hive is tapped thrice with a door key.78 In some parts of Scotland, when a bride and bridegroom enter their home, each carries a key — the husband a door key and the woman a bunch of keys.79

In Wiltshire (1874) a labourer's wife asked a clergyman for a sacrament shilling to tie round her child's neck to cure fits. 80 A "heart-grown," - that is, a fairy-witched, child in England is laid naked on the blacksmith's anvil. The blacksmith lifts his hammer as if to strike hot iron. but brings it down gently. Three taps of the hammer cure the child.81

Urine. — The next most important power over spirits is urine. Urine is a widely used medicine.83 From the ammonia it contains, urine is useful in two ways: in recovering from swooning, fainting, nervous and other seizures, and in staunching bleeding. Both of these properties shew power over spirits. In restoring consciousness the power over the oppressing evil spirit is evident, and in staunching blood urine drives away a spirit, in accordance with the early belief that wounds bleed because they are sucked by spirits.83 The use of cow's urine, as a purifier, is common among all higher class Hindus. It is the regular means of getting rid of the ceremonial impurity which a birth or a death in a family causes, 84 and it ought to be taken on certain festivals and highdays. The importance of cow's and bull's urine. as a purifier among the Hindus and still more among the Persians, seems to shew that cow

⁵ In London, in 1896, most West-End houses had a horse-shoe nailed in the threshold, because it laid evil spirits. The practice was universal in Wales in 1812 (Leslie's Early Racce of Scotland, p. 423). Horse-shoes were formerly (1600) cut in the doors of British Christians, and they were fixed in boats and ships to guard them against storms (op. cit. p. 424). Nelson had a horse-shoe nailed to the Victory's mast (Dyer's Folk-Lore, p. 113). The ends of the horse-shoe ought to be turned up. Compare Reginald Scott on the cure by sympathy, - that is, treating the weapon, not the wound. If they stroke the sword up, the party feels no pain: if they draw the fingers down, the pain is intolerable. See Note 2, Reginald, in Scott's Lay.

sa In the Kônkan, near Bombay, no medicine is so largely used in child-diseases as is the urine of the cow (Information from Mr. P. B. Joshi). According to Pandit Narsinha (Nightature), pp. 174, 175) zine kinds of urine are considered medicinal by Hindu physicians — the urine of a man, a cow, a she-buffaloe, a horse, an ass, a she-goat, an ewe, an elephant and a camel. Human urine destroys worms and removes phlegm, wind, insanity and poison (Information from Mr. Nårsyan V. Purandhars). That urine stops bleeding, explains the Marathi test of a disobliging man: "To kaptya kardagli var mutair nahi"; He will not even make water on a cut finger. For the many healing properties of mrine in Roman Folk Medicine compare Pliny's Natural History, Book xxviii. Chap. 6.

es Tylor's Primitice Culture, Vol. II. p. 126.

²⁴ The idea of the ceremonial impurity which attaches to birth, monthly sickness, and death, seems to have its root in the fact that those are the three times in life when the chances of spirit-possession are greatest. The point is noticed under "spirit times."

Spin or talk designation in the first transfer and the first transfe

and bull worship are greatly due to the healing value of their urine. Human urine is also believed to have a great nower over spirits.

Among Ratnigiri Marathas human urine is used to cure cough and snake-bite. 45 Among lower class Mahammadans, Hindus and Portuguese in Gujarat and Bembay, people. when they have had a bad fall, or when they are severely beaten, drink their own urine. They say that it has the same intoxicating and reviving power as brandy.80 In Sind and other parts of India, to bathe it with urine is a common cure for a bleeding wound. In the East Dekhan, the exercist keeps urine in a bottle and threatens to make the spirit drink it, if he does not tell who he is. The filthy food which spirits cut shows that it is not its nastiness which makes the spirit fear urine. A Hindu in a haunted place will make water in a circle and sit secure in the middle: or, if he must move on, he will make water on his left foot, and the spirits will fly.87

Among the Persians and the Parsis the use of urine is still commoner, because their fear of spirits is greater. After the thread-prayer the Parsi every morning should drink and wash his hands in cow's urine. It is a sin to wash the hands in water till they have been washed in urine.89 That the urine of an ox or of a bull is equally cleansing as the urine of a cow, 39 supports the view that the cow was worshipped, rather because of the value of its urine, than because of the value of its milk. So also the fifth nust acceptable place in the (Parsi) universe is where cattle and beasts of burden leave their urine.90 Among Parsis defiled garments are washed in cow's urine.91 Corpse-bearers should wash their bodies and hair with urine. 92 Any one who touches a dead body should wash his hands in cow's arine, and the spirit of corruption will be driven out.93 In some cases it is enough to sprinkle the clothes with urine, but a woman who gives birth to a dead child must drink cow's urine and ashes, and wash her body with urine. 24 Besides, in their religious services, urine is commonly used and highly valued as a medicine by Parsis,

Urine was greatly valued as a medicine by the Romans. Pliny⁸⁵ notices asp's urine as a cure for the drowsiness which follows an asp sting. He mentions the urine of camels, apes. wild boars, asses, and horses as curing many diseases.36 The examples are valuable as shewing one of the grounds on which these animals were vorshipped. A boy's urine cured fever. 97 a man's urine cured gout. 98 and whoever dropped his urine on his foot in the early morning, was safe from any charm.99 The use of urine is seldom recorded in books of travels or of customs. This is probably from an idea that the habit has no special meaning or interest, rather than that it has not been noticed.100 Even where no reference has been made to the use of urine, cases are recorded of the tails of cattle being used to sprinkle holy water.1 This suggests that the yak or Tibet ox tails, which were so commonly borne close to Hindu kings and which appear in old Buddhist and other sculptures and paintings, were valued as spiritscarers rather than as fly-whisks.

This seems to explain why the fuscions was hung round children's necks and under warrior's triumphal cars (ep. cit. Book xxviii. Chap. 4). The Hindus have the same

belief that spirits fear the private parts of a man. 100 Tylor's (Primitive Culture, Vol. II. p. 433) reference to the Hottentots smearing mother and child with urine in their unclean way seems a case in point. It is doubtful whether he intentionally left out other references. as he mentions the Parst practice in detail (op. cit. Vol. II. p. 488).

¹ Tylor's Primitive Culture, Vol. II. p. 538.

Bombay Hindus use cow's urine as a medicine as well as a purifier. In the Kônkan. cow's arine is considered a specific for worms, from which young children are apt to suffer. The Brahmans and Prabhus of Bombay, on the eleventh day after a death, become purified by drinking cow's urine. The Brahmans in Bombay, after a child is born, keep cow's urine, with num leaves floating in it, at the entrance of the lying-in room, and no one is allowed to enter the room without first sprinkling the urine on his feet with the nom leaves. Among the Prabhus of Bombay, on the tenth day after child-birth, cow's arine is sprinkled all over the house; and, to free them from all impurity, each member of the household thrice drinks about a teaspoonful of the panchagarya, - that is, clarified butter, curds, milk, honey and cow's urine.2 In Poona, drops of urine and Ganges water are poured into the dying Raul's mouth.3 The Dhors of Ahmadnagar spill a pot of cow's urine on the grave,4 and the Namdev Shimpis of Ahma hagar, on return from a funeral, dip a nim5 twig in cow's urine and sprinkle their heads with it. Among the Dharwar Lingavats the holiest of the holy water which is drunk by laymen is that in which the stone ling of the high priest has been bathed.7 The Gôsâvîs of Releaum, after a death, are purified by drinking the five products of the cow.8 On one fast nothing but cow's urine is drunk by Hindus.9 Fryer10 (1673) notices how the Banias of Surat "take delight in the stale urine of a cow, besprinkling themselves with it, as a Christian with holy water, or a Musalman with rose water: nay, more, they even use it as a potion or filter and after it bid the devil do his worst." The Nairs of Malabar consider urine to be a purifier. and have water, cow's milk and cow's urine poured over them on the fifth, tenth and fifteenth days after a death.11 Oderic (1320) says: - "In Malabar the people take two basins, one of gold. the other of silver, and when the ox is brought from the stalls they put these under him and catch urine in one and dung in the other. With the urine they wash their face and with the dung they daub themselves on the middle of the forehead, on the balls of the cheeks, and on the middle of the chest."12 According to the Dabistanta human urine was drunk by some voois.

The Burman priests use as medicine the urine of a cow or a black bullock, on which the juice of the lemon or other sour fruit has been poured. In China cow and horse urine are considered an excellent lotion for skin disease, and also for destroying white ants. In the Philippine Islands the first excrements of a new-born babe are a cure for snake and dog bites. 16

The Dinkas of the White Nile make their hair a foxy red by continual washing with cow's urine. The Shillooks of the White Nile, if fairly off, cover their body with a rusty coating of cowdung ashes: with them dry ashes and cow's urine are indispensable articles of toilet. According to a widespread African practice, milk vessels are washed with cow's urine instead of with salt. The Dinkas of the White Nile burn cow-dung and smear themselves with the ashes; they also use cow's urine in washing dishes. Hottentot sorcerers or rain bringers procure rain by scattering their urine over a fire. At a Moor wedding in West Africa a present of urine from the bride's person is sent as a special compliment, and is dashed in the receiver's face. Child's urine painted on the affected spot is considered a cure for sores in Central Africa.

The Indians of Peru, in South America, wash their hair in urine, and the Spanish American women do the same.²³

Property of All Continues of the Continu

The Highlanders in the seventeenth century used to sprinkle their cattle with urine on the first Monday in every quarter. In Scotland, in Perthshire, urine is used as a cure for wasp-stings. In the South of Ireland, especially in the outlying parts, among the lower orders, the drinking of human urine is a not uncommon cure for diseases. In England, in the seventeenth century, urine was considered to be a book of fate. In the Highlands of Scotland water and oil of human dung were believed to be very effective against madness, and the urine of the bear mixed in vinegar was said to cure epilepsy.

The less important articles which are believed to have power over spirits, because they have been found to cure diseases, may be shortly noted in alphabetic order:—

Ashes, called by Hindus rukská or protection and vibhúti or prosperity, are much used by them as purifiers, that is, as spirit-drivers. Though ashes are sometimes taken internally as a medicine, the reason why they are considered specially potent against spirits seems to be their power of staunching blood and of healing sores. The following illustrate the common Hindu use of ashes to keep off spirits. The Lingayat rubs his brow with cow-dung ashes, and ascetics cover their whole bodies with ashes. The Vaidus of Poona get purified by rubbing their bodies with ashes, 20 and a Dekhan medium surrounds a possessed man with a circle of ashes. In Dharwar, as a cure for head-ache, ashes are thrown on the head or applied to any other part of the body that pains,31 In Belgaum, among the Bhâts, a person excommunicated from the caste is re-admitted on swallowing ashes given him by the caste teacher.22 In Bijapur, ashes from the censer of Maruti, or other guardian deity, is one of the chief means of scaring spirits. When an Ambig, or fisherman of Bijapur, is possessed, he is set before a god, and his brow is rubbed with ashes.33 The Kôugaris of Kanara get from the washerman, on the third day after a death, wood-askes and water, and the Dhors get cow-dung askes once a year from the head of the Liughyat monastery of Chitradruga in Mysore.34 Among the Halvakki Vakkals of Kanara, on the third day after a birth, the people and their house are purified by the washerman sprinkling on them, and in the house, water mixed with ashes and potash.35 High-class Hindu females in Western India, during the Dîvâlî holidays, draw lines of ráagôli (husk-ashes) in front of their houses. Among the Hindus, blusma snana, or ash bathing, is considered as good and purifying as bathing in water.36 The Hindu religious book, Brahmôttarkhand, states that a great ascetic applied ashes to the body of a king named Bhadrayu, and from that time the king because famous for strength, glory, courage, and power of memory.37 The Beni-Isra'ils of Bombay, at a birth, to keep off evil spirits, draw lines of ashes outside of the mother's room. A Parsi woman after child-birth drinks ashes mixed with cow's urine.30 The Parsis strew their fields with the ashes of the sacred fire.30

The Jews in grief covered themselves with ashes and sackcloth.46 In Central Asia ashes are used to stanuch bleeding in cases of circumcision.41

The Papuans, when they see a stranger, throw ashes, lime, and sand over their own bodies.⁴² In consequence of their belief that spirits enter by the hair, the people of the Arra Islands, west of Guinea, wash their hair with ashes and lime.⁴³

According to Pliny, horse-dung ashes, used with egg-shells, are good for staunching blood.⁴⁴ The Romans believed that the ashes of a calf parified.⁴⁵ They considered ashes sovran

for staunghing blood. The ashes of a sacred pregnant cow were preserved in the temple of Vesta at Rome, with bean stalks, as a means of expiation.46

In a Russian story, cow-ashes mixed with excrement, bring good luck.47 In Russia wine and water are used in extreme unction, and incense ashes are laid with the dead.48 In Poland, when "the white folk" torment a sick man, a bed of pease-balm is made, a sheet spread over it, and the patient is laid thereon. A person walks round him carrying on his back a sieve full of ashes, and letting the ashes run out till the floor all round the bed is covered with them. The first thing next morning is to count all the lines in the ashes, and some one goes silently, greeting no one on the way, and reports the number to the wise woman, who prescribes accordingly. Spirits are believed to leave their tracks in the ashes, which are thus strewn.48 In France, in some religious houses, the dying breathed his last lying on ashes. 56 In Roman Catholic Europe, people are marked with a cross of ashes. 51 With ashes of palm-leaves the Roman Catholic priest signs the foreheads of his people in the form of a cross.52 Ash-Wednesday, which is the first day of Lent, is called so from the ancient ceremony of blessing ashes on that day.53 Ashes of box-tree leaf were used in the same way as palm ashes, and on Palm Sunday were given by the priests as an exorcism against ague and worms. 54 In England, it was believed that any person who is to die within the year will have his footprints marked in ashes on St. Mark's Eve, April 25th.55 In England, people used to examine ashes to see the foot-prints of a future hasband or wife,56 and ring-worm was cured by dropping ashes on the affected place.57

Beating. — Spirits fear beating. So St. Francis flogged himself to keep off the devil, 58 and Merlin ordered a weekly whipping to disenchant Dulcinea. 59 At Târâpur, in the Kônkan, in 1673, M. Dellon saw, in the cloister of the Church of Misericordia, penitents with covered faces and bare shoulders wounding themselves with whips containing bits of iron. 60 The practice of self-flogging for the removal of sins seems to have been introduced into the Kônkan by the Jesuits. In 1551 a Jesuit named Gaspar established a society of penitents, who, when the preacher aroused a feeling of sorrow and shame, lashed themselves with thongs, and cut themselves with iron blades till the blood flowed. 61

Among the Dekhan Mhârs, when a man is possessed by a spirit, and the spirit does not tell his name, the possessed man is slapped with a shoe, his fingers are pinched, and he is caned. In Shôlāpur, among the Lingāyats, the woman who names the child has her back beaten with gentle blows, and, among the Māngs of Shôlāpur, at their wedding, the bride and bridegroom beat each other on the back with a twisted waistcloth. Among the Dhârwâr Mâdhava Brâhmans, when the father's sister names the child, the women of the house give her some blows on the back. In Dhârwâr some Brâhmans, who live by begging, refuse to take alms, and threaten to curse the giver, unless he beats them. Gemelli Careri (1695) mentions that when the lower classes in Goa marry, the couple lie on a hard bed, and the kindred come and thrash them, shewing them so much of this brutal kindness that they are for a long time unfit for work. At the yearly festival of the goddess Dayamava in the Southern Marâthâ Country, one of the performers, the priest of the Pôtrâj, has a long whip, which he cracks, and to which divine honours are paid. In Dhârwâr the pious worshippers of the goddess Dayamava wave a lighted lamp round the goddess and beat their cheeks in token of atonement for sins.

```

The Kirghiz of Central Asia heat a woman in child-bed, because they believe her to be possessed. Beating with a leather lash is a common Japanese application as a remedy for rheumatism, and to promote circulation. The Arawahs, when a man dies, cut thorny twigs and beat the body to try and bring him back. Careri notices a disease in the Philippine Islands, which can be cured only by beating the patient black and blue. The South Africans have a ceremony, called sechu, in which the men beat the boys with wands, drawing blood, to harden them. When the king of Tahiti, on his crowning day, is bathing, the priest strikes him on the back with a sacred branch: this purifies the king from blood and other guiltiness.

In the mysteries of Adonis, in the funeral ceremony mourners pass along the streets, scourging themselves and uttering frantic crics. In chivalry the knight struck the candidate on the neck with a sword, kissed his cheeks and forehead, and with his open palm gave him a gentle slap. Among the Romans, during the Lupercalia, matrons were lashed by the priests with leather though, and they became pregnant.

When St. Teresa of Spain (1540) began to suffer from trances and fits she was said to be possessed by a devil, and Francesco Borgia, Jesuit Provincial General for Spain, advised her to scourge herself with a whip of nettles 73 In Germany, if your milk is bewitched, whip it in a pot, or stir it with a sickle: every lash or cut makes the witch wince. 30 The Duke of Carinthia, in Austria, gets a slight slap on the face from a peasant when he succeeds. 31 In the thirteenth century the Italian sect, called the Flagellants, held that scourging was equally important as Baptism and the Sacrament. Among Roman Catholics the communicant is patted on the cheeks, 32 and the Roman Catholic priest in the Sacrifice of the Mass on several occasions strikes his breast. 33 Beating with nettles was, in England, considered good for consumption. 34

Similarly with men, flower and fruit trees and animals were whipped, if believed to be worried by spirits. The Hindus have a belief that the *kadamb* tree when beaten by a pregnant woman with her left foot bears plenty of flowers. According to the Spanish proverb "a woman, a spaniel, and a walnut tree, the more you beat them the better they be." In Hull and York dogs are whipped once a year. F

BULLETIN OF THE RELIGIONS OF INDIA.

BY A. BARTH OF THE INSTITUT DE FRANCE.

(Translated from the French by Dr. James Morison.)

(Concluded from p. 41.)

I SHALL finish this review of works on the ancient philosophy of India, by mentioning a short Jains work, the Shaddarsanssamuchchays, "the Epitome of the Six Systems," of Haribhadra, of which we have a good edition from Prof. P. L. Pullé, of Padua. Haribhadra, who according to tradition, died in 529 A. D., but by more exact testimony lived in the ninth century, and who had several homonyms, was a Brähman converted to Jainism He is famous still as the author of 1,400 prabandhus (chapters of works), and seems to have been one of the

first to introduce the Sanskrit language into the scholastic literature of the Svetambara Jains.40 By the "Six Systems" the Brahmans understand those we have just passed under review, the two Mîmâmsûs, the Sankhya and the Yoga, the Nyâya and the Vaiseshika. Haribhadra, on the other hand, if indeed the treatise be by him, 41 expounds under this title very curtly (in 87 slokus), but quite impartially, the essential principles of the Buddhists, the Jainas, the followers of the Nyaya, the Sankhya, the Vaiseshika, and the Mîmâmsa. He thus selected his own school and those with whom the Jainas have had the closest affinities, and puts them in between the schools of their greatest enemies, the Buddhists and the ritualists of the school of Jaimini. These last he couples with the Lokâyatikas, the atheistic materialists, not simply from sectarian fanaticism and on his own judgment, but following an opinion that was then prevalent even among the Brahmans.

The bridge between speculation on the one hand, and ritual and custom on the other, is not so long in India as it is with us. Both disciplines make the claim to be founded on the Veda, with nearly the same justice in either case. On the Srauta Sútras, the texts which deal with the great solemn sacrifices. notices have been given above, under the Vedas to which they are connected. I have only now to mention, under this head, two works which have as their aim the comparative study of single points of this ritual according to the texts as a whole. Professor Hillebrandt, who takes up a clue, which he has followed before, has looked out for the traces, which the ancient festivals at the solstices have left in certain great ceremonies of Brahmanism, the Sattras.43 These festivals must have been common to the Indo-European peoples, and this primitive community of origin may yet be discovered in several characteristic points where Germanic and Slavonic usages appear to coincide with Brahmanic prescriptions, As a general proposition Prof. Hillebrandt's argument is quite worthy of acceptance. It may very well be that the Brahmans have embodied ancient popular solemnities of this kind with their cyclic ceremonies, whatever doubt we may have as to the more theoretic than real existence of these long ceremonies. But, in detail, we think he has gone too far, and that we will do well to bear in mind the strictures passed in the Revue de l'histoire des Religious43 by M. Sabbathier on some points of his theory. Apart from this theory, Prof. Hillebrand t's essay abounds in details of every kind on the constitution of the ancient ritual of the Brahman. Fuller still, and completer, but giving less room for hypothesis, is the monograph of Prof. Weber on the Vajapeya, a ceremony which included games, chariot races, and the drinking of surá, a highly intoxicating beverage, which even the highly developed ritual ordinances were obliged to retain on this occasion, in spite of its prejudice in favour of temperance.44 Here, again, we have to do with a popular custom admitted into and modified by the sacerdotal Sástra, and Prof. Weber has admirably shewn, how, from being a festival originally accompanying the election of a chief, it has finally become simply one of the forms of the some sacrifice.

Under the rubric of domestic ritual and customary law, I must mention, first of all, the new edition of the Dharmasttra of Apastamba45 by Prof. Bühler, and that of the Grikya Sutra of Hiranyakeni,45 by his pupil Prof. Kirste. These two works area part of the cutras of two very

nearly allied schools connected with the Black Yajus of the Taittiriyas. Large parts of their satras are common. By noting the variants, for example, Prof. Bühler has been able to make his edition of the dharmasitra of the one school at the same time serve as an edition of that of the other school. In his preface the reader will find new information as to important readings in the text of Apastamba and the commentaries. To these texts may be added the Karmapradipa, the first chapter of which Dr. Schrader has published and translated. This is a Grihya ritual in general, but following more particularly the satra of Gobbila (Samaveda), though it has also been assigned to the Rik and more especially to the White Yajus. It has even been attributed to Kâtyâyana, the author of the Srautasutrus of that Veda. Dr. Knauer had before supplied some useful information on this treatise, and it seems to be older than the supplement to the satras of Gobbila mentioned above.

Professor Oldenberg has published a second volume of his translation into English of the Grihvasútras, containing Gobhila, Hiranyakeśin, and Âpastamba.43 The collection now embraces all the texts that have been published, and the translator has been in a position to add his general introduction. Up to the end of his task the translator has managed to combine exactness. completeness, and, what is more, originality in a theme that has been so often treated before. In the introduction, for instance, the reader will hardly find a single instance of mere renetition of old facts, and yet no essential point has been omitted, and though in his results the author arrives at the same conclusions as his predecessors he has done so by his own methods. For example, by examining the metre, he has been enabled to fix precisely in a novel and ingenious manner the place of these sutrus in Vedic literature. The practices which they prescribe are, in great part, clearly of very great antiquity, since we meet with them in many instances and with striking resemblances in their details among other Indo-European peoples. Several of them are mentioned even in the Brahmanas. But, before these sutras, there were no hand-books for this part of the ritual, as there were for the more complicated ritual of the great sacrifices. Till then these usages had been handed down by tradition, not by formal instruction. In other terms, the Griyasitras are smartas not scautas, and deal with custom and not with doctrine. A very complete synoptical table of the subjects treated of in these texts is added to the volume, which ends with the translation of the Yajñaparibhashasitras of Apastamba made by Prof. M. Müller and mentioned before. Drs. Caland and Winternitz deal with special points of this ritual, the former with the worship of the dead,49 and the other with the marriage ceremonies,50 and they have studied them from the comparative point of view, by bringing them into connexion with analogous customs which have been observed among other peoples. Professor Kirste has also made a comparative study of one of these points, by putting the ceremony of shaving the head of children among the Hindus alongside of a very similar practice still observed by the South Slavonic nationalities.⁵¹ The resemblance may be close, but I doubt if the explanation of the usage proposed by Prof. Kirste is convincing.

⁵¹ J. Kirste. Indopermanische Gebrüuche beim Haarschneiden in the Analecta Graecensiu, Festschrift zum 42. Philologentage in Wien 1898.

He connects it with the ancient worship of trees and plants, which according to him are represented in this case by the hair, and refers us to the prophetic ship Argo and the oaks of Dodona. The late Mr. Wilken,52 who gave very ingenious explanations of most of these ancient usages, and who also wrote a dissertation on the practice of offering no the hair, more correctly looked on it as possibly a symbolic sacrifice, a kind of ransom for the individual whose hair was cut off. On another practice of the domestic ritual, "the servent-offering," Dr. Winternitz does not go beyond India, but compares the past with the present and shews how the same customs or others very similar have been preserved down to our own days. 13 Lastly, a native medical man in the British service, Mr. Gupta, has made a study of ancient Hindu law, from the social and sanitary point of view.54 A very different branch of learning, which we should certainly not have to mention in this connexion in the case of any other country, the ars amatoria, is in India one of the recognized parts of the Smriti. Like the rest it again goes back to a sitra very closely allied both in form and matter with the dharma and oritina sutras, with which it has several chapters in common, sometimes nearly identical in terms, viz., those which deal with the conditions and forms of marriage. So far, it is a sastra quite as much as the others, proclaiming, as they do, the dharma. Otherwise the book is inconceivably filthy, but replete with curious details for the history of manners and customs. It has been edited with the commentary of Yasodhara, by the late Pandit Durgaprasada. for private circulation only, although apart from this purely formal announcement, it does not contain a word of English.55 It has been also translated into French (a previous English translation is anonymous) from some source, probably a modern version got in India, but certainly not from the Sanskrittext, which it does not follow, even in its arrangement. 56 It can be of no value as an archæological document, and as the author has seen fit to add all sorts of dirt gathered from Western literature, it must be classed simply among books of pornography.

From these ancient sûtras and other similar writings the entire legal literature has taken its rise.—in the first place the dharmasastras properly so called, then the commentaries on these, and the more systematic treaties which explain some particular department or which extend over the whole field of law, and compare the authorities, and discuss the pros and cons in single cases, and settle the differences of opinion according to the rules of the dialectic of the Mîmâmsâ. Our thanks are due to M. Strelly for giving us a new translation in French of the Code of Manu, 57 that of Loiseleur-Deslongchamps, the only good one, which dates from 1833, being long out of print and unprocurable. The bibliography, which M. Strehly has given, is insufficient it should either have been left out altogether or treated more fully, and there are a few slight oversights in the preface which might be removed, but the translation itself, in which the anthor has used the help of the best authorities, is executed with eare, and is trustworthy. The notes, which are drawn up with much judgment, give all information necessary for a reader who may be unfamiliar with things Indian. The collection of extracts from the principal commentaries on Manu, which Prof. Jolly had begun in the Bibliotheca Indica, had to be stopped after the third part, 58 these texts having meanwhile been published in extense, but not

with all the correctness desirable, in the large edition of Manu by the late Visyanatha Narayana Mandlik. The extracts extend to the end of Book III. We have also from the same scholar a translation of the codes of Narada and of Brihaspati. The translation of Narada is made from the fuller text edited by Prof. Jolly in the Bibliotheca Indica, and for this reason, and because of the numerous improvements in detail, it is much superior to his earlier version of 1876. The translation includes also the fragments quoted from Narada, but not found in the printed texts: these Prof. Jolly has collected carefully from the whole of the legal literature. The code of Brihaspati, which seemed to have perished, has been completely restored by the help of considetable fragments which have survived in quotation. Professor Jolly has also done the same for another lost law-book, that of Harita, the section of which devoted to civil procedure he has endeavoured to reconstruct. 60 To the same class of works belongs the Smriti of Parasara, which is in course of publication in the Bibliotheca Indica, along with the commentary of Mådhavåchårva. 61 Through this commentary, this Smriti has points of contact with the following compilations, which form a part of the same collection, the Chaturvargachintamani of Hemâdries and the Madanapárijáta of Vîśveśvara (XIV. Cent.), 53 with the difference, which is more apparent than real, that these latter do not adhere to any one particular text. Lastly, useful investigations on various points of the theory and history of Indian law will be found in a series of articles published by Prof. Jolly, in the Zeitschrift of the German Oriental Society: on the "price of blood," on polyandry, and on the mode of procedure before Hindu tribunals,64 on the law manuscripts of the India Office, with reference to Prof. Eggeling's Catalogue, 65 on infant marriages and the controversy which that grave question gives rise to in India.66

The whole of this literature, both legal and customary, might have been lost, but we should still have been able to recover the substance of it, - in confusion it is true and with peculiar additions, - in the enormous compilation which finally gave shelter to all the reminiscences of the old epic legends of India. I have before mentioned the investigations of Prof. Weber with regard to the difficult question of the relation of the Veda to these legends. As to the long poem in which these traditions are summed up, the Mahabharata, it is well-known that it is being translated into English, thanks to the perseverance of Pratapa Chandra Ray.67 The translation, which is now at its 78th part, contains four-fifths of the whole and has reached verse 12553 of the XIIth book, in the Calcutta edition. I shall not dwell again on the great sacrifices which the generous Hindu continues to make in order to bring his huge patriotic enterprise to completion. I shall only add that, thanks to the experience he has gained, the work of translation has continued to increase in exactness, and that no effort has been spared to remove from it the shortcomings observable at the commencement, and I shall express once again the hope that France will not be the last to respond to the appeals of the author, and take part in his unselfish undertaking.68 I know only portions of a series of studies published in the Muston, to by Abbé Roussel on the theology

of the Mahubharata.70 They are judicious and shew attentive reading. But, as was to be expected, what is presented is only the general system of Hindu thought, and as the author enters into details and analyses large portions of the poem, it is hard to see where he means to stop. It would have been a more useful, if a much more delicate, task to look in the poem for traces of some doctrine, if not special to the work, at least more characteristic of it, by disregarding what is common to it and other works. Professor Holtzmann has again dealt with the views expressed before by him on the origin and varied history of the Mahabharata, and has extended and defined them more exactly.71 He has turned his essay into a volume, and his views have not gained in weight thereby. The book abounds in facts and observations which are sound and interesting, for the author has a wide acquaintance with literature and knows the Mahabharata thoroughly. But his theory, which is in itself erroneous,72 has become quite inadmissible in its new and more definite shape. It is well-known that in Prof. Holtzmann's eyes, the original poem was composed in the third century before our era at the court of Asoka; that its spirit was warlike and chivalrous, and Buddhistic to boot: that its heroes were the chiefs of the conquered side. Karna. Durvodhana, and his brothers: that the Brahmans, when they took possession of it, turned it, without complete success, into a glorification of the victorious side, the Pandavas, and a condemnation of Buddhism, cunningly discuised by them in the garb of a religious belief which was closely related to Buddhism, and which was held in equal detestation by them, vis., Saivism; that later on, in a series of fresh alterations, they tried to remove all traces of that hostility to Saivism, with which in the meanwhile they had become reconciled; lastly that by successive additions, they had turned the poem into an encyclopedia of their eclectic doctrines. All of this theory is little in harmony with the ascertained features of the religious, literary and linguistic history of India. By trying to fix precisely the periods of these various remodellines which, according to him, did not reach completion till the thirteenth or fourteenth century. Prof. Holtzmann has ended by ruining his own theory. It has been pointed out, first by Prof. Jacobi73 and then by Profs. Bühler and Kirste,74 that at the middle of the fifth century the poem contained 100,000 verses; that even at this period and certainly in the seventh century, it was considered as a work of authoritative teaching, a smriti, and that it had the character and validity of a dharmasástra, which, according to the theory of Prof. Holtzmann. it had acquired only from the tenth to the twelfth century onwards; that, starting from the seventh century, we have a whole series of evidence which does not allow us to assume the extensive alterations demanded by this theory; that, lastly, in the first half of the eleventh century Alberûni and Kshemendra knew the poem in nearly the form in which we have it. For the rest, there are in Prof. Holtzmann's book many observations on special points, which make the absence of an index a matter of regret. As to his theory of the formation of the Mahábhárata, it is overthrown utterly.

What Prof. Holtzmann has done for the Mahábhárata, Prof. Jacobi has done, but with a quite contrary aim, for the other great Indian epic, the Ramayana; the former has tried to make out the Mahábhárata to be later than it really is, the latter has tried to shew that the Râmáyana is older than was supposed.⁷⁵ He rejects the first and last books, curtailments on

Sylvain Lévi, in the Revue Critique, 19th April 1893. Prof. Bühler's essay forms, as it were, a second part of a previous work of the same scholar, in which he proves, by the testimony of the inscriptions, that the so-called classical poetry with all its reassments, is very much older in India than recent theories are inclined to admit, Die indischen Inschriften und das Alier der indiachen Emstpossis, in the Stimmgeberichte of the Academy of Vienna, 1890.

¹⁸ Hermann Jacobi, Das Kamayana, Geschichte und Inhalt, nebet Concordans der gedruckten Recensionen. Bonn, 1896. Cf. an article by M. V. Henry in the Revue Critique, 1st May 1896.

which most critics have long been at one. In the body of the work he makes other excisions for which he gives his justifications, and in many cases with absolute conviction to the mind of the reader. By this means he obtains a poem of moderate dimensions, in which Rama is not yet identified with the supreme being, in which neither Yavanas nor Sakas make their appearance. in which the Zodiac is not mentioned, where, on the contrary, everything squares, with what we can learn of pre-huddhistic India, and of the religious, political and social condition of the Gangetic peoples, the Kosalas and Videhas, of the fifth and seventh centuries before our era. the period at which the original poem must have been composed at the court of the descendants of Ikshvaku at Ayodhva. The whole discussion is carried out, both in its main outlines and in its details, in an orderly manner, without confusion or undue haste, and in a clear, precise and well written style: the chief thesis is accompanied by a mass of subordinate investigations which are attractive and correct, and are never merely digressions. I should like to be able to reproduce all of these here.77 But I am not convinced of the truth of his main position. In the previous Report." I indicated briefly that I could not agree with the conclusions of Prof. Jacobi in the form in which they were first laid before us, for, like Prof. Holtzmann's book, this work is the expansion of an earlier essay. I must, therefore, state, so far as the space at my command will permit me, why I cannot accept them in their new form.

On p. 62 Prof. Jacobi asks who the "investigator" is who has suggested the unfortunate hypothesis that the Sanskrit epic might be a reproduction of a Prakrit original, and calls on him to furnish the proof. I am afraid I am the guilty person. As to " proof," strictly speaking I confess I have none, for I always try at least to be careful in the application of that expression. But there are some probabilities in its favour which seem to me to admit of discussion. I believe that the Hindu epic is ancient, as ancient in its origin as the earliest traditions of the nation; that for a long time it was national and popular in the real sense of the word; that to be so it must have been understood by the people and recited in their own language; that lastly it was put into Saiskrit only at the period where we see the traces of a secular Saiskrit literature make their appearance, about the beginning of our era, a hundred years one way or the other being of no importance. By going back seven centuries Prof. Jacobi escapes the objection that Sanskrit was not employed then, just as he escapes all the direct arguments which have destroyed Prof. Holtzmann's theory. But, after the poem was once composed, how are we to think it was handed about? Wandering singers, "rhapsodes" we may call them, the kuś lavas, must have carried it from tribe to tribe, from one small town to another, at assemblies of the people and festivities of the rajas. But to whom could they have recited a poem like this in Sanskrit, when for centuries Prakrit only was spoken, when Prakrit was the language of the courts and of government, when the inscriptions shew us the officials trying to imitate as well as they could the forms of the sacred language, which no doubt existed and was regarded with great veneration, but was confined in use to special purposes, and was likely cultivated only in the schools of the Brahmans? Professor Jacobi himself admits that the poem was for a long while handed down orally, and would those who thus transmitted it, who added to it and altered it ceaselessly in order to keep it to a certain degree in touch with the ideas of the day, have neglected to follow the current of things in one point only and that the essential one of language, at the risk of failing to be understood? We do not see what could have led to this invasion of the profane literature by the Sanskrit. Reasons of a religious nature, perhaps, too, of a political nature, may have had their share in this. But the fact remains, though not proved in all details, yet to my mind exceedingly probable. The inscriptions on the monuments shew it to us in its gradual advance, as the investigations of M. Senart and Prof. Bühler have established so clearly; and the late M. Gustave Garrez

⁷⁶ Even the mention of two eclipses which Prof. Jacobi has calculated, but he does lay much stress on them.

⁷⁷ I shall mention only as a specimen of these, what he says on p. 69 on Sairism and Vaishpavism, and the alterations with a sectarian tendency of which the Brahmans have been so often falsely accused, as well as his refutation, on p. 84, of the theory of a primitive Buddhistic Bandpapa.

⁷⁸ Tome XIX. p. 165. Tome XIX. p. 165.

proved long ago in the case of the lyric poetry. The literature of the fables and the Prakrit of the dramas teach us the same lesson, that all the popular literature of India, with the exception of course of the sacred and scholastic literature of the Brahmans, began with the Prakrit and ended with the Sanskrit. In the first centuries of our era, the Buddhists themselves had to follow the general current and use Sanskrit for everything, even for their canonical books. The epic poetry alone would, on this supposition, have continued in vogue without sharing in the movement. I cannot believe this, and the whole argumentation of Prof. Jacobi, however well connected and sound as it may be in many points, is not sufficient to convince me. I would, by no means, deny the antiquity of the original poem, nor the marks of archaism which it exhibits, and I accept with confidence the greater part of the interpolations which he proves to exist in it. What I cannot accept is the uninterrupted oral and popular transmission of the Sanskrit poem with its learned language and form from the seventh century before our era, when from the fourth century Sanskrit was as little spoken in the valley of the Ganges as it is now. I must add that this theory of the Sanskrit origin of the Randyana by no means takes up the whole of Prof. Jacobi's book. It contains further a careful comparison. I should rather say a statistical table, of the various recensions of the poem, and a very complete analysis of the contents. The whole is connected together by capital indexes, which render the book an indispensible help for investigation of the whole subject.

I shall close this review of the works which bear on the ancient Brahmanic system by mentioning a native publication intended to be a summary of the whole; the Aryadharmaprakasika. "the Explanation of Law," by Mandikal Ramasastrin, Principal of the Royal College of Mysore. 90 The work keeps in view the needs of scholastic instruction in the territories of the Maharaia of Mysore, and is a kind of explanatory, historical, and in the main practical, Catechism of Brihmanism. In 162 pages the author expounds in succession the four chief aims of life, the dharma, artha, kama and moksha; the duties of active life, both those which are common and those which belong to the various classes, men, women, castes and stages of life; the retired and meditative life, which gives occasion to pass in review the different philosophical and religious systems, including those of the Buddhists and Jainas, according to the sub-divisions made by the Brahmanic school when these latter sects are dealt with; the theory of the creation and destruction of the universe; the rules of religious piety and the means by which men may attain to the yoga, or communion with God, according to the different schools of the Vedanta : and finally the doctrine of the final reward of works. All this is put before us mostly in the very terms of the most authoritative books, the sûtras of the Vedánia and the Mimasisa, Manu, the Bhagavateits, the Bhagavate-Purana, etc. The author does little else than arrange the quotations from these works in due order, and explain and connect them. The selection of course is his own, and in this it is curious to notice his carefulness. As much as possible he has taken pains to give only what is good in itself, and wherever he has been obliged. in order not to break with the orthodox tradition, to give admittance to statements which are hard to defend, he is skilled in excusing and softening them down. For example, when, in the course of his exposition, he has to face the question of the caste system, he accepts it without hesitation and quotes the prescriptions of Manu; but he is careful, in his commentary, to set it forth as an institution highly useful and salutary for the individual and the community, and champions it as no writer would have done from the orthodox standpoint in Sanskrit for the last fifty years. The book, which does honour to the directors of public instruction in Mysore, and whose author has probably no great command over English, since he corresponds in Saiskrit, is then, in its way, a sign of the times. It shows how deeply the ideas of humanity, of justice, of reason, of a high standard of morality, which, in spite of many fine maxims in the

^{*} Ärzuilkarmapraktiiki, drynmaintativajijähmjenkuku upayogdya iriman Maktikrumakkrijd Klmardjenärdunjänyk irutinnpityläyarikin sainpikya Maktikrupurasthita Kiraikvilkaptikailkihyakukuna. Manjikal Rimaidetripi sirashiti, Mysoco, 1990.

native literature, are here the fruit of Western civilization, have made their way into the most orthodox circles. There is going on in India side by side with, and bearing on, this ancient Brahmanical tradition a two fool kind of activity. On the one hand criticism and archeology are ceaselessly and remorselessly exploring it; on the other hand more and more orthodox scholars are endeavouring to revive it, and this task is one of reform and purification. Amid the crowd of innovations which are invading India, many things which were believed to be dead for ever have been again called into life. The different branches of the Brahmasamaj combine the old eclectic theology with Positivism or Anglican piety. Others, again, are striving to revive Buddhism and they will doubtless succeed to a certain extent. Theosophists, occultists, and spiritists abound, all appealing to ancient tradition and all with an eye on practical life. It would be strange if only the genuine inheritors of that tradition should remain inactive amidst all the clamour around them, and should not hope to re-vivify that tradition, too, in an effectual way, with due regard of course to the needs of the age. And indeed they do not. To the samijas of their neighbours they set up in opposition other samájus of their own. Like them they have their own means of spreading their beliefs. I have spoken before of the Usha and its editor Satyavrata Samasramin. The prevailing note of his articles is that of the preacher and spiritual guide. The worthy translator of the Mahabharata, Pratapa Chandra Ray, is ambitious, not only to accomplish a literary task, but still more one of regeneration and social reform. In the past the defenders of orthodoxy fought by preference with the traditional weapons of Hindu polemics. They have had to exchange these for others which are more powerful. The Calcutta Review, the Asiatic Quarterly and other periodicals number more than one of these orthodox Hindus among their writers, and quite recently their doctrines have gained a new organ, the Hindu Mayazine. SI The sect, if we may give it this name, is by its descent an aristocracy, and has the distinguishing marks of one, reserve and dignity. We rarely meet in its publications with the truisms or empty pretence, which sometimes disfigure those of its rivals.

NARSINH MEHETANUN MAMERUN.

A POEM BY PREMANAND, TRANSLATED FROM THE GUJARATI WITH NOTES.

BY MRS. P. J. KABRAJI (Née PUTLIBAI D. H. WADIA).

Introduction.

THE poem forming the subject of this paper was composed by the Guiarati poet Premanand in St. 1739. It is a beautiful descriptive poem and illustrates an incident in the life of Narsinh Mêhêtâ, also a celebrated poet, and likewise an exponent of the Vaishnava theory. This incident was the occasion of the siment (or celebration of the 7th month in pregnancy) of his daughter Kunvarbal. The extravagance of high-caste Hindus on weddings and kindred occasions is proverbial, and it is generally known that if a girl's father is too poor to provide all the customary gifts be owes to his relatives and caste-people on such occasions, he either goes into debt or very nearly dies of mortification. Narsinh was called upon to provide all the usual gifts due from him to the parents of his daughter's husband and his sisters and brothers at the ceremony, and as he was only a poor ascetic and lived by begging, his enemies and opponents, as well as the prejudiced populace, were curious to see how he would face that demand. But it is related that, being a devoted servant of Vishun and under his special protection, Narsiah had no fears himself. He trusted to the god to provide all the necessary articles, as he had received a promise from him to help him in his emergency, and he emjoined his daughter to make a list of all the things, just as her parents-in-law might dictate. Now the elder relatives of bridegrooms are amongst these people held to be covelous and exacting, always ready to ficece the "poor luckless father

st Edited by America Led Roy, Calcutta. The first number appeared in September, 1861.

of diagniture," and Kunvarbal's husband's grandmother, in order to bring ridicule on Narsinh and his order, made such an exhorbitant demand on his resources that no man, however rich, could comply with it. But Narsinh called on Vishau to make good his promise and help him in this emergency, and it is said that Vishau promptly rushed to his assistance in the guise of a merchant with bundles of rich clothes and so on, and distributed them amongst all the relatives, demestic servants, etc., of Narsinh's daughter. This greatly surprised the Nagars and other non-believers, and they were thenceforth convinced of the truth of Narsinh's teaching. Since then the Mamerun of Narsinh Möheta has become a household word in Gujarat, poor parents of daughters comforting themselves by recounting the trials and threatened humiliation of that famous devotee, and his subsequent success through the intercession of Vishau.

A short sketch of Narsiah's life will be useful. Narsiah was born of poor, but respectable, parents at Junagadh in St. 1471. His father's name was Krishna Damôdar, and his grandfather was Vishnudas. They were Nagar Brahmans and worshipped Siva, while his mother had faith in Vishnu, and Narsiah imbited the first truths of that doctrine at her knee. There are two different classes of Brahmans, beggars and gentlemen, and Narsiah belonged to this latter class. There is no record of Gujarát having produced any poet before Narsiah, nor was there any exponent there of the Vaishnava theory preceding him.

Narsiilli was sent to school when a mere lad, but he made a bad scholar, and idled away his time in the company of sadhus and sannyusis outside the gates of Girnar. He was left an orphan while yet a child, and was dependant on his paternal uncle, till he reached man's estate and was married. But even after marriage he did not exert himself to earn his living, and would go about "dancing and playing on musical instruments like a woman," as the Nagars put it, and spend weeks together with the sûdhus without thinking of returning home. At this his wife's parents became uneasy about the fate of their daughter, and complained so bitterly that his uncle thought fit to rebuke Narsinh one day for his desultory habits; and his "sister-in-law" (wife of his cousin), a somewhat sharp-tongued young woman, made some very cutting remarks on the subject, which touched Narsinh to the quick and drove him in distress to his sadhu friends, who persuaded him to renounce all home-ties and join their order. So Narsiih turned his back upon Junagadh altogether and went and lived as a devotee at a temple on the seashore, and absorbed himself in the service of Siva. It is believed that gratified by his fasts and prayers, the god became visible to him and bore him with him to Vaixuith (Paradise), "where the god Krishna dances eternally with the gopis." Siva recommended Narsinh to the favour of Krishna, and Krishna bade him sing of his sportive circle and "made his language pure," and "increased his talent for devotional poetry infinitely."

Thenceforward Narsiah devoted himself to the service of Vishna, or Krishna, and composed a good many poetical works on the Vaishnava cult. His poetry is full of love and romance; and Krishna's birth in this world, his residence with the gôpikás in Vundrawan, and his amorous sports with them provided an endless theme for the exercise of his talent. Narsinh made a lábh and a quarter of couplets, but some writers ascribe 25,000 of them to his son's widow, Sursana, a lady of talent and virtue.

All his life long Narsinh was subjected to ridicule and persecution by the Nâgar Brâhmans, and once he was called upon to prove the truth of his doctrine by openly discussing it with the Nâgars. The poet did so, and was successful, and it is believed that, to accentuate his atterances, the god Vishnu himself appeared amidst the assemblage and threw a garland round his neck, in anknowledgment of his services!

Narsinh died in St. 1537 in the sixty-sixth year of his life. His followers have raised an idol to his memory at Junagadh, which is still worshipped by the Vaishnavas. An idol has also been set up to the memory of his daughter Knivarbal at Dwarka, and is worshipped to this day.

The state of the s

Nersiah has always been a most popular jeet. His verses, which are empositions set to different times in masic, are universally sung throughout Gujarát. In fact they are the love-songs of the people, men and women giving vent to their own emotions in the words of this poet. His style, it may be observed, is simple yet effective, with here and there goes word-pictures but hardly any metapher. He inculentes a sound morality and faith in the deity. But his chief charm lies in the simplicity of his composition. His name is a household word in Gujarát to this day, and the following poem of Prémarand on the subject of his daughter's mandocké, or maternity gifts, has never lost its interest for the people.

Translation.

Canto I.

Prelude.

May I always invoke with ease the aid of Srî Gurû Gappatî¹ and Sârdâ,² For it is the desire of my heart to sing of the māmērāh³ of Narsinh Mèhêtâ.

I hope to compose a poem on the maternity gifts provided by the Mêhêtâ.

Narsinh Mêhêta was a pious Brâhman and lived in Junagadh.4

5 His brother's wife spoke a (harsh) word to him which angered him.

(So) he renounced all home-ties and went to the woods to worship as an ascetic.

In that wilderness he saw a temple and the adorable symbol of Siva.

Narsinh worshipped it with earnestness in his heart.

The Melieta made seven fasts and then Bri Mahadevas was propitiated.

10 The symbol shone like Kamalae and instantly the god became visible,

With his wife Umiya, white as camphor, held on his left side,

Janhyi 7 adorning his matted locks 8 and his brow glistening like the moon,

The necklace of heads⁹ (thrown round his neck), serpents¹⁰ adorning him and tiger skins¹¹ lending beauty (to the whole).

Amidst a peal of horns and conch-shells and dánkis and dámrúis (and such other musical instruments), the great god burst upon the sight of Narsinh Mêhètâ.

15 Narsinh approached and fell at his feet;

When placing his hand on his head, said the husband of Umiya:— "Ask, ask a boon, I am pleased with thee."

The Mêhêtâ said:-" But one prayer I ask of you, Mahâdêvjî,

- "Now that I have cast my eyes on you, let me behold Vishnu."
- "Well done, well done, Sadhu,"14 said Siva, "thy faith is sincere."
- 20 (So) he took him with him to the eternal Vraj, 15 where Haris is engaged in his dance.

Refrain.

How will ye poets describe the beauty of the dancing circle? By the grace of Srî Harî, Narsinh has gained the object of his life.

2 The Goddess of Knowledge, also called Sarasvati.

4 See the Introduction.

A name of Siva.

The Goddess of Wealth - Lakshmi.

T Another name for the river Gaigs (Ganges).

¹ The God of Wisdom and remover of obstacles; hence he is invoked and propitiated at the commencement of every literary undertaking.

³ The word mamiran, or mission, implies all such gifts as some from the mother's side; hence all that a father gives to his daughter, or a brother to his sister, or a maternal grandfather to his grandchildren, is called mameran. The young wife, when about to become a mother, expects her parents to give gifts of money or clothes to all her husband's relatives, and throughout this poem the word mamiran implies these gifts.

s, e, 10, 11 Siva is represented wearing serpents round his head, and a necklace of skulls round his neck; his matted hair is gathered up into a coil over his head, on which is a symbol of the river Jankvi, which he caught as it fell from heaven. His garment is the skin of a tiger, or deer, or elephant.

^{19 15} Certain musical instruments carried by Siva.

¹⁴ A pious man, a devotee.

¹⁵ The paradise of Vishna.

¹⁴ Another name for Vishma, signifying 'god,'

Canto II.

Prelude.

The dancing circle shines with marvellous beauty, to see which is to forget all earthly

The gopika's sings, the musical instruments peal forth, Siva has poured the greatest blessing (on the Mêhêtâ).

25 The great king Siva-Mahârâj held the Mêhêtâ by the hand.

(And) seeing Sadasiva (do this) the Lord of Vaikunth came forward.

Both the gods greeted each other in delight and the gôpis placed their heads at 'Siva's feet (in adoration).

And Narsinh went forth and bowed his head before the Lord, when said the King of Vaikunth:—

"Tell us, Sadásiva, who this is, to whom you show this place?"

30 Mahadeva replied :- He is your worshipper and his name is the Vipra19 Narsinh.

Then placing his hand on his head, quoth Srî Gôpâl 20:-

"Think on me when in distress and I will hasten to thy aid.

Do thou worship me and sing my praises and thou wilt swim safely through the sea of life.

Do thou sing of this my sportive circle,21 full of love, as thou hast seen it here."

35 Then he showed him the dance of the sporting circle.

And spoke to Narsinh, spoke the Lord of the Triple City22:-

"Never fear the verdict of the populace in thy heart, but worship me at the risk of thy head.

Sri Gurû Ganapati Sûradû Hun samrun sukhê sarvadû

Manmudâ kahun mêmêrûn Mêhêtâ tanun rê.

Dha!.

Mâmêrûn Mêhêtâ tanun parabandha haravâ ûsa.

Narasinha Mêhêtê bhakata Brâhamana Junagadha mân vûsa.

A fabulous acrial city said to have been burnt in a war amongst the gods.

* The milkmaids with whom Krishna used to sport in his youth.

An epithet of Krishna, meaning the Protector of Cows.

If may be noted throughout this composition that the first two lines of each Canto usually come as a prelude in a different metre from the body of the Canto, which is headed at a dhat. At the end there is a refrain in a different metre again, in which the sense of the last preceding lines of the at a is repeated in nearly the same words. Similarly the succeeding Canto begins by repeating the last words of the refrain. To explain the composition, the first four lines are transliterated as follows, the Italies shewing the rhymes:—

In The Bas Mandal, or sportive circle, was formed of 1,600 gôpfkás (milkmaids), who danced round and round.

Krishna and his wife, Bådhå, who were in the centre; hence dancing forms part of this god's worship.

Sing of the pleasures of Radha-Krishna, as you have seen them here." Saying this vanished the god Bhild Snahkar.²⁵

40 And in a moment Narsian found himself in Junagadh.

Thenceforward the speech of Narsiih became purer, and his talent for devotional pomry increased immeasurably.

He became absorbed in the praises of Ridhi-Krishna and counted the world as but a stran.² Then, with music playing and songs singing, he entered the city.

And went and fell at the feet of his crother's wife.

45 "You have been as a priestess to me, (for) you spoke to me a harsh word, And by your righteousness I met both the gods.

Refrain.

By your righteousness, mother mine, the great Sri Parivrajh (Brahmå) appeared to me."

(And now) the Mêhêta's wife being a pious woman, he resumed the estate of a man of the world.

कडवुं २ जुं.

Canto III.

The Mêhêtâ resumed the duties of a man of the world, with a chaste and noble wite,

50 And began to worship Dâmôdar, 26 with the tilak 27 on his brow and a string of beads and the

symbol (of that god) in his hand:

With sadhus and vairages he would play upon the conch-shell admirably.

His yard was (soon) overgrown with tulusi29 plants and praises of Krishna were sung (in his house) day and night.

Neither the duties of the agriculturist, nor any other trade or profession had he. The Mêhêtâ was to all appearance a servant of Harî.

Adabhuta lilârasa *virôj°ji* darasana kidhê bhava dukha *bhôg'ji*. Gôpikâ gâya vajiùtra *vôjêji* mahâsukha didhun Sivamāhā*rājaji*.

And thus the different Cantos are composed in different metres, according to the requirements of each rag (tame). Narsinh is known to have introduced many new rags into the Ergyidys (music) of his country.

²³ Also an epithet of Krishna, meaning the Provider of All Good.

²⁴ This phrase is rather ambiguous in the text.

The metre of this Canto differs from the above as it will appear from the following lines:—

Prelude,

^{*}Another name of Krishna, meaning "girdled."

The symbol or sign painted on the brow of each follower of Krishna.

[&]quot;The sweet basil plant, specially used in the rites of Krishna-worship.

The Vaiduavases would eat just what they were given (in alms), and pass their days in singing praises.

55 The Creator of the Universe supplied them with food, (for the rest) the Mêhêtâ had great faith in his heart.

Göpäl gave him two children, one daughter and but one son.

He called the son Simaldas30 and got him married into a great family.

The daughter's name was Kunvarbaî, whose wedding he celebrated in good style.

(One by one) both his wife and his son died, and the Mêhêtâ's household ties were broken.

60 The chaste Sursênâ,31 his daughter-in-law, became a widow and led a solitary life.

The deaths of his wife and son moved even strangers to tears; but the Mêhêtû felt not a tithe of sorrow.

"So much the better" (quoth he), "there is an end to all bother: we shall worship Śri Gôpâl with all the more ease."

When Kunvarbai came of age, she was duly summoned to the house of her parents-in-law.38 Her husband's father was Śrîrang Mêhêtâ by name. They inherited a great name, and commanded much respect (in the community).

65 The family were full of pride and considered themselves great on account of their wealth.

The sisters-in-law would speak unkindly to Kunvarban, for they reckoned her poor.

They would say (ironically):- "You are welcome, daughter of the Vaisnava.

You have hallowed our house by your presence (in it)."

The mother-in-law in her arrogance would ridicule (poor Kunvarbâi).

70 (But) Kunvarbâî would not utter a word in reply.

Her husband was a mere puny lad, and had no appreciation of good.

(Though) Kunvarbai got into a state of pregnancy, he would not affectionately inquire (after her health).

(But) the increasing beauty of the daughter-in-law filled the minds of the household with love and delight.

They would say :-- "The Mêhêtâ is but a servant of Hari and from such what prospect of obtaining maternity gifts?

75 The occasion33 is passing away, so let us prepare some gifts for her ourselves.

The position of the pauper's daughter is pitiable, so let us put the bracelet34 round her wrist with due ceremonies."

So they did not send word to her father (about her condition), nor spoke of it to any one. and the fifth mouth passed away in vain.

A few days were wanting to the seventh month, when Kunvarbal began to be anxious: the poor young wife looked like one in debt; she went to her mother-in-law

And said, bowing low her head :- "Lady, pray, do not be angry with me, (if I ask you to) send our old priest Khôkhalô to Junagadh.

80 With a letter of good tidings; "then said the mother-in-law in her pride:---

"Why, daughter-in-law, why art thou turned mad? Thy parental home is lost to thee since thy mother's death.

What should we expect from him who chants ditties with musical instruments in his hands? Who earns his living by dancing and sporting, and in whose house poverty³⁵ walks to and fro?

sa See the Introduction. 32 The Hindu wife, though she marries in her infancy, lives under her parents' roof in her girlhood.

The bracelet is a thread prepared by the Brahmans with some rites, and is expected to ward off evil and maure sufe delivery.

²⁹ Meaning the Minist and his followers. The word is always Vaisnava in the text.

^{*} I. s., "Servant of Samal," a name of Krishna.

²² It is considered unlucky to allow such an occasion to pass away without the due rites. The fifth and seventh month are periods at which a charmed thread is put round the woman's wrist, and presents of clothes and ornaments re made to her both by her own parents and her husband's.

²⁵ I. c., the spirit of poverty personified.

What is the good of inviting a relative, whose coming can serve no purpose?

85 The name of Harî is dear to the Mêhêta and all the town will assemble to see him.

Only because you love to meet the old man, we shall have to incur ridicule from the community.

Rather than that your father-in-law should be dishonoured, we shall do without the newal's st visit."

Kunvarbaî's eyes were filled with tears at this and she said again to her mother-in-law: — "Mistress, do not put me off by such words; the poorest relative is a relative after all.

90 If he only comes here to go back (without bringing any gifts) I shall be glad of the opportunity of meeting my father."

These words moved the mother-in-law to pity and she went and spoke to her husband:-

"Her sîmant³⁷ is expected in a few days, and Kunvarbâl is obstinate (about meeting her father).

So you had better write a letter of good tidings and let the father and daughter meet.²⁸ Let us write a letter of good tidings to our vévés and say 'come here at any cost.'"

95 Srîrang Mêhêtâ was supremely kind-hearted, and he forthwith wrote out a letter:—
"In the name of Svastî²⁹ to Śrî Junagadh, which is the sanctuary of the Hari-Vaisnavas,

Thou ornament of the Nagar community, thou prince of Sadhus, high sud generous,

Thou chief of worshippers, Master of the Vaisnavas, may Kêsava⁴⁰ be ever gracious

Deserving all epithets, abode of mercy, Méhêtâ,41 Srîpât42 Narsahii by name,

100 Here we all are in health and happiness. Pray be kind enough to write us a letter.

We have some good news to communicate (to you), fortune has favoured us beyond measure Kunvar-vahu⁴³ has her *simant* near; such is the graciousness of Bhagavant to us.

Sunday, the 7th sudhi Magh, is the auspicious day we have chosen,

Pray, do not fail to come on that day, and bring your relatives and friends with you.

105 Have no fears in your heart, your visit will be worth millions to us.

When a loved relative comes to our door we should spend all the gold of Mount Merû in his honour.44

We shall be sincerely grieved if you do not come, Mêhêtâjî."

This letter was given in the (Rishi) Rusi's hand and the priest Khôkhalô went forth.

(But) Kunvarbai called him (back), sate him in a secluded place and fell at his feet.

110 "Remain there as a guest for a couple of days and tell Méhêtájî," she said. "tell him in a convincing way to bring some good things for the occasion,

And to come here, only if he has the means (to pay all dues).

Tell him that if he does something to keep up our prestige, the reproach of my husband's relatives will be lifted from me.

But if this occasion is allowed to pass off quietly (without the necessary distribution of gifts) the reproach will stick to me all my life.

My husband's sister will fling words like arrows at me, and his brother will stand in the place of an enemy.

#7 The seventh month in pregnancy.

It is considered a religious duty to gratify the wishes of a program woman.

40 An epithet of Krishna, meaning "of the hair," as he was born from a hair of Vishnu.

^{*} The fathers of the bride and the bridegroom are known as each other's wirdi, a relationship for which no term occurs in the English language.

This is the formula with which all Gujarāti letters are commenced:—Sarasvati, whose other name is Sāradā, he Goddess of Knowledge, is first invoked; then comes the name of the place from which the letter is written; then the name and epithets of the addressee; after that, the news that the addresser and his family are doing well, the wish that he should hear from the addressee; and lastly the purport of the letter. Letters bearing such "good tidings" as those in the text are aprinkled with \$\frac{\pi}{\pi}\$ (kakks) and are called \$\frac{\pi}{\pi}\$ (kaks)(arf).

⁴¹ A Brahman is generally addressed by this title.
42 Devoted worshipper; assetic.

⁴⁸ The termination rabs to a woman's name signifies daughter-in-law. But signifies daughter.

⁴⁴ Mount Merû is usually fabled to be a mountain of gold.

115 Tell him that I hope he will not draw forth the ridicule of the Någar caste (since) the Lord of Varkunth is our patron."

So saying) she sent away the priest Khôkhalô, who duly reached Junagadh.

Refrain.

When the Rusl entered Junagadh, the Méhêta fell at his feet:
And after the praise and worship they came to the object of the visit.

CORRESPONDENCE.

THE SAONTAL MIGRATION.

In my article under the above heading, at p. 295 of the *Indian Antiquary*, for 'Satt Sikar' read 'Satt Sikhar'

I am glad to find that Mr. Grierson, in his note to that article, while expressing no disagreement on any essential point, has cleared up one or two doubtful points, and enables me to rectify another. Some ambiguity has arisen through the use of the terms 'North-' and 'South-' Bihâr in different senses. I used these terms as equivalent to the Upper and Lower Sections of the Bihâr Province, bordering respectively the 'Upper' Province of the North-West and the 'Lower' Province of Bengal; and not as corresponding to the divisions of Cis-Gangetic and Trans-Gangetic Bihâr.

There are dozens of villages named 'Pipri' in the Section of Trans-Gangetic Bihâr alluded to, as a reference even to the village Postal Directories will shew, but the semi-aboriginal Pipri-garh near Chunâr figured by Mr. Nesfield (loc. cit.) is not impossibly the Pipri of the Saontal tradition; and the carrying of the Ahîr frontier upwards to the Gandak agrees all the better with a tribal progress from the North or North-East to account for the 'Turanian' element in their speech.

The location of Hardigarh in Baliya fits in admirably with the 'Hurredgarhi,' which intervened between Pipri and Chhai.

As, however, the subject is so important ethnographically it is to be hoped that some persons now in the localities under reference may test this new view of the Saontál migration; as, when I traversed most of the ground, this locale for the problem had not presented itself to me.

My identifications of Hardingarh, Chhât and Champâ and Kêrhiyâ, are not, I believe, likely to be upset. In any case the general outline, which I have sketched, must, until disproved, stand as the most reasonable attempt yet made at recovering the geographical basis for the traditional migration of the Saontal tribe.

L. A. WADDELL.

on some sanskrit verbs.

In his very interesting paper, "The Roots of the Dhatupatha not found in Literature," Dr.

Bühler adduces the verbal themes brud or vrud, used majjane, and as their corresponding verb, (e.g.), in Marāthi, bud (budanēm). Sanskrit bhrid, bul and mund, to sink, to dive, are corresponding verbal themes also.

In the so-called Dravidian languages the corresponding verbs are brungu, bungu (Telugu), murku, murgu (Tulu), mulku, muluku, muluku, muluku, mulugu, mulungu (Kannada), mulugu (Tamil), mukku, munnugu (Malayāja), munugu (Kannada, Telugu), munugu (Telugu).

In these Dravidian words the syllables ku. nku. gu, ngu, and nu are formative additions, the root appearing as mul. mulu. mur. mun. mun. mun, and muk. The original form of the root is mul. The letter 1 in Dravidian is often changed into r and l, (1), and through l into n or n. In mukku and munnu it has taken the shape of the formatives. In brungu there is seen the peculiarity of Telugu of occasionally placing a following r under the consonant of the first syllable, as in its braduku, to live, which is the same as barduku, balduku in Kannada. The root of brungu, therefore, is bur, and finally bul. The form bungu has arisen from the omission of r. as, for instance, Telugu uses baduku (batuku) for its braduku, and Kannada uses baduku for its barduku.

The almost general use of the initial letter m in Dravidian for the verbs under consideration affords no valid reason for doubting their close relation to those adduced from Sanskrit and Marathi, as it is well known that b, v, bh and m are cognate letters in Sanskrit as well as in Dravidian. Sanskrit mund (the p of which is euphonic) and Telugu brungu render this evident in the present case.

But how are the r in brud and vrud and the ri in bhrid to be accounted for, if the final themes, as the writer believes and the Marathi brud confirms, are brud, wud and bhrud? It is not impossible that we have here a peculiarity similar to that of Telugu, according to which it has the liberty of adding r to the initial consonant in cases wherein the r can scarcely be explained. There is, however, another way of accounting for the r and ri, which will be shewn later on.

But first it is movessary to render clear that the final letter d of the verbs can represent Dravidian 1, to which the writer points: e. g., the Telugu pogadu, to praise, and sudi, to wander about, in Kannada are pogal and sudi, and in Tamil pugal and culi, and the Kannada bisudu, to fling away, appears also as bisul. Further, I takes the place of 1 in Telugu kali, sour gruel, which is kali in Kannada: this may serve to explain the occurrence of 1 in Sanskrit bul. (The 1 in Marathi bolanem, adduced by Dr. Bühler, is the 1 which is often found instead of 1 in Dravidian words.)

Having briefly shewn the intimate connection of the Sinskrit, Marathi and Dravidian verbs, the writer adds that in his opinion the six verbs brud, vrud, bhrid, bul, bud and mund have been borrowed from the true Dravidian root mul. Sanskrit and its Vernaculars, having no letter 1, represented it by d and 1 (1).

With regard to the introduction of r into brud and vrud and ri into bhrid, it may now be stated that letter 1 is generally called rate in Kannada.

i. e., the la or l connected with ra or r. It is, therefore, not impossible that r and ri are somehow representatives of r.

There is another verbal theme with final d in Sanskrit that is used magné, viz., hud, to sink, to be submerged. This strongly reminds one of the true Dravidian hul, pul, (Telugu) pudu, to sink in or into.

Sanskrit themes vrud and bhrud, used samvritau, to cover up or over, strongly remind one of the true Dravidian hul, pul, pudu, to wrap up, to cover over, to bury;—and Sanskrit themes vrud, bhrud, hud and hund, used samhatau, sanghaté, sangé to heap, to accumulate, to join, of the true Dravidian hudu, pudu, to put together, to join.

The writer thinks that all these Sanskrit verbs are but modifications of the Dravidian ones.

P. KITTEL.

Tübingen, 12th December 1894.

MISCELLANEA.

FOREIGN NUMERALS IN TRADERS' SLANG IN SOUTHERN INDIA

Pandit S. M. Natesa Sastel in his interesting paper on Traders' Slang in Southern India (date, Vol. XXIII. pp. 49-52) is of opinion that his second group of numerals is a purely arbitrary one, with no meanings for most of the words employed. But any one acquainted with the languages of the Indian Archipelago will not fail to perceive that both the round figures and the symbols for fractions, which he gives, are almost wholly taken from some Indonesian idiom, say Batak, though they are certainly not from Malay or Achinese.

To prove the above assertion, it is only necessary to compare the Pandit's slang words with the numerals in Batak and Javanese:—

S. Indian Slang.	Batak.	Javanese.
1. si-	88-	88
2. to (ds)	dus	to (do)
3. tiru	tělu	tělu
4. påt	ĕpat	pat (older påt)
7. piehohu	pitu	pitu
8. vali	uvalu	volu (older vvalu)
9. táya	siya	sanga
10. puli	pulu	puluh

It would be difficult to decide whether the slang terms have been taken from some Batak dialect or from Javanese, were it not that the word tdya for 9 decidedly points to an origin in the former idiom, which has siya. Originally the Javanese form must have been sia, too, which by a peculiar tendency of that language has become changed into sanga, but we have no right to derive tâya from such a prehistoric sia, because sanga is found in the Javanese of ten centuries ago, which is the oldest known.

As regards the fractions, it seems clear that tangan is the same word as the Batak tengaan (in the Toba dialect pronounced tongaan), Javan. tengahan, half.

Sendalai (= \frac{1}{4}) is very interesting, because dalai is comparable with the Batak, Malay and Javan. tali, which is the term for half a suku. Suku means \frac{1}{4} (e. g., of a Spanish dollar). It follows therefore that sa-tali is "one-eighth." In the S. Indian word sen appears to be synonymous with sa, and it may be noted that the Dairi dialect of Batak regularly uses si instead of sa.

The word for is, sa-visam, is a compound of Tamil visam, one-sixteenth, and Indonesian sa, one.

The terms for 5 and 6, kulachchu and kiráti, I am unable to trace back to their sources. They remind one of culsey (see Yule-Burnell, Glossary) and Arab. kirrát, carat, from **epário**, but these terms could hardly have had the value allotted to kulachchu and kiráti in the slang. At any rate, these two words are not taken from any Indonesian language.

IDENTIFICATION OF NAGAPURA IN THE KONKAN.

THE copper-plate grant of the Silahara king. Anantadeva, contains, among other names, the of the following sea ports in the Konkan :- Sri Sthanaka, Nagapura Surparaka and Chemuli. In regard to the identification of Nagapura the late Hon'ble K. T. Telang (ante, Vol. IX. page 44) remarks :- "About Nagapur, I can only suggest it as probable, that it may be identical with a village near Alibag - between Alibag and Rêvadandâ - named Nâgânv, which is substituted by syncope for Nagagany, or Nagagrama, the same as Nagapur. Or, may not Nagapur have something to do with Nagothnen? In any case the modern Nâgour of the Bhônslês is not to be thought of. I have not found the Nagapur of our plate referred to anywhere else."

That his conjecture regarding the identification of Nagapur with the modern Naganv is the correct one, I think there can be no doubt. Amongst the mahitmyas of the Schnadri Khunda, of the Skandapurana, there is one on Nagapura,

called also Nazaruri see page 505. Bombay edition . That this Nagapura is to be identified with the mostern Nagativ appears probable from the description given in the Shoul sparant According to this account it is situated west of the Subgidri mountains, ver. 8; in the country called the Könkan, ver. 9; near the sea and the river Aghasi, ver. 4. This description answers to the modern Nagan c, situated south-east of Alikag. in the Kölib's District : see Bombau Guzetteer on Kolaba, page 351). It is between the sea and a creek, which I understand from local inquiry. is called among other names. Aksi, from a village of that name on its bank, between Naganv and Alibag. It is probable that Aksi is but a corruption of Aghasi. The ruins of temples, inscribed stones and in the neighbourhood point to the fact that, in ancient times, it must have been a port of some importance The above considerations make it very probable that the Nagapura of the copperplate is the same as the Nagapura of the Skandapuring and the modern Nagany.

The state of the control of the cont

J. E. ABBOTT.

NOTES AND QUERIES.

HINDU ASPECT OF PRAYER.

Védas and Sútras declare that a Hindu should turn his face in the morning either towards East or North, when performing religious ceremonies, worship, or repeating prayers; and to the West in the evening. To the South dwell the préts (ghosts) and rdkshasas (demons), therefore they do not look there, but face it while dining and offering cakes to the manes of the dead.

K. BAGHUNATHJI in P. N. and Q. 1883

BOOK-NOTICE.

A KANNADA-ENGLISH DICTIONARY, by the REVD. F. KITTEL, B. G. E. M. Mangalore; the Basel Mission Book and Tract Depository; 1894. Large 8vo., pp. 1, 1752.

The Kanarese language, — the original true vernacular, and still mostly the actual vernacular, of the territory in which lie the districts of Belgaum, Bijapur, and Dharwar, and parts of Sholapur and North Kanara, of the Bombay Presidency, the Kölhapur and other Native States of the so-called Southern Marâthâ Country, the Bellary District of the Madras Presidency, Mysore, and the southern portions of the Nizâm's dominions, - has hardly received from European scholars the recognition and attention which it deserves. It is the most mellifluous of all the Indian vernaculars, and the richest in capability and force of expression. It probably surpasses all the others in bulk and value of original composition. And it has an antiquity to which, apparently, none of them can make any pretensions in forms approximating to those which they now have. Mr. Kittel, indeed,

whose work we are now noticing, would seem. ingly give it a literary history from only about A. D. 900; from which point of view he divides its life into three periods, - (a) the ancient or classical period, from, he says, at least the tenth to the middle of the thirteenth century A. D., when it was elaborated to a high degree of polish, refinement, and clearness of expression, by the Jains; (b) the mediaval period, onwards to about the end of the fifteenth century, when the use of it was continued, in a somewhat less precise and unambiguous manner, by the Lingayat and other Baiva writers; and (c) the modern period, from then to the present day, during which the vernacular dialect, as now written and spoken, has been developed, by discarding the more high-sounding antique terminations, and, especially in the conversational branch, by adopting freely from Sańskrit, Hindustânî, and Marâthî. And no doubt it is true that the literary life of the language did begin in earnest at about the point of time selected by Mr. Kittel; the high state of (vyasta) (part) of the year indeed consecrate themselves those who consecrate themselves on the ekäshtaki ; there are the two seasons whose name is 'end.'

"They should consecrate themselves on the Phalguni-fullmoon. The mouth of the year indeed is the Phalguni-fullmoon; beginning the year from the mouth they consecrate themselves. In this there is one fault, vis., that the vishuvat-day (the central day of the sacrifice) falls within the cloudy time. They should consecrate themselves on the Chitrâ-fullmoon. The mouth indeed of the year is the Chitrâ-fullmoon; beginning the year from the mouth they consecrate themselves. In this there is not any fault.

"Four days before the fullmoon they should consecrate themselves; for them the buying of the soma falls on the ekáshṭaká; thereby they do not render the ekáshṭaká void. For them the pressing of the soma falls in the former (bright) half of the month. Their months are accomplished with a view to the former half. They rise (from the finished sacrifice) in the former half; when they rise herbs and plants rise after them; after them rises the fair fame. 'These sacrificers have prospered'; after that all prosper."

Tindya Brihmana, V. 9. — "They should consecrate themselves on the eküshtakü. For the eküshtakü is the wife of the year; in her he dwells that night. Manifestly beginning the year they consecrate themselves. In this there is that fault that non-rejoicing they step down into the water. With a view to the cleft (vichchhinna) (part) of the year they consecrate themselves who consecrate themselves on the eküshtakü; there are the two seasons whose name is 'end.' With a view to the injured (part) of the year they consecrate themselves who consecrate themselves with a view to the seasons called 'end.' Therefore the consecration is not to be performed on the eküshtakü.

"They should consecrate themselves in Phålguna. The mouth of the year indeed is the Phålguni (fullmoon); beginning the year from the mouth they consecrate themselves. — In this there is the fault that the vishuvat-day falls within the cloudy time. They should consecrate themselves on the Chitrâ-fullmoon. The eye indeed of the year is the Chitrâ-fullmoon; on the side of the face is the eye; from the face (i. e., beginning) commencing the year they consecrate themselves. In this there is no fault. — They should consecrate themselves four days before fullmoon. For them the buying of the soma falls on the vishuvat, etc., etc." (without any essential divergence from the concluding portion of the Taittirîya passage).

As the garám-avana is a festival celebration extending over a whole year, it is antecedently probable that it, or its introductory ceremony, should begin on some day which marked the beginning of the year, and that, therefore, the four different terms referred to in the passages above translated should represent either different beginnings of the year which were in use at one and the same time, or else, possibly, beginnings acknowledged at different periods. The latter view is the one adopted by Prof. Tilak and Prof. Jacobi. Professor Tilak assumes, with the Miminardas, whose discussions he quotes, that the last term mentioned, vis., 'four days before the full moon,' refers to the full moon of the month Magha, and that the Taitt. Sanh. and Tá. Brá. thus finally decide in favour of a beginning of the sacrificial year nearly coinciding with the civil beginning of the year. Now, it is probable, Prof. Tilak reasons, that the civil year began on the day of the winter solstice, and we therefore may conclude that the two Vedic books, which decide in favour of the gavám-ayana beginning on or about the fullmoon of Magha, were composed in the period when the summer solstice was in the asterism Maghas. This, he says, agrees with the position which the Véde assigns to Krittikas as the first of the Nakshatras; which position has always been explained as pointing back to the time when the vernal equinox was in Krittikas. Now Krittikas marked the vernal equinox, and Maghas the summer solstice, at about 2350 B. C., and this, therefore, is the time at which we must suppose the Taittiriya Sankiid and similar works to have been composed. If, then, we further find that the Taittiring Sankitá mentions two other terms for the beginning of the year-sacrifice, viz., the full moon in Phalguni and Chitri, we must conclude from analogy that those two terms also

once marked the winter solstice; and the rules prescribing them thus lead us back to about 4000 and 6000 B. C. respectively. Those rules were remembered at the time when the Taittiriya Sanhitá was composed, but, as no longer agreeing with the actual state of things, were mentioned only to be set aside in favour of the rule then in accordance with reality, vis., the one which makes the winter solstice coincide with full moon in Maghas.2

Professor Jacobi agrees with Prof. Tilak as to the significance of the rule which fixes the beginning of the year-sacrifice on the full moon in Phalouni. That rule, he says, must have come down from the time when the winter solstice actually coincided with the full moon in Phalguni, i. e., about 4500 B. C., in agreement with other Vedic passages which make the summer solstice fall in Phalguni.3 He does not, like Prof. Tilak and the Mimansakas, refer the term last mentioned ('four days before full moon') to the full moon of Marka, but takes it as a mere modification, of minor importance, of the third term mentioned, i. e., the full moon of Chaitra. And this third term itself he refuses to trace back, with Tilak, to the period 6000 before Christ, but prefers to take the clause stating it as a later addition, made to the text of the Brahmona at the time when Chaitra had begun to be viewed as the first month of the year, on account of its occurring about the time of the vernal equinox, i. e., during the centuries immediately preceding the Christian era.

We certainly have no right to declare the conclusions arrived at by Profs. Jacobi and Tilak alike to be altogether impossible. Vedic civilization and literature may be considerably older than has hitherto been supposed, and reminiscences of ancient observations may have been preserved in books themselves belonging to a much later period. At the same time, of course, we must, before accepting these conclusions, carefully enquire whether the passages, on which they are founded, really admit of the interpretations thus put on them, and of no It certainly is not antecedently probable that the Brahmana texts exhibited by us should, within their short compass, contain records of observations separated from each other by several thousands of years. Are we really obliged, we must ask ourselves, to ascend with Jacobi and Tilak to 4000 B. C., and to follow the latter scholar even into the dim distance of 6000 B. C., or else to precipitate ourselves, with Jacobi, in the opposite direction as far down as 200 B. C.? Or is there, perhaps, after all, some means of reconciling the different statements as to the beginning of the garám-ayana in such a way as to make them fit in with one and the same period, and that a period not too widely remote from the time to which works such as the Taittiriya Sanhita and the Tandys Brahmans have hitherto been ascribed? - I shall endeavour, in what follows, to show that this can be accomplished, and that the conclusions arrived at by Profs. Jacobi and Tilak cannot be upheld.

It will be advisable to consider, first, a passage, not discussed by Tilak, from the Kaushitaki Brahmana, which also treats of the proper terms from the beginning of the queamayona. That passages occurs in the 19th book (2; 3) and translated runs as follows:

"They are to consecrate themselves one day before the new moon of Taisha, or of Magha: thus they say. Both these (alternatives) are discussed; that of Taisha, however, is more agreed to, as it were. They (thus) obtain the additional thirteenth month. So great indeed is the year as that thirteenth month; then the whole year is obtained. He (the sun) indeed rests on the new moon day of Magha, being about to turn towards the north. Thus they rest who are about to perform the rites of the prayaritys stirates (the first day on which some is pressed). Thus they reach him for the first time. They begin him, etc., etc. He goes for six menths

² The first mentioned term, vis., the eldelight, which furnishes no special date, need not for the moment be taken into account.

² These passages will be referred to further on.

⁴ Attention was first directed to this passage by Prof. A. Weber in the second of his essays out he Makshatras (pp. 546 ff). That these essays have since their appearance formed the basis of all further research in matters connected with the Makshatras, is generally known 2 commitming the time when they were published, the fullness and accuracy of the quotations made in them from Vedic literature are truly admirable.

towards the north; they follow him with the ascending celebrations of six days each. He having gone six months towards the north stands still, being about to turn towards the south. Thus they stop, being about to perform the rites of the vaishuvativa day. Thus they reach him for the second time. He goes six months towards the south. They follow him with the returning celebrations of six days each. Having gone six months towards the south he stands still being about to turn towards the north. Thus they stop, being about to perform the rites of the Mahdavativa day. Thus they reach him for the third time. Because they reach him three times, the year is arranged threefold; for obtaining the year (they do thus). About this there is sung a sacrificial stanza 'Arranging the days and nights like a wise spider; six months always towards the south and six towards the north wanders the sun.' For he goes six months towards the north, six towards the south.

"They are not to consecrate themselves at that time. The grass has not yet come out, the days are short; shivering they come out of the avabritha-bath. Therefore, they are not to consecrate themselves then. They are to consecrate themselves one day after the new moon of Chaitra. The corn has come out then; the days are long; without shivering they come out of the avabritha-bath. Therefore this is the established rule."

This passage, we see, mentions three different terms for the beginning of the gavámauana, viz., the day following the new moon of Taisha, the day following the new moon of Magha; the day following the new moon of Chaitra. The two former terms are, however as will appear later on - variations of one term only, and we therefore may confine ourselves to the consideration of that term which the Brahmana declares to be preferable, i. e., the beginning of the dikshá on the day following on the newmoon of Taisha. We also, following the explanation given in Vinayaka's Commentary on the Kaushitaki Bráhmana, understand by the new moons of Taisha, Magha and Chaitra the new moons preceding the full moons in Tishva (= Pushya), Maghās and Chitrā. This does not even compel us to assume, with Vinayaka, that the Brahmana reckons its months from full moon to full moon, so that the months would begin with the dark half (although to this also there would be no particular objection). In the strict terminology of later times indeed the amávasyá of Taisha could be the amávasyá preceding the full moon in Tishya, only if the month Taisha were reckoned from full moon in Mrigatiras to full moon in Tishya; while if it were reckoned from new moon to new moon the amavasya of Taisha would mean the last tithi of the dark half following on full moon in Tishya and preceding full meon in Maghas. But there is no reason compelling us to assume such strictness of terminology for the time of the Brahmana, especially when we consider that new moon is, strictly speaking, not a lunar day, but only the moment when the dark half comes to an end and the light half begins; so that the beginning of the first day of the light half has as much right to be called 'amdrasya' as the end of the last day of the dark half. The text thus teaches that the diksha has to begin one day after the new moon which precedes full moon in Tishya; in consequence of which the upavasatka celebration, which immediately precedes the first day on which Soma is pressed, falls on the new month of Magha (i.e., the new moon preceding full moon in Maghas). This is accurate; for from the day after the Taisha new moon up to the Magha new moon there elapse twenty-nine days, seventeen of which are required for the diksha and twelve for the so-called apssud. The result of this arrangement is that the real celebration. as distinguished from all introductory ceremonies, begins together with the 'resting of the sun' before he starts on his progress towards the north. The text thus clearly indicates that what is to be aimed at is the coincidence of the beginning of the year-sacrifice with the winter solutice.

Equally clear is the motive which determined the second alternative allowed — or as it rather appears, preferred — by the Brahmaga. The gardin-ayans is to begin one day after the new moon of Chaitra, i. c., three months later than on the first alternative, because then the season is more advanced and agreeable, the days are longer, and the water more pleasant to bothe in.

The impression which the coupling of the two alternative beginnings thus leaves on our mind is that the original intention and practice of the Kanshitakins was to begin their year-sacrifice on the day of the winter solstice, thus following the sun in its upward course with the first six sacrificial months, and again in its downward course with the latter six months. But gradually the sacrifice, as it happens in such cases, became more and more formal; the old beginning was no longer insisted upon, and a new one, more convenient in several respects, was substituted. But there is nothing to indicate that the two beginnings allowed are connected with beginnings of the civil year recognised at different periods. Some sacrificers preferred the solstitial beginning, some the vernal one; that is all. It may be added (which point has likewise been referred to by Prof. Weber already) that the corresponding Srauta-Satra, the one by Sankhayana, mentions only the solstitial term which thus seems to have finally prevailed in the practice of the Kanshitakins.

The passage quoted from the Kaushitaki-Brāhmaṇa, however, has a further importance, in so far as containing a definite statement concerning the relation of the lunar calendar of the time to the solar year. It says that the winter-solatice coincides with the new moon of Māgha, i. e., as we have explained above, with the new moon preceding full moon in Maghās. We here are on well-known ground; for that the winter-solatice takes place at the beginning of the white half of Māgha (or the end of the âmavasyā of Pausha) is the well known doctrine, so often discussed, of the Jubiisha Vēdāāja.

From this there immediately follows that the winter-solstice itself is in Sravishthas, etc., etc.: in fact the whole system of the *Jyôtisha Védánga*. And we thus must finally conclude that the *Kauskitaki-Bráhmaṇa* itself — unless it be assumed to record observations made at an earlier time — belongs to the period when the winter-solstice was supposed to be in Sravishthas.

Having thus seen that the data which the Kaushitaki-Brahmana supplies concerning the beginning of the gavam-ayana do in no way lead us back into very ancient time, we now return to a consideration of the Taittiriya and Tandya texts. The question here naturally presents itself whether those texts cannot be interpreted in a somewhat analogous way, so as to enable us to connect them with one and the same period, not very distant from the period of the Kaushitaki-Brahmana. Cannot, we ask, the alternative dates given by the Taittiriya and Tandya be accounted for by the assumption that at one and the same time the gavam-ayana was optionally begun at different periods of the year, for reasons sufficiently valid to explain such difference?

We here begin by enquiring what may be the meaning of the assertion that the full moon in Phalguni is the mouth, i. e., beginning of the year. This statement, or the closely-related one that 'the (mouth) Phalguna is the mouth of the year' occurs in numerous other places of the Brahmayas, also in the Tundya Brahmaya, and must therefore be held to represent an opinion generally prevailing in what we may call the Brahmana-period. Where then has this beginning of the year to be placed? Either, we feel naturally inclined to reply, at one of the solstices or at one of the equinoxes. Now that the solstices were, in India, looked upon as marking the beginning of the year we know positively from the Jyötiska Pédéiga and similar works (not to speak of the whole later literature), and also from the Kaushitaki passage discussed above; for that the year-sacrifice is made to begin with the winter solstice implies the view that the winter solstice is viewed as the beginning of the natural or civil year. Moreover the Vėdas contain numerous references to the northern and southern progress of the sun, and it, therefore, is antecedently probable that the solstices should have formed starting points for the civil year. In so far Tilak's and Jacobi's view of the Phalguni-fullmoon once having marked for the Indians the winter solstice is not unlikely. On the other hand it is not antecedently probable that the passages about the gavam-ayene in the two Brahmanes should contain an agglomerate of rules that had originated at periods widely remote from each other, and we, moreover, have

the direct statement of the Kaushitakins that the winter solstice happens on new moon preceding full moon in Maghas: we, therefore, may at any rate, attempt to account on other grounds for the statement that Phalguni-fullmoon is the beginning of the year. Now, it is, of course, at once clear that, in the Brahmana period, full moon in Phalguni could not have coincided with the vernal equipox. We, moreover, must, apart from this particular case, disabuse our minds of the notion of the equinoxes - vernal or autumnal - having been of any importance for the Hindus previous to the time when the influence of Greek astronomy began to make itself felt. It is, in the first place, a fact that the equinoxes naturally do not attract attention in the same way as the solatices do. At the equinoxes the motion of the sun - towards the north or the south - undergoes no noticeable change; the fact that the sun then rises true east is not easily remarked, nor the fact that day and night are of just the same length. The solstices on the other hand attract attention because they are the periods of greatest deviation from the normal state: the sun then stands highest or lowest; the days are longest or shortest; the shadows are shortest or longest; the sun turns towards the south or the north. I need not further dwell on these obvious distinctions; but I must refer to a further and more important point, viz., that, in India, the vernal equinox at any rate does not in any way mark an important point in the revolution of the seasons (about which further on). It is in agreement with all this that the equinoxes or anything connected with them are nowhere in Vedic literature referred to. either directly or indirectly. What may be the meaning of the fact that the oldest list of the Nakshatras begin with Krittikas we shall consider later on. If, therefore, some reference to the beginning of the year made in Vedic literature should not immediately and obviously connect itself with the solstices, we have no valid reason to think in the next place of the equinoxes, but must look out for some other likely point from which the year might have commenced.

Now, what here immediately offers itself to our attention is the old subdivision of the year into three seasons, which is in several places directly acknowledged, and moreover pre-supposed by the so-called chaturmasya-sacrifices. Professor Jacobi's second paper is specially devoted to a refutation of the view, admitted by him as not unlikely à priori, that the beginning of the oldest Indian years coincided with the beginnings of those four-monthly periods rather than with the equinoxes. I do not, however, agree with his conclusions on this point. He starts with the observation that when attempting to assign the beginnings of the four-months periods to the proper places in the solar year we must take for our point of departure the beginning of the rainy season, which alone is sharply marked, while it would be difficult to say exactly when either the cold or warm season begins. And as the rains commence about the summer solstice, the beginning of the cold season must be placed, he says, about a month after the autumnal equinox, and that of the warm season about two months after the winter solstice. - Now, these remarks are doubtless true in so far as they point to the rainy season as the best defined period in the Indian year. They, however, err, I am inclined to think, in the actual allotment of the months to the three seasons. A division which, on the basis of three different seasons, distinguishes three four-monthly periods can never be quite accurate, because the rainy season occupies less than four months, strictly speaking not

The Indian year broadly divides itself into three seasons, — the warm season, the rainy season and the cold season, — just as the European year naturally divides itself into summer and winter. And as the wish of making finer distinctions leads to the insertion into the European year of two transitional seasons — spring between winter and summer, and autuum between summer and winter —; thus in India two further seasons were in course of time added to the three primitive enes; spring between the cold season and the warm season, and autumn between the rainy season and the cold season. Between the warm season and the rains there is no transitional season, and hence the five-season system is, next to the three season system, the only instural one. The system so extensively used, which distinguishes six seasons, is an artificial one, manifestly due to the wish of establishing a regular and easy correspondence between the seasons and the twelve months of the year; two months going to each season. The insertion of a cool season, '(iddees) between winter and spring is not have on complexous natural relations, and it moreover is an unjustified proceeding to allot to the rainy season less than three months. The consequence is that in whatever way we distribute the months among the different seasons, the distribution will always, at some point or other, be in conflict with the actual phenomena of the year.

much more than three months. If, therefore, the principle of four-monthly divisions is to be adhered to — as it actually was — a compromise has to be arrived at, in so far as either same weeks previous to the beginning of the rains, or some weeks after the cessation of the rains, have to be comprised within the rainy season. Now, nobody acquainted with the seasons of Northern India will in this case hesitate to make his choice. If four months must go to the rainy season they can only be June to September. or, perhaps better, end of first week, or first third, of June to end of first week, or first third, of October; not July to October, nor even the period iron summer-solstice to twentieth October. The reason of this is that with the beginning of October the rains are as a rule completely over; while on the other hand showers of rain, more or less heavy in different districts, often fall even in the earlier part of June - let us say from a fortnight before the summer solstice. The jour-monthly rainy season therefore begins about the seventh or tenth of June and terminates about the seventh or tenth of October. The consequences to be drawn from this, with regard to the two other four-monthly periods, also agree perfectly well with the real state of things. In the earlier part of February the increase of warmth is already very perceptible; the true cold season is over. And early in October, when the rains have stopped and the atmosphere is no longer saturated with vapour, a refreshing coolness sets in, specially remarkable in the mornings and evenings, which quite justifies us in viewing that time as the beginning of the cool season.

What then, we have next to ask, have the Brilmanas to say on that point? - Of the sacrifices called chaturmasya, which mark the beginning of the seasons - they are called rite mukháni in the Satapatha — the first one, called vaisvadéva, has to be performed either on the Phâlgunî Paurnamûsî or on the Chaitrî; the second one, the so-called varunapraghásás, on the Âshâdhî or on the Srâvanî; the third one, called sakamêdhas, on the Kârttikî or the Âgrahâyanî. The texts always mention the vaisvadeva first, which means that in the Brehmana period the prevailing opinion was that the year begins with the warm season. Now, what the position of the Phalguni-fullmoon in the solar year is, we learn from the Kaushitaki-Brahmana, which tells us that the winter solstice coincides with new moon preceding the Maghi full moon. Full moon in Phalgunî thus takes place one and a half month after the winter solstice, i. e., about the end of the first week in February, and this, as we have seen, is a period which may not unsuitably be looked upon as the beginning of the warm season. We now fully understand why the Phalguni-fullmoon is called the month of the year; it marks the beginning of that four-monthly division of the year, which is generally considered the first one. And we further observe the full agreement between the statements about the Phalguni-fullmoon, and what the texts say in so many places about spring being the first season, the mouth of the seasons, a. s. o. For spring constitutes the former half of the four-monthly warm season. The beginning of the spring of the Brahmanas is thus in no way connected with the vernal equinox. but rather takes place one and half month before it.7

If, with these conclusions in view, we now return to the rules given by the Tuittir'ya Samhitá and the Táṇḍya Bráhmaṇa about the beginning of the gavām-ayana, we shall find

⁶ In what follows I use the names of the months throughout as denoting subdivisions of the tropical year;
June being the month at the end of whose second third the summer-solution takes place, etc. The names therefore
will apply, without change, to any period.

Spring begins at the same point in the calendar established by Julius Casar; and also in the calendar of the Chinese. Cf. Ideler, Chronologie, II. p. 143 (Veris institum—7. Februar); and Ideler, Zeitrechnung der Chinesen, pp. 15, 136 ff.

In the Jyôtisha Vêdânja (v. 6) the year is said to begin with the winter solstice, the month Mågha and 'tapas' — which latter term, whether taken as denoting a season or a month, can only mean that the first season of the year is the 'cool,' season Sistra; for tapas and tapasya are, in the old scheme of six two-monthly seasons, the names of the two itira-months. Spring then begins not about the 7th, but about the Alst of February. The Jyôtisha of the two itira-months. Spring then begins not about the 7th, but about the 21st of February. The Jyôtisha of the two itira-months are saide the old belief about the Phâlguna full moon marking the beginning of spring; being apparently guided by the desire of making the winter solstice—the beginning of the year and yaya—formally coincide with the beginning of a season. That in reality the winter solstice has no right to be viewed as the beginning of a season, and certainly not of one whose first month is called 'tapas' will, of course, be evident to any one familiar with the seasonal changes of Northern India.

them perfectly perspicuous and coherent. I do not now discuss in detail the beginning on the chushtaku, and remark only that, if the chushtaku is - as the commentators sav - the eighth day after full moon in Magha, the beginning of the sacrifice on that day is rightly objected to as falling within the season which is the 'end' of the year; for it falls within the last month before Phalgunt-fullmoon, which marks the beginning of the new year. The Tandya further rightly objects to it that the water is then unpleasantly cold for bathing. That, as Prof. Jacobi remarks, this objection could not be raised by those who take the Phalganî-fallmoon for their beginning, because within the 24 days between the ekashtuki and Phalouni-fullmoon the water does not become sensibly warmer, I cannot admit. Just at that season the difference would be a very perceptible one; and the whole question loses in importance, owing to the fact that after all the Phalguni-fullmoon is immediately afterwards itself rejected in favour of the Chaitri-fullmoon. The texts next both mention the Phalcuni-fullmoon as the proper day for beginning the sacrifice, because it is the 'mouth' of the year. This is in order as we have explained above. Equally justified is the rejection of this alternative for the reason that it involves the falling of the vishuvat-day within the cloudy season. For from those who begin the d kshd on about the 7th of February, the vishuvat falls end of August, within the rainy season. Equally intelligible is then the third alternative, which decides for Chaitri-fullmoon. For those who begin the dikshil on that term, celebrate the vishuvat-day at the end of September, when the rains are over. Nor is there any objection to the Tailtiring Samhitá speaking of the Chaitr'i-fullmoon as an alternative beginning of the year. For, as we have seen, the Phâlgunî-fullmoon stands just on the confines of the cold season and spring, and it, therefore, is quite intelligible that some should prefer as the beginning of the year the first fullmoon which falls within spring, and cannot be claimed by the cold season also, i. e., the Chaitri-fullmoon. And again, we clearly see why the Tándya, in order to escape the somewhat awkard admission that two consecutive full moons are both called the mouth of the year, prefers to call the earlier full moon the mouth, and the later one the eye of the year. - To the fourth alternative, according to which the d.ksha begins 'four days before full moon,' we shall return further on.

The same reasons, which induce the Brahmanas to mention the Phalguni and the Chaitri as optional beginnings of the gavám-ayana, account for the differences in the terms assigned for the chúturmásya sacrifices. The Bráhmanas and some sútras prescribe the Phâlguni, Áshādhi and Kârtikî full moons, i. e., they adhere to the strict beginnings of the three fundamental seasons; other sûtras admit as alternatives the Chaitri, Srûvanî and Âgrahâyanî full moons, i.e., they allow the sacrifices to take place, not exactly at the beginning of each season, but in its earlier part when it has well established itself. And here we must not forget to take into account a further circumstance, which most likely has had its share in leading to the establishment of alternative beginnings. As the lunar months lag behind the seasons, the Phâlguuf-fullmoon, which in one year may coincide with, let us say, the 7th of February, will fall in the next year about twelve days earlier, and again twelve days earlier in the third year; so that by that time it will be twenty-four days less remote from the winter solstice than at first. Any further displacement will, of course, be stopped by the insertion of an intercalary month at, let us say, with the Jyôtiska Védánaa, the middle of the third year, which will restore the disturbed harmony between lunar and solar time. But it is clear that those who wished their vaisvadeva sacrifice in the third year to coincide with the actual beginning of spring would give the preference to chaitre paur namuse over philguni; and that there was some excuse for doing so in the second year already, considering that even in the normal year the Phalguni-fullmoon lay right on the confines of the cold season. Displacements of the kind described may also account for the fact that according to some authorities the vaissadeca sacrifice might be offered as late as Vaisakhifullmoon.

In order to complete the discussion of the passages from the Taittiriya Sanhita and the Tandya Brahmana, it remains to enquire into the meaning of the first and the last terms mentioned, viz.,

the ekashtaka and the 'fourth day before full moon.' The ekashtaka the commentators declare to be the eighth day of the dark half of Magha, i. e., the eighth day after full moon in Maghas, the months being counted as beginning with the light half. Professor Jacobi thinks that this term was advocated by those who wished to perform all introductory rites before the Phalganifullmoon day, so that the real sacrifice could begin on the latter, the true beginning of the new year. But, as he himself points out, the introductory rites require twenty-four days, while the time from the eighth of the dark half of Magha up to Phalguni-fullmoon comprises twenty-two days only. Moreover, the designation of the ekashtaka as the 'wife of the year' in different places and the fact of certain special rites being connected with it, seem to indicate that the ekāshtakā had quite an independent importance of its own: was, in fact, specially connected with the beginning of the new, or end of the old, year. If the year is viewed as beginning with Phalgunî-fullmoon, the light half of Phalguna, although really preceding the new year. might yet be viewed to belong to the new year, just because it is the light waxing half of the month, and in that case the ekáshtuká, as marking the last quarter of the last waning half of the old year might not inappropriately be viewed as representing the end of the old year. It might, in fact, be viewed so also, if the months are reckoned from full moon to full moon, in which case the whole of Phâlguna. i. e., the month preceding Phalguni-fullmoon, would belong to the old year. Another possibility may also be mentioned. If, as said just now, the months are counted from full moon to full moon, the dark half of Magha is not that half which follows Magha-fullmoon, but rather that which follows Paushi-fullmoon, and in that case the eighth day of the dark half of Migha would precede the solstice coinciding - as in the Kaushitaki Erahmana and the Juctisha Veilanga - with the new moon preceding Maghi-fullmoon. The ekishtuka would then be the last quarter preceding the winter solstice, and as such represent the end of that form of the year. which is reckoned from winter solstice to winter solstice. In that case the beginning of the gavám-ayang with the ekáshtaká, according to the Taittir ya Samhitá and the Taindya, would be analogous to the beginning on the amavasya of Taisha or Magha, i. e., in both cases we should have to do with a beginning connected in some way with the winter solstice. - As to this latter explanation I, however, must remark that it is contradicted by those Satra texts. which define the ekűshtakú, not merely as the eighth of the dark half of Mügha, but more definitely as the eighth day after Maghi-fullmoon.

Howsoever this may be, in either case the objections raised in the Taitt. Said. and the Tândya against the ekâshtakâ-term are quite intelligible. The ekâshtakâ falls within the last season of the year, whether that last season be the one preceding the Phalgunl-fullmoon, or the one preceding the winter solstice; hence the 'antanâmânâv ritû' of the texts. In each case we have to do with the cold season, which is ârtta, distressed or injured. And if the rather indefinite terms 'vyasta' and 'vichchhina' should, as the commentators say, refer to the turn of the year connected with the winter solstice, this also would agree with the above explanations, because the ekâshṭakâ falls within Magha, which is the month of the winter solstice.

The last term mentioned in the Taiti. and Tandya has, as Prof. Tilak points out, become the subject of a Mimainsa discussion, since the texts do not indicate directly which full moon is the one, four days before which the diksha has to begin. The point is of no great importance for us here, as in the case of either possible decision the term does not greatly differ from one of the three others. If we, with the Mimainsakas, decide for the Maghi-fullmoon, we have a beginning of the year in the same month as the chashtaka (or at any rate separated from the latter by twelve days only); if, on the other hand, we decide for Chaitri-fullmoon, the term nearly coincides with the third term. I, however, must say that the Mimainsa view appears to me in this case quite untenable. For the soundness of Mimainsa decisions in general I have the greatest respect, and it, moreover, is highly probable that in many cases the Mimainsa verdict must not be judged on its own merits only, but also as representing an old tradition; the Mimainsaka knew beforehand what the outcome of his argumentation was to be. But.

in the present case, the context of the two passages really admits of no other interpretation than that in favour of Chaitra-fullmoon. The text first states the ekashtaka and Phalouni alternatives and rejects them both on account of certain shortcomings: then states the Chitra-alternative and adds expressly 'in this there is no fault.' When, therefore, it after that goes on 'let them consecrate themselves four days before the full moon' that full moon can only be the Chaitri-fullmoon just accepted, which term is now, for certain liturgical reasons, slightly modified. The ekúshtakú, mentioned afterwards, is then not the ekúshtakú of Macha mentioned first, but one of the eliáshtakás following on Chaitri-fullmoon. None of the Mimáinsa reasons for the Machi-alternative is more than ingenious. That the Sútra-writer Laugakshin (quoted by Prof. Tilak) accepts that alternative, only shews that, in making up his mind in this doubtful case, he was guided by considerations, similar to those which determined the decision That, however, Jamini's Pûrvapaksha was actually the siddhanta of other authorities, appears from a passage in Apastamba's Srautu Sútra, where the terms for the beginning of the aaram-ayana are discussed. We there read they are to consecrate themselves four days before full-moon; before the full moon of Magha, so Asmarathya thinks; before the full moon of Chaitra, so Alekhana thinks.'

Having thus shewn that the Taittiriya and Tandya passages about the beginning terms of the gavam-ayana can be explained quite satisfactorily and coherently, if viewed as referring to the time when the winter solstice had the position assigned to it in the Kaushitaki Brahmana and the Jyotisha Vedanga, we now turn to the other principal arguments by which Profs. Tilak and Jacobi undertake to support their views of a Vedic winter solstice coinciding with Phalguni-fullmoon. We first consider the fact - referred to by Jacobi and discussed at length by Tilak—that the month commonly known as Margasirsha, one of the autumn months, is also called Agrahayana, which word can only mean 'beginning the year.' Now this, it is argued, confirms the hypothesis of a Vedic summer solstice in Uttara Phalguni; for when the solstice had that position, the vernal equinox was in Mrigasiras, and hence the moon was full in that nakshatra at the time of the autumnal equinox, in the month Margasirsha. Hence those, Prof. Jacobi says, who began their year with the autumnal equinox, could apply to Margasirsha the term 'Agrahayana,' ' beginning the year.' Professor Tilak proceeds somewhat differently. He does not explain 'Agrahayana' as meaning the month beginning the year; but rather as the month in which the moon is full in the nakshatra 'Agrahayana,' i. e., the nakshatra Mrigasiras, which was called 'beginning the year,' at the time when it marked the vernal equinox. So far as Profs. Jacobi and Tilak differ in their explanations, I agree with the former. What - apart from the view I shall set forth immediately as to the true cause of the name Âgrahâyana being applied to Mârgaśîrsha — is decisive in this case is, firstly that Mârgaśîrsha is actually referred to as the first of the months; and secondly that Agrahayani is explained by all the Hindû authorities as meaning 'the first night of the year.' Against their anthority Tilak's learned grammatical discussion is of no avail. Moreover, 'Agrahayana,' as a name of the nakshatra Mrigasiras, is nowhere in Sanskrit literature actually met with. But that, in order to account for words, such as agrahayana and agrahayana, as denoting the Margasirsha month and its full moon night we need not accept either Prof. Jacobi's or Tilak's explanation, can be easily seen. The beginning of the year with Margasarsha belongs to those who, wishing to have a sarad-year—as Prof. Jacobi calls it, looked on Chaitrifullmoon as beginning the warm season; those in fact who celebrated their third châturmasya on Margasirsha (see above). That a beginning of the year at the time when the rainy season is over was in certain circles a popular one, appears from the fact that a year commencing with Karttika was generally used by astronomers in later times. This Karttika year might possibly have originated in an early period already, marking the commencement of the sarad-year for those who began their warm season with Phâlgunî; there, however, are, as far as known to me, no really old traces of it, and it, therefore, is more likely that it was introduced

when, with the general reform of astronomy, the equinoxes came to be taken into consideration, and Kârttika was found to coincide with the autumnal equinox. Professor Jacobi's remark, that there is no likelihood of the year ever having begun with the last season, is not, I think, of much force. The general later use of the Kârttika year shews that a beginning of the year with the time when the rains are over was popular within wide circles; and to those who divided their year into three four-monthly seasons only, and at the same time preferred Chaitri as the commencement of the warm time, there was no choice but to begin their postpluvial season with Mârgaśîrsha. In general it may be said that the time after the rains, when the sky clears itself from clouds, the atmosphere from vapour, and an invigorating coolness begins to prevail, is a by no means inappropriate beginning for the Indian year. — Compare also what Prof. Weber says (p. 333) as to the Northern Buddhists generally beginning their year with the winter-season.

I next turn to the other arguments adduced by Prof. Jacobi to strengthen or introduce those conclusions of his which we have so far considered. His first paper begins with an attempt to shew that we meet in the Véda with traces of Phalguni once having been recognised as marking the summer solstice (with which would agree the conclusion discussed above of the winter solstice coinciding with Phalguni-fullmoon). He at first adduces the passage Riqueda Sanh. VII. 103, 9, in order to prove in general that the Sanhilas already mention a beginning of the year with the rainy season, the commencement of which coincides with the summer solstice. That the year - later, as Prof. Jacobi points out, called varsha or abda - should have sometimes been viewed as beginning with the rainy season is à priori by no means unlikely; there is, in fact, no reason why any of the three great seasons should not, from certain points of view, have been looked upon as the first, and the beginning of the rains is certainly the most striking of the seasonal phenomena of the Indian year. That the passage Ri. Smak. VII. 103. 9, however, cannot be used for proving that the twelfth month of the year occurs about the time of the beginning of the rains has been already remarked - and in my opinion with full justice - by Prof. A. Weber (Velische Beitrage, 1894, page 38), and Prof. E. Windish (Z. D. M. G. Vol. 48, page 356); for 'dradasasya' in that verse certainly means the vear (sasivatsara) - mentioned immediately afterwards - which consists of twelve months.

Professor Jocobi next explains the well known passage in the Süryä-sükta (R. S. X. S5, 13) as directly teaching that the summer solstice once took place in Phalgant. Against this conclusion also Prof. A. Weber has already entered a protest (Ved. Beit. p. 33); not, however, on the grounds on which I disagree with Prof. Jacobi. I, for my part, have no doubt that 'aghásu hanyante gávo'rjunyoh pary uhyate' means 'the cows are killed (when the moon is) in Maghâs; the marriage procession goes round (when the moon is) in Phalgani, i. e., the preparatory ceremonies take place in the last month of the old year, in Mägha, about the time of the winter solstice; the wedding itself takes place when the moon is full in Phalgani, i. e., at the beginning of the new year (the Phâlgani-fullmoon, as explained above, marking the beginning of spring). Wherever, in the Brákmanas and Sátras, something is simply said to take place in a certain nakshatra, the time meant is when the moon is either full in, or else simply in conjunction with, that nakshatra.

Professor Jacobi next refers to the different dates given in the Gritya-sitras for the beginning of the study of the Véla. This is generally connected with the beginning of the rainy season. Now, one Grihya-sitra specifies, as the appropriate date, the full-moon of Śrâvaṇa, and another — with which moreover a statement in the Râmâyaṇa agrees — the full-moon of Bhâdrapada. These two determinations Prof. Jacobi supposes to have been made at the times when the summer solstice, which marks the beginning of the rainy season, coincided with full moon in Śravaṇa and Bhâdrapadâ, respectively, i. s., about 2,000 and 4,000 R. C. The latter determination would thus belong to the same period when the summer solstice was

^{*} An interpretation virtually identical with the one given above has already been proposed by Prof. Max Müller, Preface to Vol. IV. of the Riguelda Samhitá, p. lavii.

observed to take place in Phalguni. But these conclusions, if not supported by ample collateral evidence, are altogether precarious. With regard to the rule that study is to begin at Sravana full moon, I remark that that full moon marks the beginning of the rainy season for those who reckoned their first four-monthly period from Chaitri-fullmoon. And that the members of certain schools began their studies another month later, may have been due to local causes connected with the climate of the place, or other circumstances which we cannot now ascertain. I certainly can see no sufficient reason for seeing in this isolated rule of some trinhya-sūtras a reminiscence of a period as remote as 4000 B. C., and would rather have recourse to any explanation than this.

When remarking, above, that in Vedic literature the equinoxes are never mentioned and that hence in our chronological speculations we are not warranted in referring to them as probable starting points of the Vedic year, I said that I should revert later on to the fact of Krittikas heading the oldest lists of the nakshatras. This fact has, it is well known, been generally understood to imply a recognition of the vernal equinox once having lain in Krittikas. I, however, must state that for my part I have never been able to see anything like a valid reason for this conclusion. What has led to its universal adoption is, of course, the involuntary comparison of the older lists beginning with Krittikas with the later ones beginning with Aśvini. That Aśvini was made to head the series is doubtless due to the fact that, at the time when the system of Indian astronomy was cast into its modern shape, the beginning of Asvini coincided with the vernal equinox. But the importance then attached to a beginning with the vernal equinox was entirely due to foreign, Greek, influence, and the inference that, because the new list takes its departure from the equinox, the old one did so likewise is, if in a certain sense natural, yet without any sound foundation. Longitudes - or what may be considered as the equivalent of longitudes - were, as far as our information goes, measured in the pre-Hellenic period of Indian astronomy from the points of the solstices only; whether from the winter solstice, as in the Jyôtisha Véddinga, or from the summer-solstice, as in the Súrvaprajuapti of the Jainas. And further, we have seen above that, in the period of the Brahmanas at any rate, the equinoxes appear not to have been considered at all in connection with the seasons; the spring of the Brahmanas begins midway between the winter solstice and the vernal equinox.

Professor Tilak indeed, in his second chapter, argues that there are distinct traces of the oldest Indian year having been one beginning with the vernal equinox. His first argument is that the term 'vishuvat' means originally 'the day when night and day are equal'; that hence the central vishuvat-day of the year-sacrifices, such as the gavām-ayana, must have been one of the equinoxes, and hence the sacrifice must have begun at the other equinox: whence we may conclude that that equinox was viewed as the beginning of the year. But there is no authority for Tilak's interpretation of the word vishuvat, which rather seems to mean 'that which belongs to both sides equally,' 'that which occupies the middle;' so that the vishuvat-day is simply the central day of the sacrifice, wherever that day may fall. The Brāhmanas seem not to leave any doubt that this central day was originally meant to coincide with the summer solstice; while subsequently, when the beginning of the sacrifice had been moved forward to the beginning of spring, it, of course, coincided with — about — the beginning of October. Later on only, in the technical language of astronomy, the term came to denote the equinoctial day.

Nor can I follow Prof. Tilak in his attempt to establish for the terms 'uttarayana' and 'dakshinayana' new meanings, according to which they would denote, not the periods during which the sun moves towards the north and towards the south, i. e., the periods intervening between the solstices (in which sense the two terms have hitherto been understood exclusively), but the terms during which the sun 'is towards the north or south' respectively, i. e., the terms intervening between the equinoxes when the sun is either to the north or to the south of the equator. These latter meanings might perhaps be assigned to the two words on etymological grounds, but in the whole of existing Sanskrit literature, from the oldest books downwards,

The state of the s uttarayana and dakshinayana actually denote nothing but the periods during which the sun proceeds either northwards or southwards. The passages quoted by Prof. Tilak from the Upanishads couple the uttarayana with the light half of the month, the dakshinayana with its dark half, for the obvious reason that, as in the light half the light of the moon increases until it reaches a maximum, and decreases in the dark half until a minimum is arrived at, so in the uttardyana the sun daily rises higher, gains in heat and might, and finally attains his highest place and heat, while in the dakshinayana the opposite process is passed through. The identification of the uttaráyana and dakshináyana with the devayana and pitriyana of the Samhitás has nothing to rest on. Nor can the passage of the Satanatha Brahmana, which allots to the gods the seasons Spring, Summer and Rains, and to the fathers the three remaining seasons, and after that says that the sun is among the gods when he turns to the north, and among the fathers when he turns to the south, be used to prove the identity of the uttarayana with the period from vernal equinox to autumnal equinox; and of the dakshinayana with the remaining part of the year. For in the first place the spring of the Prahmanas begins, as we have seen, not with the vernal equinox, but at the point lying midway between winter solstice and equinox. And in the second place an explanation, which might possibly be applied to the term uttaráyana, viz., that it denotes the time when the sun is moving in the northern region, not towards the north, really becomes altogether impossible when we have to do with expressions, like 'udaa avarttate, which clearly refer to the sun as 'turning' or 'returning' northwards. The sun 'turns' or 'returns' only at the solstice, not at the equinoxes. The two clauses of the Satapatha passage do not fully agree, because they really refer to two different ways of subdividing the year. The ayanas are reckoned from the solstices; the seasons from the point lying midway between winter solstice and vernal equinox. If, therefore, the intention was to assign to the gods as well as to the fathers three entire seasons - without cutting up two seasons into halves - the allotment of a small part of the dakshinayana to the gods and a small part of the uttaráyana to the fathers could not be avoided.

As thus there is no trace of a year reckoned from the equinox in the Brahmana period. there hardly seems a good reason for connecting the position of Krittikas at the head of the old lists of the nakshatras with the vernal equinox. According to the system of the Brahmanas - which, as we have seen, is reflected in the Jyotiska Védánga - the vernal equinox falls at 10° of Bharan, i. e., close to Krittikas, and the latter constellation might, therefore, even then have been viewed as roughly marking the equinox. But, as the latter point or day is manifestly of no importance in the order of the year recognised in the Brahmanas, I, for my part, am unwilling to accept this interpretation of the position of Krittikas. It, is, of course, not impossible that the old lists of the nakshatras may really come down from the time when Krittikas marked the place of the vernal equinox, not only approximately, but accurately, i. e., about 2300 B. C. Only we must clearly realize that, in that case, astronomical views must be supposed to have prevailed at that time, which greatly differed from those of the Brühmana-period; i. e., that people then must have looked on the vernal equinox as really marking the beginning of the year. That this was so is not impossible; but it has to be kept in view that it is an hypothesis not directly countenanced by anything in Vedic literature. And, as may be repeated here, the fact, that the leading asterism of later times, viz., Asvini, owed its position to its connexion with the equinox, proves, in no way, that the ancient position of Krittikas was due to an analogous cause.

We thus arrive at the final conclusion that none of the astronomical data which so far have been traced in Vedic literature in any way compel, or even warrant us, to go back higher than the time when, as the Jyôtisha Vedanga explicitly states, the winter-solstice took place in Sravishthas. To the decision of the question at what exact period that coincidence occurred I have not for the present anything to add. The difficulties besetting this problem have, on different occasions, been fully and convincingly stated by the late Prof. Whitney, who arrived at the conclusion that, if all sources of possible error are taken into joint

consideration, 'a thousand years would not be too long a period to cover all the uncertainties involved.'s He, with full justice I think, lays special stress on the fact that there is absolutely no proof of the old boundary lines of the nakshatras having been the same as those acknowledged in later Hindu astronomy, and of the insignificant star, & Piscium, having from the beginning marked the eastern limit of Revati;10 and that hence in all our backward calculations we have no reliable point to start from. Where on the ecliptic is the beginning of Śravishthás. in which according to the Veddinga, the sun is when turning towards the north? The constellation Sravishthas has a considerable northern latitude, and the sun, therefore, can never actually be in the consellation, nor can the heliacal rising of the constellation indicate the place of the sun in the ecliptic to those who do not possess a very advanced astronomical and mathematical knowledge. The Jyotisha Védúnga (v. 6) says that the yuqa begins when sun and moon ascend the sky together with Sravishthas; which certainly seems to mean that the sun at the beginning of the yuga rises together with the constellation Śravishthās: analogously Garga - as quoted by Somâkara - teaches that the uttarayana begins when sun and moon rise together with Sravishthas. At the same time those two authorities clearly mean to say that, at the beginning of the yuqu, the sun is at the beginning of that subdivision of his path, which is called Sravishthas after the constellation That when the sun is at the first point of that subdivision it does not rise together with the constellation - owing to the northern latitude of the latter - they are evidently quite unaware of. Where, under these circumstances, is the fixed point which we require to star from in our calculations? Professor B. G. Tilak (in his third chapter) contends that it is more natural to suppose that in the earliest days of civilization the motions of the sun and the moon were determined with reference to known fixed stars, rather than to artificial subdivisions of the zodiac. This is no doubt true; but in Indian literature there appears to be from the very beginning a most confusing mixing up of constellations and divisions of ecliptic Artificial systems, like that represented by the Jyotisha Védánga, appear to have been estab lished very early: I have no doubt that at the time, when the author of the 19th book of the Kaushitaki Brahmana could say that the sun always turns towards the north on the new moon of Magha, there already existed a fully worked out calendaric scheme, most probably very similar to that of the Védáiga. It appears probable that such a scheme was known at the time already when the months first received their names from the nakshatras in which the moon was full. We must here clearly distinguish between minuteness and accuracy of astronomical observation on the one hand, and of arithmetical calculation on the other hand. The former cannot be presupposed for an early period - they, in fact, never existed in India: but there stands nothing in the way of our admitting that the Hindus at a very early period already were capable of devising a, purely theoretical, subdivision of the sun's and moon's path into twenty-seven equal parts, and accurately calculating the places occupied in those parts by the two heavenly bodies in all seasons and months of the year. There is no valid reason, in fact, to deny that what is actually done in the Juotiska Veddinga and the Surva Prainapti of the Jainas could be done at a much earlier period already. Each artificial scheme of that type. of course, requires, at least, one observation which provides a starting point for all calculations; such as the place of the winter solstice in the Védúnga and of the summer solstice in the Súrya Prajuapti. But what that original observation really was in each case is a matter of doubt. The system of the Lyotisha Véláuga, e.g., is probably based on some observation however imperfectly made, of the place of the winter solstice; but it is, at any rate, not impossible that something else was originally observed, e. g., the place of the summer solstice and that the corresponding winter solstice was thence calculated according to the general principles of the system.

^{*} Whitney, the Lunar Zodiac, p. 384.

¹⁸ Compare on this point the introduction to my and Pd;. Sudhikara Dvivedi's Edition of the Pañchasiddhántika, ; p. liz.

I wish to add a few words regarding a question repeatedly touched upon in Prof. Tilak's book, and naturally presenting itself in the course of all enquiries into ancient Hindu astronomy and chronology, viz., the question of what accuracy of observation the early Hindus may be supposed to have been capable. That observation was at no period a strong point of Hindu astronomers is at present disputed by nobody; we need only remember that even after the Hindus had reached a comparatively high stage of theoretical astronomical knowledge and probably cultivated systematic observation to some degree, they yet appreciated its importance so imperfectly as to leave no direct record of what they did: astronomers tacitly corrected the astronomical elements they had received from their predecessors, but did not state what the observations were that appeared to call for those corrections. And how imperfect the observations were by which they attempted to define the longitudes of the junction-stars of the nakshatras. clearly appears from the results, as stated in the Suddhantas. As regards the older period, anterior to that of the Siddhantas, it is very difficult to admit anything like even approximative correctness of observation. We may here limit our reflections to the only class of observation which, as far as we can judge, was then actually practised to some extent, i. e., that of the places of the solstices. If we wish to ascertain the place in the ecliptic at which the sun is at the winter solstice, or, to put the problem in a less abstract way, the star or constellation in or near which the sun is at that time, we, of course, must first ascertain on what day the winter solstice takes place. Now, this may be done either by observing on what day the sun rises and sets furthest to the south; or else by observing on what day the shadow cast by some pole or gnomon at noon is longest. Both these observations, however, have their difficulties, and anything like an even approximately accurate result can be arrived at only by the observations being repeated for a number of years. This, of course, if done with method and perseverance, will gradually lead to an approximately correct evaluation of the length of the year: which in this way will be found to consist of about 365 days. Observations continued for a number of years - Biot considers that a period of twenty years would have amply sufficed for the purpose will shew that 365 days are not sufficient to bring back the phenomena of the shortest shadow as noon and the greatest southern amplitude of the sun, and will teach that another quarter of a day has to be added to the length of the year.

What here immediately concerns us is the recognition of the fact that anything, like a fairly accurate fixation of the sun's place among the stars at the winter solstice, cannot be imagined to have been accomplished by people who had no approximately correct notion of the length of the year; the knowledge of the one cannot be separated from that of the other. Now, what length was attributed to the year in the Vedic period we do not directly know; for the ever-recurring statement as to the year having 360 days can hardly represent the entire knowledge of the Hindus of that time, and, moreover, there are positive indications of some system of intercalation (the 13th month, etc.), which no doubt improved matters to some extent But in the next following period — represented by the Jyotisha Védánga, Garga, etc., — we have most definite and circumstantial information as to the recognition of a solar year of 366 days, $i.\ e$, of a year three quarters of a day in fault. No clause, providing for a periodical correction of this fault, has been traced either in the Jyotisha Voldinga or any cognate work; the need of such a correction was evidently not perceived, or certainly not regarded, for centuries. Now, it would hardly recommend itself to ascribe to the Hindus of the Vedic period a more accurate knowledge of the length of the year than to their successors, and we, therefore, must assume, however unwillingly, that they also, at the best, valued the solar year at 366 days. But with what accuracy, we must ask, can solstices be observed by men who were so egregiously mistaken about the length of the year? At the end of one yuga of five years already, an observer, following the principles of the Veddinga, would have looked out for the sun's place at the winter-solstice about four days too late, and would consequently - if we suppose him to have been capable of determining the sun's place at any given time with full accuracy have located the solstice about four degrees east of its real place. How any civilized nation, interested in the maintenance of an orderly calendar, could, for any length of time, put up with the scheme based on the hypothesis of the quinquennial yuga is altogether incomprehensible. Probably there took place from time to time violent reforms of the calendar, imperiously necessitated by glaring discrepancies between the results of the received theory and the actual state of things. But that in the pre-Hellenic period there was anything like a methodical correction of received chronometrical and astronomical theories, such as results from continued methodical observation, we have no right to assume. When Varaha Mihira, in the sixth century of the Christian era, undertook to give a survey of the different Hindu systems of astronomy, he appears to have had before kimself works of two different descriptions only such as were manifestly based on Greek science, and such as were in all essential features not superior to the Justisha Védánga. And when we note that he manifestly was acquainted only with two positions of the summer solstice, - viz., the one belonging to his own period and the old traditional one recorded in the Vēlānga, and that hence evidently there existed no record of an analogous observation from the whole period intervening between those two observations (a period of, let us say, 1700 years), we shall feel neither inclined to form a high opinion of the skill of the people who made the earlier observation, nor to believe that that observation was preceded by a series of older analogous observations, and that records of these are embodied in ancient Hindu literature.

Postscript.

This paper was nearly finished when I became acquainted with Prof. Bühler's 'Note on Prof. Jacobi's Age of the Veda and on Prof. Tilak's Orion,' published in the Indian Antiquary, September 1894, and, also, through Major R. C. Temple's courtesy, with the late Prof. Whitney's paper 'On Jacobi and Tilak on the age of the Veda,' printed in the Proceedings of the American Oriental Society for March 1894. The latter paper, with whose conclusions I agree, does not call for any remark on my part. To much of what Prof. Bühler remarks my own paper contains a reply. I do not in general wish to contest what Prof. Bühler says about the probability of Vedic culture and literature reaching back to a more remote past than has hitherto been generally assumed. But I must adhere to my contention that — with the possible exception of Krittikas heading the old list of the nakshatras — no astronomical datum has, so far, been pointed out in Vedic literature which leads back further than the period when the winter-solstice was in Sravishthas.

NARSINH MEHETANUN MAMERUN.

A POEM BY PREMANAND, TRANSLATED FROM THE GUJARATI WITH NOTES,

BY Mrs. P. J. KABRAJI (Née PUTLIBAI D. H. WADIA).

(Continued from n. 81.)

Canto IV.

THE priest Khôkhalô placed the letter in Mêhêtûjî's hand,

120 Who, on reading the good tidings called upon the Lord of Vaikunth:-

"Maternity gifts are expected from me for my daughter and I have not so much as a false coin in my house.

⁴⁰Trikamjî, may you remain in readiness, for much gold will be required (on this occasion)." Feeding the priest and giving him alms, the Mêhêtâ fell at his feet.

And said:—" We shall come with the gifts," and dismissed him.

125 Then Narsinh Mêhêtâ sent for his Vêrâgî50 friends and relatives and (said to them):—

"We have to carry gifts (for her relatives), as Kunvarbaî expects her simant."

(So they prepared) a broken carriage, with the yokes all bent and the spokes and tyres all broken.

The poles and spokes belonged to one person; of another they borrowed a pair of bullocks. And so the Méhétájí went forth, after invoking the aid of Jagdíšají.⁵¹

⁴⁹ An epithet of Krishna.

⁵⁴ Ascetica.

⁵¹ The Lord of the Universe, being a title of Krishna.

130 Three female friends were with them, and they made some ten or twenty Veragis in all. In a little closed box of copper they carried the image of Balmukandil, 52

And each one wore the image of Danidar, hanging from a string at his neck.

A bag was slung at the back of the cart, in which they carried the musical instruments, And (also) a load of gopichuidan,53 and tuluis-leaves and sacred fuel.

135 Tilak and tulasi-leaves and strings of beads comprised all they had in the shape of gifts. (But) Narsinh had little fear, (for) he knew that Gopaliis was responsible for the consequences!

But how can such feeble bullocks pull (such a load)?

So the Vaisnavas pushed with all their might over the steep roads, loadly crying "Jai, Jai, 55 Lord of Vaikuith:"

Till one of the bullocks sank down from exhaustion, while the other pulled with all his

140 At which the Vêrâgîs would wring the tail of the prostrate animal and do other such curious things.

(Though) all the joints of the carriage were loose and crooked, and the carriage leaned to

And the poles and axles creaked sonorously,

The Vaisnavas would now jump down and now mount again with the name of Ram-Krishna⁵⁶ on their lips.

Towards noon the Mêhêtûjî reached his destination, and all the town turned out to see (him).

145 What do the people of Vishyapûr know of the splendour of the Vaisnavas? (Some remarked) "Kunvarvahu's wishes are fully gratified; the gifts are in cash.57

Refrain.

The Mêhtâjî has brought the gifts in cash. Look what the Vaisnavas have with them. Let them distribute just one necklace of beads to each, and the whole community will be decorated !"

Canto V.

When Śrirang Mêheta heard (of the arrival) he came forth in haste: and both the réváis met with affection.

150 Also the son-in-law and his brother came out to meet him, and all the household came out

But they all laughed at the equipage of the Mêhêtâ and greeted him but coldly.

They gave him a house to put up in, where fleas and mosquitoes had made their dwelling :-

A quaint old place with an uneven floor, the tiles of the roof being conspicuous by their absence.

The thatch all rotten, and the beams all broken, and the walls bent double.

155 Such a house the Mêhêtâ had to live in amongst numberless fleas and bugs.

After the vévái had left his guest in this place and departed, the Nagars laughed and said (ironically):--

"Here is Kunvavahu's Vaisnava father, let us look on his face and be purged of our sins." And so (also) with laughter and merriment the fair ones from each house went forth to see the Mêhêtâ.

They would make a false show of respect towards the Mêhêtâ; they would bow their heads and say :-- "It is well that you are come."

160 And would then whisper amongst themselves: - "To have seen the Mêhêtâ is to have seen Hari himself.

Look what beautiful companions he has brought with him; surely the great god is gracious to him."

"Kunvarvahu's days of grief are over now," they would say, and turn their faces (in scorn).

"Look at the bullocks of the Mêhêtâjî, and what a noise the gnats make (about them)!

Here is a bag hanging behind the cart and pairs of cymbals are slung together.

And here is a bundle of tulasi and some sacred fuel: what more is wanted?

165 He will place these in a basket and stand blowing into his conch-shell:

While the Vêrâgîs will chant the praises of Hari, which will finish the ceremonial." Thus the Nûgar women ridiculed the Mêhêtâ.

On Kunvarban being informed that her father had arrived with the gifts,

She ran forward to meet him, when her sister-in-law laughed disparagingly and said: -170 "Is this called a father's love for his daughter? Why is he come to subject her to ridicule? He brings disgrace on the names of seven generations of (his) ancestors (by his conduct).

I wonder why he wants those Vêrâgis in his train!

And are you (Kunvarbai) going by yourself to meet him? Better to be fatherless than have such a father!"

Hearing these harsh words Kunvarban turned back and replied :-

"What an amount of arrogance is this, sister-in-law, to speak behind one's back!

175 Of course, that daughter is very lucky who has a rich father:

But will another's father be of use to me, even if he be a millionaire?

If my own poor father comes to greet me with one piece of cloth (only), it is worth all the gold of Mêrû to me.

You may speak whatever your heart desires, but I pray that this father may be spared to me." Saying these words of reproach to her sister-in-law, the daughter went to her father.

180 Seeing his daughter from a distance, the Mêhêtû called upon Harî in his heart.

The eyes of both were filled with tears, as both met with due respect.

Then the father placed his hand on her head and bidding her sit by him asked her a

"Kunvarban, tell me how you have been faring; do your (husband's) relatives regard you

Now that the happy occasion is come. Srl Harl will provide the gifts."

185 Kunvarbat said with emotion : - "You have not brought any gifts with you?

How shall we keep up our prestige before the Nagar community? Why have you come without any resources?

The poor man is considered worthless in this world; those who have no money are regarded with contempt.

A poor man counts for nothing; people do not even let him stand at their doors.

Even the cleverness of the poor man is mistaken for eccentricity.

190 What is worse than to be called a pauper in this world?

Neither do you work for your living, father, nor lay by anything from what you get (as alms). Think, father, how you will meet the demand that will be made on your resources on this occasion.

You have neither brought a pinch of kunku59 with you, nor a môd,60 nor strings,61

Nor any earthen pots,62 nor clothes.63 How empty-handed you have come!

195 How shall my honour be preserved, father? Why did I not die when my mother died? What is the world to the motherless? What is life without a mother?

The child who loves its mother also forfeits all claims of relationship on its father.

The father's love after the mother's death is as (cold and ineffectual as) the rays of the

As the calf struggles for existence after the cow is dead, or as the fish gasps when out of

200 Or as the doe feels when separated from the herd, so feels the daughter when left alone without her mother.

As food is unpalatable without salt, or dinner is disagreeable to him who has no appetite, Or as the eye is without the pupil, such is the father's heart (towards his child) in the

absence of its mother.

Why did you come, if only to excite ridicule, with fifty Vêrâgîs in your wake? Do conch shells and strings of beads and bells form the maternity gifts?

205 If you have nothing, father, better turn back," and so saying the daughter wept bitterly.

The Mêhêtâ placed his hand on her head and said : — "The Lord of Vaikunth will provide us with the maternity gifts.

Go and make a list of all the persons to whom these presents from us are due.

Write the names of all your husband's relatives, and do not forget a single article."

Hearing these words of the Mêhêtâjî, Kunvarbâî went to her mother-in-law (and said): -

210 "My father has sent me to you, to (ask you to) write on paper whatever is required."

But the mother-in-law turned her face in resentment and cried:- "Fruitless labour!64 What is the good of writing?

What more can he do than place the tulasi-leaf in a basket and stand blowing into his conch-shell?"

Refrain.

He will (only) stand blowing his shell; (it is) useless expecting a môsalan from Narsinh." Hearing this discourse between mother and daughter-in-law, the grandmother-in-laws put in sneeringly:-

> कडवुं ५ मुं. राग आसावरी.

150 मध्यो जनाइ जनाइनी भात मळ्यो सबकोना घरनी कपरे भेटी पाछां खरो जोड जोड सामगीने हसे. उत्तरवा घर आपूर्व एक झाझा चांचड मच्छर वसेक खाडा टेकरा वसमो ठाम उपर नळीआतं नहीं नाम.

Canto VI.

215 The grandmother-in-law, being a great personage, uttered these weighty words:—
"My eldest daughter-in-law, you shew your ignorance, the Mêhêtâ is a Vaiśnava.
And what does he lack who has friendship with Sâmal? 88
Ask for whatever presents you like, according to the customs of the Nâgars."
And giving paper to Kunvaryahu, she said: — "Put down, daughter, what I dictate.
220 Why should not our desires be indulged, even when the good vêvâî is at our door?
Write — 'five seers of kunku® will be required, and seven hundred cocoanuts: 70
And twenty man of well-shaped betelnuts, 71 for there will be a large assemblage:
Twenty-five suits of clothes (for men), each suit consisting of five pieces, and eighty webs of tôs, 72 daughter-in-law.

[#] See note 28.

^{*} A red powder used for marking the forehead on auspicious occasions.

^{70, 11} Coccanuts, betel-nuts, pan-leaves, etc., are distributed to the guests,

⁷³ A kind of cloth intervoven with silk and gold, or silver, threads,

Write, daughter, fifteen score of plaids, and fifty patil's :73

225 Some sixty silk-bordered cloths for men, and a hundred plain ones; and put down forty chirs,74 daughter.

And the Brahmans will want cotton dhôtis, so put their number at thirty score:

And write of gold embroidered silk sadis twelve score, daughter.

Put down the number of plain sadis at three hundred, and write of common printed sadis four hundred, daughter.

Then put down the number of sadis for home-wear at ten to twenty score: and write for sixteen score of ahats, daughter. 75

230 Mention just a hundred pieces of printed cotton stuff, and nine score of nats, 78 daughter.

And write for some fifty webs of masrû77 and gajiant and daridi.79

And mention a thousand or twelve hundred bodices: many people have expectations, daughter.

And say about sixteen hundred plaids, etc.; and as for the pin-leaves and the oil required, why should we put their figure?**

I have made but a rough estimate, for I know your father to be poor, daughter-in-law.

235 He may adorn you with all the sixteen ornaments, si if he likes to gratify your wishes, daughter.

And the son-in-law has a right to golden anklets, which if you provide, you will not be doing us a favour, daughter.

(And he has also a right to) one thousand gold coins, which I hesitate to mention:

For I am but an old woman and simply do my duty in dictating this list: I am not avaricious, you know, daughter-in-law.

If you supplement this list further you are welcome to do so, for you will only add to the honour of your house, daughter."

240 At this the sister-in-law turned her face sneeringly and muttered:— "Our purpose is surely gained!

Why not write for a couple of large black stones? The Mêhêtâ will be better able to provide them!"

Says the old woman: — "Why do ye make such a noise? Surely, there is no harm in writing!"

Refrain.

"Why should we not write what we like?" says the hard-hearted grandmother-in-law. But Kunvarbâî feels anxious and cries within herself:— "What shall we do, Gôpâl?" (To be continued.)

कडवुं ६ डुं.

DESCRIPTIVE CATALOGUE OF OBJECTS MADE AND USED BY THE NATIVES OF THE NICOBAR ISLANDS.

BY E. H. MAN, C.I.E.

(Continued from p. 49.)

9. Articles of Bamboo and Cane.

- 65 (m). Kentöt (Car Nic. Hurat). Bamboo fire-sticks, generally used at the Northern Islands. A small piece of bamboo is split in half longitudinally; one half is placed on the ground, convex-side uppermost, with some dry cocoanut-fibre in the hollow space beneath to serve as tinder; the other half is then applied edgewise and crosswise like a saw, but as rapidly as possible. In a short time the notch produced by the operation is so deep as to allow of the powdery ashes falling through on to the tinder below when, by instantly blowing on the latter for a few seconds, it gradually ignites. No practice or skill is needed to succeed at the first attempt with this implement.
- 66 (...). Kenchwania. Bamboo, or light wooden, stilts, used on the west coast of Camorta Island in crossing a muddy foreshore at low water.
- 67 (m). Orang. Bamboo receptacle for holding tobacco or cigarettes. Used at Car Nicobar.
- 68 (m). Kenlünga-karau or Kenhöna-karau. Bamboo receptacle for holding spare iron-barbed-prongs to replace those in their mian spears (vide Nos. 17 to 21), which they may happen to break.
- 69 (m). Noang-shun (C. N. Chuk-nama). Bamboo receptacle, containing shell-lime for the use of betel-chewers. These articles are usually sold in pairs (tak-shun), or in sets of four (amok-shun). Shell-lime is made at Car Nicobar, Katchal, and portions of Camorta, Nancowry, and Southern Group. Its manufacture is tabued in the remaining localities.
- 70 (m Hannös-heöe or Fannös-heöe (C. N. Fans-kuata-möiya). Short bamboo blow-y j). pipes to serve the purpose of bellows. The mouth is applied to the larger orifice, so that, by blowing into the tube, a strong current of air is produced through the small hole in the node at the other end.
- 71 (m). Henden. Bamboo atensil, used in tapping tari from the cocoanut spadia. Is usually employed in the Southern Group (vide No. 34).

- 72 (m). Kenhom. Bamboo ntensil, taken up the coccanut-tree to receive the contents of the henden (vide No. 71), or henwain (vide No. 34).
- of bamboo a small vent-hole is made in the centre of the node, and the node at the other end is removed; the mouth thus formed being then covered with a small piece of cocoanut ochrea (vide Nos. 36, 37, 45 and 46). In fitting a drinking-cup from a bowl of tari, as drawn from the tree, this bamboo object is placed in the bowl and, after a few seconds, the thumb is pressed on the small vent-hole at the upper end: the bamboo thus loaded is transferred to the cup, where its contents, duly filtered, are discharged by removing the thumb from the vent-hole. Another method of filling this utensil, when the bowl is nearly empty, is to apply the mouth to the vent-hole and draw in the breath and, then, when filled as far as possible, the thumb is applied to the vent-hole, as above described. Sometimes the upper node is also removed, in which case the cup is filled by pouring unstrained tari through the shanother.
- 74 (m). Tanop-toak (C. N. Kiran-nga-hão). Bamboo drinking-vessel provided with a tube for sucking tári, in constant use among the middle-aged and old men of Chowra, Teressa, and Car Nicobar, especially of the first named. It is not used in the Central and Southern Groups, where tári is drunk with the enfa (vide No. 38), or a glass, or by pouring direct from the shanônha (vide No. 73) into the month through the small vent-hole in that utensil.
- 75 (m). Lanòh-hiyä (C. N. Sanòng-sas). Betel-nut crusher, the barrel of which is of bamboo; used by those who have few or no teeth. Similar objects, made of brase, are sometimes obtained from ship traders.
- 76 (m). Henhel (C. N. Fa-nā). Bamboo flageolet, similar to those in use among the Burmese; generally about 18 inches long. A flat circular piece of beeswax about the size of a four-anna piece, but thicker, is inserted in the tube, and is fixed in the

middle of the oblong incision, marked A in the sketch, where it serves as the block of the instrument. Over the upper half of this incision a piece of leaf (generally of the Amonum Fenzlii), or paper, is loosely wrapped. These measures serve to regulate the tone of the instrument, which is provided with 7 finger holes and one thumb hole. the latter being on the reverse side, and at a level corresponding with the space between the top and second finger holes. The scale is arbitrary, and between the Burmese and the European. In construction it resembles the metal flue pipe of an organ. Some four or five tunes only are known, and these are borrowed from the Malays. The tone is liquid and clear. The henhel is not made at Car Nicobar, where only a few, obtained from Chowra, are owned by those who have learnt to play on it. In the long-established villages in the Central Group, where there are cemeteries, this instrument can be played only at the special feast known as Et-kait-fil, when it accompanies a danang (vide No. 77). It can be played at any time at any village where there is no cemetery, provided no mourners are present: at these villages only can it be played as an accompaniment to dancing and singing. A few persons are able to play this instrument through one or other of the nostrils and more especially is this done on the occasion of the Et-kait-hi festival, when the performer

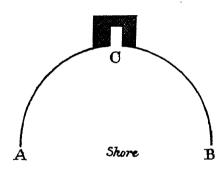

usually perches himself on one of the derricks, 20 to 40 feet high (styled henkonshs), which are constructed for the purpose of raising the lefty pole to a vertical position.

- 77 (m). Danang. Bamboo lyre, the string of which is generally made of a variety of cane, locally known as palai. In order to improve the tone of the instrument, holes are made through the under portion of the bamboo cylinder. Used at the Et-kait-ñi memorial-feast and can be played only at a distance from a cemetery, and when no sick persons or mourners are present.
- 77a. (m). Dranang. Car Nicobar lyre. These are smaller than the last-named, and are generally made of wood.
- 78 (m). Ichē (C. N. Hara-nang). Ear-stick ornament, usually made of a variety of cane called palai, very commonly worn by both sexes at most of the islands, after the manner of the Burmese. These objects are sometimes hollowed and filled with dammar on account of its agreeable odour, or with tobacco. The silver facet consists generally of a four-anna piece, the surface of which has been rubbed smooth on a stone. This is styled calmat-ichē, i. e., the "eye of the ichē." The Car Nicobar ear-stick is usually small and neatly-made. When not in use, a plug of cloth, rolled leaf, etc., is often inserted in the perforated ear-lobe.
- 78a.(m). Ichē Shom-pen. A large variety of ear-stick, made of bamboo or light wood and about 5 inches in circumference, worn by the Shom-pen.
- 79 (m). Toaps or Niams (C. N. Toaps). Cane tongs, used for lifting a piece of burning wood or hot iron off a fire.
- 80 (f). Haat. Open basket, made and used at Car Nicobar, for holding chewing and smoking materials.
- 81 (f). Hokehok. Cane basket made in the Southern Group for containing betel, lime, and chavica leaves. As the workmanship excels anything of the kind attempted in the Central Group, the natives of the latter purchase them for use on their feast days, in preference to their own spathe boxes (vide No. 54).
- 82 (m). Wan. Hanging baskets of cane, used in the Southern Group for holding pots plates, etc., and being gradually adopted in the Central Group.
- 83 (f). Chūkai (C. N. Paiyāh). Cane basket, used in the Central and Southern Groups for carrying food, etc., when on a journey, or in a cance. The larger variety is madé in the Southern Group, where the natives are more skilful at cane-work.
- 84 (m Hentain (C. N. Kowôka). Cane basket, made and used by women for bringing & f). produce from their gardens to the village. A stick is passed through the cane or cord loop, when carrying the basket over the shoulder (vide No. 163).
- 85 (m Kan-shōla (C. N. Til-kön-haiyam). Basket, made sometimes of cane, but generally \$f). of the bark of a certain small tree, called Afū (? Maranta dichotoma); used for carrying fowls.
- 86 (m. Henlon-mong. (Teressa, Hangia). Basket for holding small fish speared along & f). the foreshore, or in shallow water.
- 87 (m). Hilla-ok-not. Tray-shaped cane basket, made and used in the Southern Group, for conveying a pig from one village to another. In the Central Group a cocoanut frond, and at Car Nicobar an Areca spathe, is used for the purpose.
- 88 (f). Kenshiwa-shun (C. N. Kenchang-nama). Fine cane-basket, used as a sieve when preparing shell-lime.
- 88 a. (f). Kenshiwa-shun Shom-pen. A somewhat similar basket, made by the Shom-pen for sale to the coast natives.
- 89 (m). Kenshech (C. N. Kunhial kok). Prickly stem-sheath of long ground rattan (Calamus sp.), used chiefly by women for rasping the kernel of the cocoanut, and Cycas Rumphii.

- 90 (m). Tinloata. Knotted cane-strip, employed in the Central and Southern Groups for the purpose of intimating to friends at other villages when a memorial-feast is to be held. Also when proceeding on a distant journey, in order to intimate the probable date of return, a tinloata is left with friends. As each knot denotes a day, one is in every case unravelled each succeeding morning. As the knots are arranged in pairs, a tinloata with seven double knots and one single one would indicate 15 days. Owing to the comparative proximity of all the villages at Car Nicobar to each other, and the facilities for intercommunication, information in such matters is there conveyed by word of mouth.
- 91 (m). Lenkòk-ngoât (C. N. Linkal-kok). Cane (or bamboo) tally-strips, usud in denoting how many scores of cocoanuts have been promised, or have been already supplied to ship-traders, in exchange for goods advanced by the latter. As the Nicobarese system of numeration is the vigesimal, each nick denotes "ten pairs" of nuts.
- 92 (m). Chuk-panue. Cane-basket, used for holding the ball of twine, when hock-fishing; or the harpoon-line, when spearing large fish.
- 93 (m). Noama (C. N. Sanong). Cane fish-trap: placed on the forc-shore with its mouth towards the shore. Stones are placed on the under-lip, and along the sides, in order both to fix it in position and to conceal the cane-work; thereby averting suspicion as to its object. Except at Car Nicobar, where it is used during the dry season and at neap tides, it is employed during the rains only and at spring tides. The practice is to trail through the water a basket in which a quantity of scrapings of the large seeds of the Barringtonia Asiatica have been placed. This has the effect of blinding the fish which happen to be near the spot, and they are consequently more easily driven towards the trap, which has been set for them.
- 93 a. (m). Noama-chafoin. This somewhat resembles the last, but is smaller and is used for catching sardines by hand in shallow water.
- 94 (m). Kenhôn (with float, Pāha). Fish-trap, made of split-cane, or of the bark of a tree called Afū (? Maranta dichotoma). The month is first made, then the top, sides, and bottom in succession. For bait, unripe cocoanut-fruit is smeared on the inner side of the lip, and the trap, weighted with stones, is placed on the foreshore. The float, at high-water, indicates the position of the trap, and enables the owner to lift it suddenly before the fish, which may be inside, can escape. For this purpose, and if the water be sufficiently calm, he remains above in his cance watching, in order that, before all the bait has been consumed, he may lift the trap out of the water at a time when there will be the best possible catch. Custom permits of the use of this trap during the rainy season only, and exclusively at certain villages in and near Nancowry Harbour.
- 95 (m). Enyūn (C. N. Ta-rüe (large) and Tamātu (small)). Cane fish-trap, placed where there is sufficient water at low-tide to cover it. It is usually examined every alternate day. In order to avert suspicion, stones are placed round the trap, except near the mouth which faces the shore, thereby concealing as much of the cane-work as possible. If, when required to be lifted, it should happen to be high-water, a hen-hēat (vide No. 133) is employed for the purpose. In the case of the large trap, custom requires that it be used only during the rains; the smaller variety can be employed all the year round. When used with the kanshang (vide No. 98), the enyūn is styled hoyā.
- 96 (f). Hannah-oal-nī (C. N. Fanöh-el-pāti). Broom for sweeping the hnt-floor. Made of young cane-leaves fixed on to a handle, which is often provided with a hook at the upper end for convenience of hanging to the cane frame-work of the hut.

10. Traps and Cages.

- 17. (nt). Henhēu (Ter. & Chew. Henyū; C. N. Sē or Chanôl). Net-trap, used only at Teressa, Bompoka. Chowra, and Car Nicobar, and during the rainy season only. When required for use, the curved sticks are turned so that they cross each other at right angles, the netting thereby forming a platform below them. The bait is set in the loop of twine, to which the weight is attached. The trap is suspended a little below the surface of the water by means of a cord held by the fisherman, who, leaning over the side of his canoe, watches for the approach of fish. When he detects one nibbling at the bait he promptly draws up the trap, if possible before the fish can escape. The principle somewhat resembles that of the kenhôn (vide No. 94), which is used at none of the islands where the henhēu is employed. This is the only object containing net-work made and used by the Nicobarese.
- (m Kan-shang (C. N. Tananga). Fish-weir, by means of which more fish are said to 3: f). be taken than by any other method of fishing in use among the Nicobarese. It is employed only during the dry season and at spring-tides. It is made at dead low-water by means of cocoanut-leaves, which are laid lengthwise in a large semi-circular form

on the fore-shore, the two ends, A and B (seesketch), being towards the shore. The lower halves of the leaves are weighted with stones so that, on the tide rising, the upper halves float points upwards, forming a seeming continuous fence from A to B. At quarter-flood, the fishermen, with women and children, arrive, armed with light pronged-spears, and stand outside the enclosed area, where they stab all the fish, which, imagining themselves hemmed in, swim along the inner side of the fence searching for a way of

escape. After remaining for an hour or so, — by which time, the tide having risen to too great a height, the fish can escape over the leaves, — the party leave and return at half-ebb, when a similar scene occurs. The fish, baffled by the appearance of the impenetrable fringe of leaves, the shouts of the crowd outside, and the constant thrusts of their spears by which many are transfixed, generally seek to escape at the points A and B, where several members of the party are posted ready to spear them in shallow water. Noama and enyun traps (vide Nos. 93, 95) are generally set in the enclosed area, and at the point C one of the latter is placed, by means of which many of the frightened fish are caught. These kan-shang are made off suitable points on the coast, most frequented by fish, and their size depends on the strength of the party.

- 99 (m). Hennyât (C. N. Nang-ah). Pig-cage, in which young wild pigs, which have been caught alive, are kept and fed, also such of the young domestic pigs as are neglected or ill-treated by the sows.
- 100 (m). Kenchūta or Chuk-not (C. N. Kenlonga). Large bamboo or wooden pig-cage, with partitions to contain a number of fat pigs selected for slaughter on a memorial feast day. They are placed in it for a few hours only, while the other preparations for the feast are being made.
- 101 (m). Ong-yianga-kamoe (C. N. Wang-ah). Fowl-cage. The outer compartments are uncovered for use by day, and the inner ones are covered in for the fowls by night

as a protection from pythons, which, without such pre-autions, would commit frequent depredations.

102 (m). Kandap-shichūa. Bird-trap: generally set for mainds. In setting it, the peg at the end of the stick is fixed in the hole provided for the purpose. On the bird alighting on the stick, it gives way and the lid falls. The captive is then transferred to the adjoining compartment, where it serves to decoy others to the trap, as soon as it is re-set.

11. Cooking Utensils and Articles connected with them.

- 103 (m). Teag or Deak. Cooking-utensil, made of the bark of a certain tree not yet identified: used only by the Shom Pen. These primitive utensils necessarily serve their purpose for a brief period only. The large specimens require several layers of bark, and the sides are forced out by sticks placed crosswise inside the vessel.
- 104 (f). Hanshoi (Chowra, Kariang; C. N. Taniyaya). Generic name for the various cooking-pots, which are made entirely at Chowra and by the women only.

The pots are of various sizes, as follows: -

			Across mouth.	
Kentaha-lama-ok Kentaha-lama-oal Hanshöi-lama-ok Hanshöi-lama-oal	•••	•••	27-28 inches 23-24 ,, 18-19 ,, 16-18 ,, 15-16	But few are made, as they can be used only on memorial-feast days, and then only by certain old persons. In common use for boiling pork,
Itāsha-lama-oal		•••	13-15 ,,	Pandanus, and Cycas.
Henpakngaich-lama-ok	•••		13-14 ,,	
Henpakngaich-lama-oal Panòkenlait-lama-ok			11-13 " 11-12 "	For boiling fowls and rice.
Panòkenlait-lama-oal	•••	•••	9-11 "	
Tafal	•••		3-4,	For boiling water and eggs.

Ornamental black stripes on the pots are produced by applying the inner portion of a strip of unripe cocoanut-husk over the surface of the pot at the end of the baking process, and while the pot is quite hot.

- 105 (f). Kochi-Tatät. A pot made at Chowra after the pattern of one imported from India. Tatät is the native name for Chowra.
- 106 (f). Kamintap. A set of 4 or 5 of the smallest of the pots (vis., those known as tafal, vide No. 104), being the way in which these are usually sold.
- 107 (f). Entans. A shallow round clay plate, on which the potter forms the pot. A circular piece of plantain-leaf is placed on the plate in order to prevent the clay from adhering to the latter during the operation.
- 108 (f). Osiawa. A ring, about 8 inches in diameter, made of coconut-leaf, which is placed under the entana (vide No. 107) during the operation of moulding a pot.
- 109 (f). Hiwat. A clay wheel-shaped object, which is placed on the bottom of the pot, when the latter is reversed for the operation of baking, the object being to keep the

burning faggots, that are placed erect round the pot, from touching it. The interior portion of the pot, which is raised a few inches off the ground by means of potsherds, is heated by burning cocoanut-shells and husks below it.

- 110 (f). Danun-kariang (lit., medicine-pot). A small flat piece of bamboo used in trimming the sides and the bottom of a newly-moulded pot, and in giving the finishing touches to it before setting it on one side to dry.
- 111 (f). Kenyūa-kōi-hańshöi. Flat leaf-cover, made of the leaves of the Macaranga tanarius; placed over the month of a pot when steaming Pandanus and Cycas paste, or vegetables. Above this cover is placed the kenòp-kōi-hańshöi (vide No. 61). At Car Nicobar loose leaves are employed.
- (m). Hetpat. Small wooden grating, placed inside a pot when steaming Pandanus or Cyras paste, and vegetables, in order to keep them a few inches above the water, which is boiling beneath. These have to be made of various sizes, in order to suit the pots for which they are intended. At Car Nicobar a rough grating of loose sticks is made to serve the like purpose. It forms a primitive reproduction of the principle in Warren's Cooking-pot.

(To be continued.)

NOTES AND QUERIES.

A VARIANT OF THE SCAPE-GOAT.

On Trisul, one of the highest peaks of the Himalayas, resides Durga, under the name of Manda Devi. and to propitiate her once in every three years the villagers north of the River Pindar (British Garhwall) assemble at her temple of Bhidani, a small uninteresting place situated in a hollow in the hills. Here also is a small lake, or rather pond, the water of which is used in the sacrifices, and has the usual property of cleansing the bathers in it from all sin for the time being. The pilgrims having assembled, prayers are offered up by the chief pujdri (priest) and 64 goats sacrificed, the heads and the four legs, or rather feet (as they are cut off from the knee), being set aside for the goddess, and rest taken by the villagers.

When the full ceremonies there have been completed, a goat is selected and blessed by the officiating priest, and then taken higher up the hill to a level field, a short distance below the Tristli mountain. A knife is then tied round its threat, and it is driven away towards Tristli, watched by the eagle eyes of the assembled people until it is lost sight of, to see if it goes straight to the mountain, because if it wanders from side to side the goddess is displeased, and the offering is not accepted. In such a case should any severe illness afflict any of the villages, or an unusually high death-rate occur amongst the flocks and herds, it is due to the displeasure of Nandá Dêvi.

G. DALEIEL in P. N. and Q. 1883.

TERMS FOR MARRIAGE RELATIONS AS TERMS OF ABUSE.

It is noticeable that such terms for marriage relations as susar, "father-in-law;" salā, "brother-in-law;" bahnot, "sister's husband;" and jawat, "son-in-law;" are also terms of abuse. Susar is, I believe, very commonly used in this way. The following proverb from the Nardak, or uplands between Thānēsar and Kaiṭhal (Karnāl district) affords an instance:—

Báhá hal, khoyá aql aur bal.

Hal baháké, lâyd mai, agli pichhli sdri dhail.

Mai déké, lázá ghás; ab kyűn karé, susré, jiwané ki 4s?

Ek din már líyá, pandrah din khá líyá; Na karén khéti, na bharén dhand.

"You who plough have lost your intellect and strength. After you plough you have to use the schaga," and so you lose everything (go entirely to the bad). You use the schaga and (employ your bullocks to) bring grass; and then, you low fellow, what hope have you of living? We kill one day and eat for fifteen: don't cultivate, and you will pay no revenue."

The last two lines of course describe the "gentlemanly" life of Nardak thieves. The use of these words, as terms of abuse, fits in with the notions as to marriage relationship propounded by MacLennan.

I [The slidge answers somewhat to our harrow. — ED.]

THE DEVIL WORSHIP OF THE TULUVAS.

FROM THE PAPERS OF THE LATE A. C. BURNELL.

(Continued from Vol. XXIII, page 193.)

BURNELL MSS. No. 14 - (continued).

ATTAVAR DAIYONGULU - (continued).

Sultan and Virappa Naikar, and we defeated it, and then I and my elder brother, together with our people rested at Baretimar in Yênûr. I went to sleep, with my head on my elder brother's leg, and when he saw that I slept, he escaped from me, and went away. I came here searching for him," said the younger brother.

Mudadêya heard the story and said to him: -- "You had better sit here, while I go in search for your elder brother."

He passed by Sômêsvar and went to Kanne Siri Kattê at Uddar, and when he arrived the elder brother was at Kanne Siri Kattê. Mudadêya went and visited him, and the elder brother said to him:—" What have you come for, Mudadêya?"

"I was in the habit of going from Kotara-sana to visit the god at Sômeśvar. While I was there to-day, I saw your younger brother, who, after visiting the god, sat on a rock at Uddar. I asked him whence he came and whither he was going, and he answered me that he had slept with his head on his elder brother's leg at Bâretimâr in Yênûr, and while he was in a deep sleep his brother had put down his head and gone away. When he got up and looked about, his brother was not there, and so he went in search of his elder brother. I told him he had better remain where he was, and that I would go in search of his elder brother." Thus said Mudadêya.

Then the elder brother said:—"It is in your power to make me and my brother sit on the same throne. Go you to my brother and call him here."

Thus did the elder brother ask Mudadêya to act, and, having heard the request, Mudadêya started from Kanne Siri Kaṭṭê and went to the younger brother, and told him that his elder brother was at Kanne Siri Kaṭṭê, and had requested him to go there. Then the younger brother and all his people started from Uddar, and reached Kanne Siri Kaṭṭê.

When he saw his brother, he grew angry.

"As you left me alone at Bâretimâr in Yênîr, I will not see your face," said the younger brother, and put his arrow to his bow.

Then Mudadeya came up to them and said: — "If you quarrel with each other, I shall return to my own country.

The elder brother heard this and said : - " Do not go to your country."

Then Mudadêya made the elder and the younger brother hold each other's hands, sitting at Kanne Siri Kaṭṭē.

Then the elder brother said: — "Such another mediator will not again be found among the Bhûtas. We want a matham in this country with your assistance."

Mudadêya entered into treaty with the people of seven villages and made them build a hut for the elder brother. A matham for the younger brother was also built. A flag was raised near the elder brother's hut, and a stand for lamps was raised near the younger brother's matham. Two cars for the two kings [brothers] were made, and in the following year a flag was raised, and a feast was held.

News of this feast reached one Paduma Settyal of the bidu at Jappu, and he went to Uddar from the bidu at Jappu. When he reached, the feast for the king was being performed. [The king] saw Paduma Settiyal arrive.

"It is well that you have come, Paduma Sêtiiyal," said he.

The Settival gave him areca-nut and flowers, and a ball of flowers. '[The king] followed Padama Settival: — indeed both the Bhûtas went with him, and spread disease at the bidu at Jappa. When the matter was looked up in the prasna-book, it was known that the Bhûtas had followed him. For this reason an assembly of the people was called by the Settival at the Attavar lidu. Having assembled they all went to Mudadeya's sanam at Attavar, and caused a man to be proceeded by Mudadeya.

Then Paduma Séttiyal said:—"I went to the feast at Uddar this year, where the Bhûta gave me dowers, and when I returned the two Bhûtas followed me, and spread disease. When this was looked up in the praina-book, it came to our knowledge that it was the Dêva's (Bhûta's) doing. So a matham is to be built in this village, to which your consent is required."

Then said Mudadeya: — "For those two kings I am an intercessor. This is a settlement made between me and them in days gone by at Kanne Siri Kattê. As they followed you, a manne m is to be built."

Thus said Mudadeya. So Paduma Setti together with the villagers built a matham, and then the Bhûtas entered the matham, and a feast is held there even to this day.

BURNELL MSS. No. 15.

THE STORY OF KOTI AND CHANNAYYA.1

Original in the Kanarese character. Translation according to Burnell's MSS. Original, text and translation, occupies leaves 168 to 230 of Burnell's MSS.

Translation.

There was a country where Billavars were born. In the kingdom where the Billavars were born, there was a powerful city. There was also a Brahma (Bhūta), who had been born, according to all the Sastras. There was an Âni Gangâ, a Mâni Gangâ, a Water Gangâ, a Milk Gangâ, a Curd Gangâ, a Salt Gangâ, a blood Gangû, a hot Kanchî in the north, and a cold Kanchî in Pâţâlam.

When this Brahma was being born, the inhabitants of the palaces of seven Kanchi-kadangas seemed to be thrown down, and night gave way to daylight. Brahma had on a wreath of silver flowers in a bunch on the left and a wreath of gold flowers in a bunch on the right. Kammulajje Brahma had silver threads on the left shoulder, and golden threads on the right. There were a silver umbrella with seven tops on his left, and a golden umbrella with nine tops on his right. There was a garland as long as a man, and a fan as long as a peacock's feather.

Kammulajje Brahmů's birth was according to all the Sústras. He had twelve attendants without legs, and twelve who had only trunks without heads. Twelve girls there were to wave the lamps of coral and to sprinkle pearls on his head, and twelve servants to fan him with whisks of flowers. The first sets of twelve and the second sets of twelve — altogether forty-eight — attended on Kammulajje Brahmå.

He who was born according to all the Sastras, had five nerves in his leg, a Mullukavêr god on his knees, a serpent on his middle, five serpents on his head, a diamond within his heart, fine diamonds of ten or sixteen sorts on his head, a figure of Bhima and Arjuna on his back, a Saskapâla on the left, and another Saskapâla on the right, and a manikam and stars on his head.

Next must be told the story of the heroes, the servants of this Brahmâ, who were born according to all the Sastras. And their names were these :— Woddu Paddala, Mara Kadamba,

² This is a version of the long story given in Vol. XXIII. p. 85 ff.

The second control of the second seco

Māra Murva, Adhikāri of Kokkadanda, Kori Murva, asteries of their for ref. Kēsana Purusa, Maha Purusa, Alinga Jatti, Ulinga Bermu, Narastnīga, Baidya of Handel, Mara Barna at Savandie, Tanda Giḍḍi, Paiyya Baidya at Palli Dēvērē Pergadē, and Dēvanāgarī Ballāl.

The birth and the death of the Edambur Baidyas could not be described even in seven days and eight nights. They had seven armies and seven lattles to fight. Kôti Nigrôni was the richest of all at Kôdi, and Buddyanda is the richest of all at the bids.

The birth and the death of the Édambûr Baidyas is to be told to-day. It happened in the Eastern Country. They were born in the country of Parimal, and their birth place was Panjana Bidu. They were educated at sixty-six schools.

"We have seen sixteen dynasties, but have given the description of three only. There was a female called Måbu Bannål in the Eastern Country, for our mother Deyi was there called Måbu Bannål. She was called Uppi Bannål in the Western Country. Our mother was Deyi; our father Kåntanna; our uncle Siyins. Our house was the Kånchikadanga Palace, called Gejje Nandanonda Aramané, on the high road. We are able to fight seven battles." said the heroes.

Six years and six months was the age of the Edambûr Baidyas.

"We have had no meals, nothing to eat or drink. But the piercing of a dagger, equal to Rêma's kengudê, satisfies our hunger. For us a feast is to be performed with cocoanut leaves only, and our birth place is Edambûr," said they.

Beideruli was born in a different way. There was an Ani Gaigâ, a strong wind, a strong rain, and very small drops of water, like kunkuma. Drops of water fell on the ground and the ditches were filled up. Then the god Nârâyana created a lotus, in which he created kusumas also, and in the middle of these he created a drake and a duck.

The duck said to the drake: — "He created us, but where is a tank for us to drink water out of? Where is a garden to eat fruit in? And now, too, we are on the earth below!"

Folding their wings together, they went to get a gift from the god in heaven. On the way they passed by a yard called Ajire Angana, and by a small yard called Mujire Mandal. They passed by a place where some people were talking together, and afterwards they went near the feet of the Sun and the Moon. When they reached the god Narayana, he was sleeping on jūjī and mallika, and kadika flowers, with a golden umbrella and peacocks' feathers over him. At such a time the birds approached him.

- "Why do you come?" asked the god.
- "You created us, and we want our food and drink, a tree to sit on, another to sleep on at night, and a garden to eat fruit in. Where are they?" asked the birds.
- "Being in his youth, Balu Senva with a long pole—as long as a man—and with a small quantity of money, has gone to the Ganges in the north. To reach that is six years' journey and to return back six years' journey. You had better go there. You will have a tree to sleep on at night, a stone to sit upon, and a tank to drink water from," said the god.

While these birds were on the way, they saw a thousand birds copulating.

Then the duck said: - " Let us do as they do."

"We are brother and sister," said the drake.

He became very sorrowful, and said: — "An elephant worth a thousand pugodas may be managed easily in the world. But a female is of the race of devils. She would take hold even a pindume" of Yama to have connection."

^{4.}A hot iren ball.

On which they became very sorrowful, and the duck turned back and fell at the feet of the god Narayana, and asked of him a gift of sons.

Then he said to her: - "Where is your male bird?"

She said : - " He is outside the palace."

She begged the god to create love between them.

So the god called to the drake and said to him: - "You had better copulate together, and then she will become pregnant."

So they copulated and the egg grew larger and larger in her belly. Six and three — together nine — months passed and the duck asked the drake for something.

He said to her: - " Where is the thing which you desire?"

"In the Ganges in the north there is a flower as broad as an umbrella. I want you to go and bring the (holy) water in it," said she.

He appointed a body guard for her and went to the Ganges in the north, and put his beak into the flower. Immediately the mouth of the flower shut, for the sun was setting. The duck was thinking at that time:—

"Why has the drake not returned back yet? If my husband returns and comes back soon, I will offer my first egg at the feet of the god Sûrya Nârâyana. I will offer the next egg to îśvarî." said she.

It was morning, after the 31st ghatige of the night, that the drake drew back his beak, brought the water out of that flower and asked the duck if she wanted any.

"I have made a promise. Will you fulfil it?" asked she.

He said he would and told her to drink the water. She drank, and as soon as she had done so, she sighed so as to be heard in the four worlds, and cried so as to be heard in three worlds.

In six divisions of a flower and in three petals she laid the first egg, which was like a precious stone, and the second, which was like a golden púlli.

The first egg fell into the Seventh Ocean, and being just like a diamond was found by a poor Brâhmana, when he went to bathe in the Ocean on account of an eclipse of the new moon. The drake and the duck took both the eggs to fulfil their promise, and flying to the heaven of light on high offered the first egg at the god's feet. It was trodden upon by an elephant, and placed in a road, over which an army and many other persons were passing, but it was not broken!

"You had better take this back and be happy, and hatch it," ordered the god.

The second egg was offered to the god Îśvara, who ordered them immediately to take it back and hatch it, and be glad.

From the first egg a boy Yekara Sater was produced at a palace called Kanchikadanga, and from the second egg a girl Ginde Gili Rama Deyar was produced. Yekara Sater grew to be a boy from his babyhood, and Ginde Gili Rama Deyar to be a girl from her babyhood. Yekara Sater grew to be a man from his boyhood, and Ginde Gili Rama Deyar a woman from her girlhood. Yekara Sater fell in love with the woman, and Ginde Gili Rama Deyar in love with the man. Yekara Sater went to speak to Ginde Gili Rama Deyar about marriage. She had been a beautiful child and was now a charming girl.

"It would be better if Deyar were taken to the palace Kanchikadanga," said Yekara Sater.

"This Tuesday one speaks of the marriage, and on the next Tuesday the jewel dalibandi is to be presented according to the custom of the Arasu Ballakûla." The bird is to be brought on

And the second section is the second of the

Sunday, and the marriage is to be performed according to the enterior in the anti-state of Monday," said he.

Deyar was taken at a proper time to the palace at Kanchikad degree and which she arrived Yekara Sater was being shaved. In the middle of his forehead a figure of the new to the market. The ceremony of marriage was performed on Deyar, who entered the pulse with her right foot first, when rice was sprinkled over her and flowers were through upon her. Then Deyar stood up, waved the lamps of coral and sprinkled pearls on her hadland; and then both of them saluted all present. A year and six months passed after the intringe.

"When girls that are married reach the age of ten or eleven years he the married they usually attain puberty, and sit alone for four days. But this has not happened to their Chi Râma Deyar, although ten or sixteen years have passed over her,' and some of the teories in the morning.

"If I reach puberty and have to sit alone, I will offer a golden chill, a cradle made of silver and a handful of money to Mahankali Abbe at Mala; the more certainty if I become pregnant and bring forth a child," said she.

The hair on her head faded and the nipples of her breasts turned black, and six and three — together nine — months passed over her womb.

"Through which way shall I come, O my mother?" said her sen Kumaraye, calling to his mother from her womb.

"If you come in the proper way, my son, I shall see your beauty, but if you come in any other way my son, how can I see your beauty?" replied his mother.

"Am I a wicked sinner that I should kill my mother? Am I an enemy that I should kill any person?" said he.

"If you come out, breaking through my head, you will become a Brahmirákshasa (Bhûta). If you come out, bursting through my back, you will become a serpent in Naraka. If you come out, bursting through my belly, you will become a Guliga in Pâţālam," said his mother.

"My mother, I will come out, bursting through your right breast," said her son.

Then the tenth month approached and the blood flowed out. He was born at sunrise on Tuesday. As soon as her son was born he sat down, while the mother gave him the breast. He absorbed all her blood, even from the ends of her bones. When his mother came to understand that it was impossible to satisfy the son with the milk of her breast, she fed him first with a full cow's milk, and then with a second cow's milk.

The parents called ten or sixteen female servants and said: — "O you maids, take care of our child! We go to Makali Abbe at Mala and make her our offerings."

When they went out, the boy coaxed the maids and said: — "I will go to play and return back immediately."

In a certain place the Asuras were playing at ball in their play-room. They were many, but the boy was alone.

"If you stand on one side, we will stand on the other side," said the Asuras. Though the Asuras tried all they could, they were defeated; the boy alone was successful. The Asuras played on and being tired, threw the ball into a well called Basa Bhami.

"If you are a boy, born according to all the Sastras, you can get that ball out," said they.

They let down a silken ladder, and the boy began to descend. When he went down to take out the ball, they took away the ladder, and placed a large stone on the mouth of the well, on which they put earth, and planted a pipal tree also.

⁶ Pouring water on the bride's and bridegroom's hands.

When his parents returned from making their offerings to Mâkâli Abbe at Mâla, they heard people speaking tôgether:—"Who it is we do not know; but a man has been thrown into a well, which has been covered with a flat stone, on which a pipal tree has been planted."

"No one would go to such a place, except my son to play with the Asuras," said Gindi Gill Rima Devar to the people and went to the well.

"If my son was born to only one father and mother, the stone above will break in pieces; the soil put on it will be scattered; the tree planted on it will bend and fall to the ground, and then my son will come and take milk from my right breast," said Deyar.

Her son grew inside up to the stone above. Then the stone broke in pieces; the soil was scattered away; the tree fell to the ground; and from out the well he opened his mouth to suckle his mother's breast.

"My mother, I put my mouth to your breast, as you are my mother. You must see me. With single mind and wisdom you have fed me up to this time, and treated me well. Therefore, you must see me at my full height," said he, and stood, stretching from the earth to the sky.

His mother fell senseless to the ground. Then he resumed his proper figure as a man and roused his mother: — "Mother, mother! I am your son, Brahma; and another son Parimale Ballal is to be born to you. He will be the very king of justice. If any body should abuse him, he will leave him crying. He will be apeaceful and charitable man. He will never give a harsh answer to any one," said the boy to his mother.

In the Seventh Ocean the duck's second egg fell. There was an eclipse at a certain new moon, and while the poor Brahmanas were going to bathe in the Ocean, Acha Machamma, the wife of a Brahmana, said:—"I am a barren woman. What is the use of bathing in the Ocean, or of not bathing?"

But she went nevertheless and bathed, and while she was bathing, the second egg came floating on the water like a lime. Acha Machamma took it up and brought it to her house, and put it in a heap of rice. One Tuesday at midnight a female child cried aloud.

"What is the matter? A child is crying?" said her husband.

Then he went inside and saw that there was a child like an inhabitant of the Mahâlôka Padinabha, her husband, put four leaves of a kasanam tree in the four corners of his house.

The neighbours said:—"This woman was not pregnant; what is this wonder? She had no sign of pregnancy!"

She reared the child, and had her educated. On the eighth day the child looked like a child of a month, and in a month like one of a year and half. In this way this girl grew up. Among the Brahmanas, one said he wanted to be married to her, and another said she must be married to him. In these disputes eleven years passed over the girl. She attained puberty Then her eyes were bound up with a cloth and she was left in a forest by her parents.

They were very sorrowful and said:—"We bred the child and educated her up to this day. Now she is mature, and neither marriage nor any other ceremony can be performed."

Thus they were very sorrowful and left her in the forest. In the meantime the dust of a rahu tree fell on her body from above.

"Who is it that draws toddy from the raku tree? If you untie the cloth from my eyes you are my brother and I am your sister," said the girl.

"How can I untie the cloth from your eyes? You are a Brahmana woman; but I am a Billavar by caste:" said Sayina Baidya of Asalajya Bail. "I shall go to my master and inform him of this matter at the temple of Ellur Abbe, and then untie the cloth over your eyes."

He went off to ask about this, and came to the *chávadi* of Éllür Abbe and said:—"A Brâhman woman, whose eyes are bound up with a cloth, and who has been left in the *ind*-tree garden, called Sankamalla at Râyanâd, has asked me to unbind her eyes. I told her that I would get my master's consent and go back to her," said he.

"You had better go back and take the cloth off the eyes of the woman, whose eyes were bound up, or her diamond-like eyes will be closed and she will fall. If she has eyes, she can see many countries. Therefore you had better bring her here and take care of her at Érajha," said Ellûr Abbe. "After a year and six months has passed, people will come to speak about marrying her, when you should get her married. It will be a deed of merit for you."

Sâyina went and brought the Brâhman woman to the châvadi of Ellûr Abbe, who saw her, gave her the name of Deyi Baidyati, ordered her to go to Erajha, and told her not to be ashamed and confused. A year and six months had not passed after she had gone to Erajha, when Kantanna Baidya came to speak about marrying her, and a promise of marriage for Deyi Baidyati was given, to be performed on a Monday. The next week betel-leaves and nuts were received and given back, and on the ensuing week, on a Sunday, the bride was taken to the bridegroom, and the marriage, that is, pouring water on each other's hands, was performed on a Monday morning, and rice was sprinkled on the bridegroom. In this way was the ceremony of marriage performed, and a year and six months passed.

On a lucky day of the month of Sôna, the water of pregnancy came in the womb of Deyt, and her womb grew larger. In the beginning of the ninth month of her pregnancy she was called to the bidu of Parimalê Ballal, to give him medicine. There was a large boil on his side. Birmana Baidya had applied to it a medicine with pieces of earthen rings and bottles, by which the disease was increased double.

- "Who else can give medicine?" asked Parimâlê Ballâl. "The day of death has approached me. Who can now protect me?"
 - "There is a woman, the wife of Kântanna and the sister of Şâyina," said his servants.
- "Tell me what her daily charges will be. Write a letter to Erajha. Then she will receive the letter, read it and give me an answer," said the Ballal.

So a servant was sent to Deyi Baidyati. She looked at the letter, and said:-

"I do not know what is the end of a creeper which grows upwards. I do not know a root which creeps downwards. I do not know a branch of a tree, growing on the sides. But, though I can give a medicine which I know, I cannot see my feet," said she. "You, the bearer of the letter, had better take rice for your hire in Erajha."

She brought a sér of rice, a coccanut, and two cucumbers, and gave them to the bearer.

"If you want to cook and take your food here, there is a hut for travellers built by my brother. If you want to prepare your meal here, I can get pots made of bell-metal. If you are going away immediately, O my master, you may go. If you have any business, you may go soon," said she.

Then the bearer of the letter went away from Erajha, and reached her master's biqu. As soon as she reached the biqu, the Bullal asked her: — "O my servant, did you go there as a man or as a woman?"

"My master, I came as a man. Deyl said that she did not know the ends of creepers growing upwards, nor a root growing downwards, nor even a branch of a tree growing on the sides, and that, moreover, she cannot see her feet," said the bearer.

The Ballal called his servants immediately and ordered them to take down the palanquin.

"Let a white umbrella and a large panlanquin go to Erajha!"

When the parking in arrived at Erajha, Deyl had untied the hair on the head of Kantanna flating and and had head on her lap, and was killing the lice on his head. When she stood any same naw a palarigm, soming near the paddy fields at Hantalajys, and called her husband and told him to see up to once.

When the polar, as wife up your hair immediately. O servants, put the palanquin in the hut, when he are the nearly side. O my husband, give the servants, who brought the palanquin rica, as greather and ressels, such as pots of bell-metal," said she.

Then be yi called our: — "Berodi! Berodi!" When he came, she ordered him to bring the place handfuls of roots. And she called out: — "Sappodi! Sappodi!" and: — "Yellodi! Yellodi!" and ordered them to bring medicine. She prepared a medicine of tender leaves, and their it up in a bundle, and put some presents in the palanquin. She placed a ladder organist the upper viery, took a dried cocoanut, and cut off its outer shell and scooped out inside the drought and put into the palanquin cucumbers; coloured like a squirrel, and a congestable called kinebalam of the colour of oil. She called to her husband and asked him whether the bearers of the palanquin had prepared their meal and eaten. He inquired and told Dey! that they had taken their meals, and were now washing the vessels of bell-metal. Having head this, she tied up some betel-leaves, areca-nuts with lime, and another kind preserved in water, and the very best of tobacco. The lime was as bright as the splendour of Rima. All these things were put on a plate of silver.

"Is is done well, men? Is it all right?" asked Deyi Baidyati. "Let the umbrella go first. Behind it the palanquin. You, my husband, follow them. I will follow you."

Sayina Baidya, her uncle, followed behind her. In this manner they travelled to the bidu. When the umbrella and palanquin reached the bidu, they were put down. Sayina and Kintanan went first and saluted the Ballal.

"O Kintagaa, where is Deyî?" asked the Ballâl. In the meanwhile she kept quiet, being ashumed and confused.

"Do not be ashamed and confused, mother Deyi! Let her hold my legs and apply a medicine." Let her sit on my bed!" said the Ballâl, and wept bitterly. "I was brought forth and bred by my mother Gindi Gili Râma Deiyar, but to-day I am to be born again from your womb."

"Who is there in the house? Please bring some leaves and prepare a decoction to wash his legs." said Deyi, and made (them) prepare a decoction, washed his legs and took out thorns. She rubbed the wound with leaves and uttered mantras. Then the wound swelled and began to descend. It came descending to his middle first, and then from the middle to his knee, and then from his knee to his foot. At last it fell down on the ground from his foot. Then the Ballal wished to take his food and was better. The wound was closed, while Deyi applied medicine.

"O my mother Devi, I will give you great gifts, namely, leave to put on the left side the end of the cloth tied round the middle, one pair of ear-rings and also mullukoppu ear-rings; jewel for your nose; for your hands rings fastened with gold, and balls of gold joined by cord; a dwaria for both hands and a bajiband for hands also; and a cloth of barapatte."

All these were presented; and he said to her:—"I shall present to the children born of you the paddy field in two pieces, known as Kambula at Hanidotti Bail, and, if there is anything else you want, I will give that also. O Deyt! do you hear me! you have come to my palace, therefore you must take your food of pearl-like rice."

Then were curries prepared with curds of five hundred sorts, with tamarind of three hundred sorts, with cocoanuts of a thousand sorts. Pickles of limes known as pottikanchi, narniga, and so on, together with tender bamboos, and kavade berries. Yelluri and mapale were prepared, and moreover cakes of five or six kinds, and a cake of oil-colour, too.

"Now, Deyî, you had better take your food with ghi and wash your hands with milk?" said the Ballâl, and ordered his servants to give Kantanna and Sâyına water, and to make Peyî sit in the middle! And then Deyî and the others took their food with ghi and washed their hands with milk, and chewed betelnut; and then the Ballâl told her to go back to Erajha. The right of sallanega, which the Billavars cannot have, and a koranaeji, ike a mallaka flower and a jewel with the figure of a parrot, were presented to her by the Ballâl.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., I.C.S.

(Continued from p. 65.)

Bells. - Spirits fear bells, because spirits fear music, and because they fear metal. In Hindu temples bells are generally tied in front of the shrine, and the worshipper rings them before he goes inside. That among Hindus the original object of ringing a bell before their gods was to drive away spirits, is shewn by the prayer repeated by Western India Brahmans in ringing a bell during the worship of their household gods :- "Q! bell, raise a mighty sound near the shrine that the demons may be dispelled and the gods welcomed."38 The members of one Lingayat priesthood bind a ring of bells on the leg; and at a Poona Lingayat's funeral a jungam walks in front of the procession, ringing a bell and blowing a conch shell.88 Among the wild Vaidus of Poona, on the eleventh day after a death, a januar comes and blows a conch and rings a bell in the house of mourning, and the mourning ends, that is, the dead is driven off.* In the Dekhan on the Pôlá-day, necklaces of bells are tied round bullocks' necks. Among the Dekhan Râmôsîs, men wear a girdle of silver bells round their loins. Some low class begging devotees in Poona wear a girdle of bells. 91 Bells are the emblems of Kedarling and Jotiba, two favourite Southern Maratha gods. Belgaum Lingayats have a story that the wedding of Nandi, or Basavêivar, could not go on till the heaven became a bell and the earth a bar of metal to strike the bell at the lucky moment. They have a class of converted Mhars, called Chelvadis, who head Lingâyat processions carrying a bell and bar. 22 A bell is rung at a Mhar's marriage in Belgaum. 22 After a death the Gôls, or Gopals, of Belgaum remain impure for five days, when a jangam or Lingayat priest, comes and purifies them by ringing a bell and blowing a shell.* Budbudkis, a class of Dhârwâr beggars, wear clothes, to whose skirts bells and shells are tied.** The Madhava Brâhman women of Dhârwar wear small gold bells hung from their hair close above the ear. 96 The Pâtradavarus, or high-class prostitutes of Dhârwar, wear bells, or géjju, on their legs.97 The Lavana women of Dharwar wear a bell-shaped tube at the end of their small braids of hair.98 In Bijapur, the Linguyat beadle sits in front of the dead and rings a bell. A division of jaigam beggars in Bijapur sit on trees and ring bells all day long. Another begs from door to door, ringing a bell. The Gonds have a bell god, Ghagari Pen, a string of tinkling bells.99 The Mûnâ Ojhyâls, a class of Gond bell and ring makers, are held in special sanctity.100 The Gond priest, at the great worship of Pharsi Pen, wears bells on his fore and third fingers. 100s Two bells, one of bell-metal and one of copper, were found in a cairn at Haidarabad in the Dekhan.1 Certain Vaishuava beggars of South India wear bells,2 and in Chittâgong an image of Buddhâ has a stand of bells before it. When a Wadar or Telugu

earth-digger, says his prayers he rings a bell at intervals, and blows a conch.⁴ The Vadagales, a sect of Sri Vaishnavas in Mysore, ring a bell at their prayers.⁵ In South India, during the temple service, the ministrant holds a bell in his left hand, and keeps ringing it.⁶

Colonel Leslie suggests that bells obtained their original fame as anti-demoniacal in the forest-covered countries of Asia. The Troglodytæ, when they travelled by night, fastened bells round the necks of their cattle to drive away wild beasts, and, for the same reason, the practice is common in many countries of Asia. A bell is still rung at Adam's Peak in Ceylon as a security against spirits. The Socotrans (1330) used to strike a piece of timber in lieu of a bell. The kings of Persia had robes with bell skirts, and Arab courtezans wear bells round their ankles, neck and elbows. The Shâmâns, or Tâtâr priests, are covered with tags of bells and buts of iron. The Jewish high priest's robe was adorned with a row of golden bells and point granates.

The Burmese love of bells is remarkable.¹² Most of the monasteries have a multitude of bells on all sides. The largest bells are struck with deer's horn and wood.¹³ The object of ringing bells is to draw the attention of good spirits.¹⁴ There are wooden bells in Burmese monasteries.¹⁵ The Chinese consecrate bells to make them lucky or sacred; they smear them with the blood of some animal, generally a goat.¹⁶ A sick cow in China has a bell tied to her horn.¹⁷ In China, Buddhist priests ring a bell over a corpse: — Doolittle says to secure the repose of the dead.¹⁹ Several reasons are given by the Chinese for binding bells on to cattle, horses and camels.¹⁹ The Japanese temple-women — that is, the virgin priestesses who dance — have each of them a bunch of bells. The Japanese goddess Uzumê has bells hung from a bamboo caue.²⁰

Little iron bells are worn as ornaments by the people of Ugara in East Africa. Exorcists and diviners in West Africa, inland from Benguella, were, according to Cameron, followed by men carrying bells, which they struck with iron. West African dancers wear bells. Great iron bells precede the Monbuttu chief Munza. Bells are worn at the garters by Moorish dancers. Close to the tomb of Galitzin, the prince-priest of the Alleghany Mountain, is a large bell.

Bells have been found at Nineveh. They were known to the Greeks, but apparently were not used by the Christians till A. D. 410.²¹ In 1772 the Greek Church in Skandaroon had no bell. Instead of a bell they beat on a large iron bar.²³ The Romans rung a bell in the rites for driving off the unfriendly dead.²⁴ The Russians are very fond of bells. Bells are consecrated by them.²⁰ In Russia, the bishops have little bells fastened to their robes and mantles. All post-houses have bells.²¹ The Russian church bells ring when the bishop comes.²³ Bells are of great importance in the Roman Catholic ceremonies. When the Spanish Saint Teresa (1567) started to found a convent at Medina-del-Campo in Spain, she took a picture or two, some candles, a bell, and the Sacrament.²³ When Isabella of Spain (1474) was proclaimed queen, the standards were unfurled, bells pealed, and cannons boomed.²⁴ The

Roman Catholics rid the air of spirits by ringing their hallowed bells.³⁵ In Germany bell-ringing is said to be hated by dwarfs and giants and by the devil: the devil tries to drag the bells from the churches. In the Middle Ages bells were rung to keep off lightning and the devil.³⁶

In Ireland and Scotland St. Patrick (450) and St. Columba (550) are said to have used bells to drive out demons.37 and a bell was said to be buried in St. Patrick's tomb when he died.36 In early Christian times in Ireland (500-800) bells were used in cursing.39 In Middle-Age Europe the curious said that the ringing of bells exceedingly disturbed spirits.40 In the Middle Ages (1000-1500) church bells were rung to scare storms, which were evil spirits.41 Bells used to be blessed and consecrated in the Middle Ages, and were then able to frighten demons and defeat the spirits of the storms.42 In early England, a fiend-sick person was made to drink out of a church bell.43 Burton (1621) notices that, in Roman Catholic churches, bells were consecrated and baptized to drive away devils, bugbears, and noisome smells.44 In 1798 near Strafillan, in Tyndrum, Scotland, mad people were ducked in a pool and then laid in the churchyard with St. Fillan's bell on their heads.45 St. Fillan's bell was kept loose in the churchyard. It was used in the ceremonies to cure lunatics.46 In England, bells used to be rung at Halloween.47 Large bells in England (A. D. 670) were at first consecrated and named after a saint. Bells were rung in storms (as storms are caused by spirits), and also when the Host was raised.48 Bells in England could drive off storms, lightning and hail. Their sound exceedingly disturbed evil spirits.49 In England, bells broke asunder lightning and thunder, they dispersed the fierce winds and assuaged men's cruel rage. 50 Bacon (1635) mentions that bells ring in the cities to charm thunder and scatter pestilent airs.51 Wynkin de Worde says bells are rung during storms to scare the fiends and make them cease moving the storm.52 In England, bells sometimes ring when people leave the church.53 Bells are also rung at marriages. Bells used to be baptized, named, sprinkled with holy water, clothed in a fine garment and blessed. A christened bell had power to decay storms, divert thunderbolts, and drive away evil spirits.54 A soul-bell was tolled for the dying, according to Grose and Douce, to drive off the evil spirit, who hovered about to seize the soul.55 Formerly the funeral peal was a merry peal, as if, Scythiau-like, the friends rejoiced at the escape of the dead from a world of troubles.56 In Orkney, an old iron bell was found among the remains of burials. The bell was in a rough stone chest and was close to some skeletons, which have been decided to belong to the ninth century.57 Bells have also been found buried, with other remains in North Ronaldsay and in Kingoldrum in Forfarshire.58 St. Finan's bell near Ardnamurchan, West Scotland, is probably 800 years old. It is still carried in front of the dead at funerals.59 Canterbury pilgrims decked their horses with small bells as charms and guards. On Christmas Eve at Harbury, in North England, the devil's knell is rung. The bells of Rylstone played their Sabbath music — "God us aid." In Roman Catholic countries, bells are rung when people come to communicate. In the Mass service a bell is rung three times by the acolyte before the Holy or Sanctus.64 . A bell is also rung before raising the Host, 65 and thrice at the elevation of the Host.66 In England, bells are fastened to babies'

The content of fluglish kings is announced by the firing of guns and the ringing of bells. April 19th, 1884, p. 308) contain the following Latin inscription copied from a bellem. The bring I call, the dead I bewail, the thunder I break. The trueGod I praise, the period I said the priests I gather, the dead I bewail, the plague I scare, the feast I adorn." The balls of Longittlew's Golden Legend ring:—"I praise the true God; I call the people; I assemble the elemy." The devils tried to seize the bells, but could do nothing as the bells mad both, wished in holy water. In Wales (1815), a bell called Bangu, said to have belonged to St. David, cured sickness. At Oxford, when a person of academic rank is buried, a bell-man walks in front of the coffin, ringing a bell.

Blood .— Blood is a tonic in cases of weakness, and blood-letting cures fits and nervous attacks. According to Pliny,⁷¹ a draught of human blood cures epilepsy and other diseases; and, according to Buiton (1621), bleeding is a cure for sadness.⁷²

In cases of piles the Ratnagiri Marathas give warmed goat's blood, and in cases of typhus or red disco-burnation of the skin, the patient is cured by killing a cock, and smearing the red plotches with its blood. Ratnagiri Marathas use the blood of the ghôrpar, or big lizard, as a cure in snake-bite.73 Among certain low class Hindus in Poons, blood is poured down the nose of a patient suffering from a spirit-seizure.74 Bleeding cures sickness by letting out the devil. So Freer (p. 141) says:-"By bleeding a vein I let out the devil which was crept into my palanquin bearer's fancies." The Bombay Pattarê Prabhus, before a marriage, let drops of goat's blood fall on the heads of the family goddesses.76 In Poona the blood of sheep and goats is sprinkled over the village idols.76 In Dharwar, every third or fourth year, a buffalo is killed in honour of the goddess Dayamava, and its blood sprinkled along the village boundary.77 On the Dasara day Kalâdgi Râjput householders slaughter a goat. and sprinkle its blood on the door-posts of their houses.78 Similarly at the Dasara festival some Derhan Kunbis used to sprinkle their houses with sheep's blood.79 Most Bijapur Hindus, before using the threshing-floor, kill a goat and sprinkle its blood on the floor Even Brahmans and Lingayats sometimes have their threshing floors blood-cleansed by a Maratha or Rajput neighbour or servant. The great Bijapur gun is said to have been baptised in human blood by its maker, a Rûmî, or Greek. In 1829, in the Southern Marâthâ Country, in the village of Seria, some fifty or sixty buffalces and a hundred sheep used to be killed, and after some privileged persons had taken their heads, the villagers scrambled for the rest - watchmen, shepherds, outcastes and all low and high classes, even Brahmans rolling in the mass of blood. So In East Berâr, on the Dasara day, the blood of a buffalo is smeared on the brow of the village headman.81

The Kûs of the North-East frontier drink the blood of the sacrificial bull.⁸² Among the Malers of West Bengal, in January every year, demoniacs are bound until a buffalo is slanghtered, and are then given some of its blood to drink.⁸³ So, when an epidemic comes, the Malers set up a pair of posts and a cross beam, and from the cross beam hang vessels

holding blood and spirits. The Bengal Kurmis, or Kunbls, mark the brow of the bride and bridegroom with red lead and sometimes with blood. 95

The object of the round red brow-mark worn by unwidowed women and other Hindus, which was probably originally of blood, seems to be to keep off spirits. It is also with the view of scaring evil spirits that, on investment, the brow of the Rajput chief is marked with blood taken from a man's thumb, the ceremony being a relic of human sacrifice. In Bengal the worshippers of Durgà, when a buffalo is offered, daub their bodies with earth soaked in the blood, and dance, singing indecent songs so Blood is drunk by Hindu Sâktâs, 57 The Indian overlord used to drink the blood of a defeated warrior, that the fierce spirit of the slain might be housed in him. Bhîma, one of the five Pâṇḍavas, when he killed his consin Dussâsan, drank his blood; even Sîtâ, the gentle wife of Râma, when she killed the thousand-headed Râvaṇa, drank the blood of her victim. Among the Beni-Isra'il, at marriages, the bridegroom and bride walk along a path sprinkled with blocd from the marriage porch to the house-door.

Among the Jews, when a murdered body was found, a heifer was brought from the nearest city, and the elders came and washed their hands over it in some waste land, and its head was cut off.⁸⁹ On the tenth day of the Jewish seventh month, the Jews sprinkled the Holy of Holics with bullocks' blood.⁹⁰ Blood is life. So the Jewish commandment runs:—"The flesh with the life thereof, which is the blood thereof, shall ye not eat." So, in Egypt, to keep off the spirit of death, the Israelites, ⁹² smeared the side-posts and the upper door-posts with blood. This show of blood prevented the destroyer coming into the house to smite the inmates. The horns of the Jewish altar were smeared with bullocks' blood. Moses sprinkled half the blood on the altar. ⁹⁵

When a sick child is brought to a Chinese priest, he bleeds the child, mixes the blood with water, and dipping into the mixture a seal engraved with the name of an idol, marks the child's wrists, neck, back, and forehead.³⁶ In China, rags dipped in a criminal's blood and tied to a sick-bed cure the patient.³⁷ In China, when a person is sick or possessed by an evil spirit, a goat's blood is smeared on his forehead.³⁸

The Australians, when they kill an animal, rub some of the blood on the idol's month. The Gallas of East Africa, when they cut a cow's throat, suck the gushing blood. Warm blood is a favourite draught with almost all Africans. The Bedouins of Nubia are very fond of the warm blood of a sheep. Human blood is sprinkled on the tombs of the ancestors of the kings of Dahomey, when their help is wanted in war. The Hovas of Madagascar anoint the head-stones of tombs with blood. Among the South Australians, when a boy is ten years old, several men cut themselves and smear the boy with their blood. The American-Indian Kiowas of New Mexico drink warm buffalo blood.

Pliny notices that blood on door-posts keeps off enchantments. Early men delight in drinking blood; so the Australians, Fijians, Vateans, Haidalis and Vampyres are blood-suckers. Greek ghosts drink the blood of the sacrifice, and the Mexicans' whole ritual consisted of offerings of blood. In Greece, the priest of Cybele entered a room, whose roof was full of holes, a bull was killed on the roof and the priest was drenched with a shower of blood. In North Europe, till A. D. 900, the blood of the sacrifice was mixed with ale, and

drank.¹⁴ The Norsemen prinkled their sacred vessels and all people present with the victim's blood.¹⁵ As late as the eleventh century the Swedes used to bring a horse, cut it in pieces, and radden the sacred tree with its blood.¹⁵ In Iceland, worshippers were sprinkled with blood.¹⁴ At the great nine-year festival at Upsala, in Sweden, the worshippers, the sacred groves, the gols, alters, benches and walls of the temples inside and outside were sprinkled with the blood of the human victim.¹⁵

In Austria, the blood of a criminal is a common cure for the falling sickness. Colonel J. H. White, Mint Master, Bombay, remembers (1884) that about the year 1825, when he was living on the Rhine, he one day went with a comrade to see a guillotine execution at Mayence, and, knowing the officer in command, got a place close to the platform. As the criminal's head rolled off, a man dashed from the crowd, jumped on the platform, and eagerly drank the blood as it gushed out. In Germany it is believed that, if a were-wolf, or man-wolf, is made to bleed, the spell is broken. 16

The iron clasps of the wizard's book would not yield to un-Christianed hands, till he smeared the cover with the Borderer's curdled gore.¹⁷ The reason the clasp of Scott's book opened after smearing it with blood was that the guardian fiend was driven off. The book could not be opened without danger on account of the malignant fiends which were thereby invoked.¹⁸ Draw blood from a witch, and her enchantment fails.¹⁹ A patient's blood throws back the spell on the witch.²⁰ A spell is broken if you draw blood from the person who made the spell.²¹ "Blood and fire" (the two great spirit-scarers) is the motto on the Salvationist banner: the banner of the religious ideas of the English and American lower orders — salvation, that is, spirit-scaring, being the object.²² In Scotland, the epileptic is made to drink his own blood.²³

Bread. - Hindu women, to ward off the effect of the Evil Eye, wave bread and water round the faces of their children. When a Marâthâ chief returns home, a female servant comes forward with a pot of water and some bread. She waves them three times round the face of the chief. and then throws them away.24 One of the dévaks, or wedding guardians, of the Dekhan Mhars is a piece of bread tied to a post in the marriage porch.25 Among the Khandesh Mhars. on the bridegroom approaching the bride's house, a piece of bread is waved round his head and thrown away." The Jews placed show-bread on the table outside of the veil, close to the candlestick with seven lights.27 In Germany, bread and salt protect against magic, and so witches abstain from bread and salt.28 The Roman Catholic Bishop, after Confirmation, wipes is hands with bread crumbs.29 Bread and wine are still the Sacrament in all Christian churches. In North England the bread and wine of the Sacrament are believed to cure bodily sickness.30 This is because sickness is still believed to be due to spirit-possession of the body, as sin is due to spirit-possession of the mind. In Scotland a cake was broken over the bride's head.31 In England, in 1657, it was believed that a crust of bread carried in the pocket at night kept off spirits.32 In South Scotland, when the bride returns to her house from the church, a cake of short bread is thrown over her head and scrambled for.33 Formerly cakes used to be thrown to be scrambled for on Palm Sunday,34 and Good Friday cross buns were held sovranagainst diarrhoe.35

Breath. - The guardian's breath scares flends. bewitched, the exercist rubs ashes on the child's forehead and blows into his ears. Among In the Kônkan, when a child is the Roman Catholic Christians of Thana, when a child is brought to the priest to be haptiz i. in order to drive the devil, or Inbred Sin, out of the child, and make him give place to the Holy Spirit, the priest thrice breathes upon the face of the child, saying "Exi ab co, Go on: of him."37 Kánphunkné, or ear-blowing, is a great ceremony among the Mhars of Thana. The persons, whose children are to be initiated, invite caste fellows to the ceremony, and taking with them their children and camphor, incense, red powder, sugar and flowers, they go to their jurn's or teacher's, house. The ceremony takes place at about eight at night. The teacher, sitting cross-legged on a wooden stool, worships his sacred book, and the whole company praise the gods with songs and music. The parents bring their children to the guru, and he, taking each child on his lap, breathes into both ears, and mutters some mystic words into the right ear.33 The Kôrvî fortune-teller of Belgaum, when she is going to charm a female patient, covers the patient's head with her robe, and breathes on her eyes and into her ears. 39 Among the Roman Catholic Christians of Kânara, at the time of Baptism, the priest breathes three times into the child's mouth to drive out the evil spirit and make room for the Holy Ghost.40 In 1624 the Lâmas of Tibet cured the sick by blowing on them. 41 On the Thursday before Good Friday, the Bishop and twelve priests breathe over sacred oil.42 The Russian priest blows on the child's face before Baptism.43

Brooms. — The beresma, or Parsi besom, has special power over spirits.44 In the Konkan, on the first of Kârtik (October-November), called Baliraj, or the day of Bali, the ruler of the under-world, spirits are swept out of a Hindu house, and the sweepings are thrown into the sea. In Thânâ some old Hindu women, to cure a child affected by the Evil Eye, wave salt and water round its face, and strike the ground with a broom three times.45 Similarly among the Beni-Isra'îls of Bombay, when the midwife drives off the blast of the Evil Eye, she holds in her left hand a shoe, a winnowing fan, and a broom.46 To scare a demon out of a person, the Shanars of Tinnevelly apply a slipper, or a broom, to the shoulders of the possessed.47 In Calabar, in West Africa, once in every three years, spirits are swept out of the village. 48 On the other hand, the negroes of the Congo River, about 600 miles south of Calabar, after a death, do not sweep the house for a whole year, lest they should sweep out the ghost.49 For the same reason, the people of Tongking do not sweep their houses during the days when the spirits come to pay their yearly visit. 50 So, too, the Romans used brooms, called ex verre, to sweep the house after a death,⁵¹ and at the Palilia (April 21) the stables were swept with a This, and the spirit's fear of a cane or rod, seem to be the reasons why in the Middle Ages European witches rode on broomsticks. The spirits of the air were afraidand carried the witches wherever they wished to go. In England, spirits were believed to fear brooms. So we find in Brand's Popular Antiquities, Vol. I. p. 254:— "Pales were filled, and hearths were swept against fairy elves and sprites."

Canes. — In fits, in swoons, and in seizures, beating with a cane restores the patient to consciousness; that is, beating puts to flight the spirit which has caused the disease or sickness. The cane is in Sańskrit called yôgidanda, the ascetic's rod, and a decoction of its root was believed to remove bile caused by evil spirits. ⁵² In the East Dekhan, the medium draws a circle round the possessed person with a cane, and when the medium threatens the spirit he holds a cane in his hand. The Ratnâgiri Marâthâs say that when a person is struck with an

incantation, he should at once seize a cane, as the "blow or muth" (that is the spirit in the incantation) fears cane. In the Konkan, a cane is laid under the pillow of a person who is troubled by an evil spirit,33 and in some Hindu shrines a ratan is placed beside the god.54 If a person is brought to the god possessed with a bhût, he is beaten with a cane, and the spirit leaves him.35 Vetil, the lord of spirits, the early Siva, who is much worshipped in the Dekhan and Konkan, is shewn with a racket-shaped cane as a sceptre. Sometimes he is represented solely by a cane, and it seems to be from the vet, or cane, that Vetal takes his name. Among the Dekhan Chitpavans, a cane is laid under the young mother's pillow. 58 In the Kônkan. when a medium is called to see a person who is possessed, he gives the possessed a few cuts with a cane. At the Bijapur Lingayat initiation, near the guru are placed a brass platter, a conchshell and a cane. Among the Bengal Ornous if a girl becomes possessed while she is dancing, the by-standers slap her: 7 to keep off spirits. Some of the Oraons wear a cane girdle. 58 Among certain Hindus the belief prevails that, to induce a familiar spirit to dwell in him, the medium must go naked into water up to the middle, repeat a charm which has power to bring the spirit, and at each repetition beat himself with a cane, the object of the caning being to keep the house of his body empty and ready for the proper inmate.59 The Parsis use a cane, or reed of nine knots, to drive off evil.60 In Central Asia, all Musalmans take with them to the mosque long heavy ceremonial canes. In Burma, possessed women are thrashed with a stick. 62 In the time of mourning the Motus wear armlets and waist-belts of a particular kind of cane.63 The women of the Arru Islands, west of New Guinea, wear bands of plaited cane under the knee and above the elbow, and through them pass the leaves of a plant.64 The Caroline tribes make their coffins of cane. 646 The Mexican merchants worshipped their staff, 65 and the Roman herald's staff, topped with snakes, seems to have been used to keep off spirits. Among the early Christians spirits were driven out by blows.66 In Scotland, in the seventeenth century, the queen of the fairies had a white rod, 67 witches were whipped, 68 and if a spirit or phantom was struck at, it would melt into air. The sense of the old Hindu gentleman's stout walking stick, of the fulldress eighteenth century physician's cane, of the Indian ceremonial chôb or mace, of the Bishop's crozier, of Aaron's rod, of Prospero's wand, of the field marshall's baton, of the royal sceptre, seem to lie in the sweet influences of the rod that keep far off the unhoused spirit, who seeks a lodging in the body-shrine of the honoured human being.

Circles. — As spirits fear circles and cannot cross them, devils can be kept in rings. In the East Dekhan, the medium begins by drawing a circle with a cane round the patient, apparently to prevent the spirit from escaping. Sometimes the medium also makes a circle of ashes round the patient. The walking round an honoured guest, a god, or a corpse, which is one of the commonest Hindu observances, seems to mean the keeping evil spirits from the person, god, or corpse. All higher class Hindus, especially Bråhmans, sprinkle water in a circle round their dining plates. Among the Kunbîs of Gujarât, after a birth, about ten inches of the navel cord are left, and the end is tied to a red thread and put round the child's throat. Fevers are kept off in Gujarât, as well as in the Kônkan, by tying a thread round the waist or arm, so that the evil spirit cannot pass. So threads are wound round the bride and bridegroom at the wedding of many Hindus and Pârsîs, and so, too, the making of seven circles is one of the chief parts of a Hindu wedding. Among the Gujarât Dhêdâs, a person suffering from an evil spirit has a thread tied round his arm. The Bhâtiâs fasten a bracelet round a woman's arm in her first pregnancy. So also do Gujarât Kunbîs. Wedding wreaths of red thread are

thrown round the necks of the Kunbi bride and bridegroom. The Rainurs of Karlifaway make three circles at different parts of the wedding service. The Nagar Cham are har here to Satvan turmeric, sandal paste, flowers, a coil of thread, and wheat cakes." Among the Dhruva Prabhûs of Poona, the priest passes a thread five or six times round the hashand and wife. Among the Telugu Nhavis, or barbers, of Poons, a thread is wound fourteen times round the bride and bridegroom, cut into two, and one part of it tied round the wrist of the 1 ride and the other round the wrist of the bridegroom.78 In Blabur, among many classes, the practice at a wedding is to have a surgi, or square, with a water-pot at each corner and a thread passed several times round the necks of the water-pots. Among the Madhava Brahmans of Dhârwâr, a thread is passed five times round a group of married women, who oil and turmeric themselves before the wedding.73 In Belgaum the full-moon of Sravan (July-August) is called the thread-hank full-moon. Kunbis make hanks of thread, colour them yellow, and throw them round the necks of the men and women of the family.74 Among the Kullichari Hatgars, a class of Belgaum hand-loom weavers, after the birth of a male child, a party of elderly married women come and gird the child's waist with a thread called kadadôrá."5 Among the Kânara Shênvîs, a Brâhman priest winds a thread in a double circle-of-eight pattern round the bride and bridegroom. 76 Among the Roman Catholics of Kanara, the dead have their hands tied together across the chest, and a crucifix is laid on them.77

To keep off spirits, the Orâous of Chutia Nagpur, wear a girdle of cords of tusser silk or of canes.78 In Bengal, the Hindu wife worships her husband, walking round him seven times.79 When the Hindus dedicate a temple, they walk thrice round it. 80 Hindu sat?s tied threads round their wrists (to keep off spirits).81 In India, if a Brûhman sees a temple, a cow, or a holy man, he ought to walk round them.82

The Supreme Ruler addressed Zoroaster from the midst of a vast and pure circle of fire.⁸³ The Parsis wear a girdle of thread, called kasti, round their waists. The Egyptian god Oneph was shewn holding a zone and a sceptre.84 The Jews compassed the altar.85 Mecca pilgrims go seven times round the Ka'ba, or sacred black stone.86

In Burma, when cholera breaks out, the Burmese get the priests to bless holy water and vellow threads, which they either wear as bracelets or hang round the eaves of their houses.57 The Burman king at his crowning goes round the city, beginning from the east.88 The object of the Nagas in wearing a ring of hart's horn round the point of the penis is probably to scare spirits.89 The Chinese villagers paint a circle on farm walls to keep off wolves, panthers, and foxes,90

The Dinkas of the White Nile, as a sign of grief, wear a necklace of cord. In East Africa, the wizard is tied to a stake, and a circle of fire is lighted round him, and he is roasted.92 The Hottentots wear many rings of leather round the ankle, circles of simple cords above or below the knee, and bracelets of beads.88

The Romans were crowns at their feasts (to keep off spirits); their dead were wreathed. and their victors, crowned with laurel and bay. The Romans had great faith in the virtue of the ring. When the table was spread, a ring was laid on the Roman table.44 nove a ring from the left hand to the right cured cough.44 A morsel of goat's brain passed

through a gold ring, and hopped into a new-born infant's mouth, saved it from falling spekers of The Is usuas also believed in the value of circles. The hair of a young child tied a shad the lag canel good is to take a knife or dagger, and with its point to cut two or three incarnary decides round a child and then walk two or three times round the child, was a preventure against some arg. Roman slaves were iron rings. Procession round the altar was part of the Greek veremonies. People walked thrice round the altar singing a sacred hymn.

In Skandinavia, girdles were believed to renew the wearer's strength. So Thor's girdle was strength-renewing. The Skandinavian judges used to sit in a circle, called the Dantirungre, made with hazel twigs or stones fastened together with ropes. The Skandinavians hade a circle of huge stones, and in the middle set a seat for the king when the king was crowned. The Doge of Venice was invested with aring emblematic of the ring with which he was yearly married to the Adriatic. In the Russian baptism, the child is carried three times round ine four. Pope Boniface VIII. was said to have drawn a circle round him and called up a spirit, and among the Scotch Highlanders, till 1700, it was usual to make a circle with an oak sapling to keep off spirits.

In Scotland, till the end of the eighteenth century, people used to walk three times round the dead. They walked round the church at marriages, churchings, and burials; and walked round fields with torches : all apparently to keep off spirits.7 They walked round the standing, or Druid, stones three times, and were careful to walk with the sun, that is, to keep the right side to the stone. Au epileptic person walked three times round a holy well.8 In all labour, in their lodges, such as passing round the ballot hox, freemasons move with the sun.9 Similarly, at St. Malonah, in Lewis, in the Western Islands of Scotland, mad people are made to make seven circuits.10 Moving round the church appears to have been held lucky, or rather peace-giving, in the Hebrides. Thus, St. Coivin is said to have invited all unhappy couples to meet at his cell on a given night, when, having blind-folded each person, he started them on a race thrice sun-wise round the church. At the end of the third round the saint would ery "Cabhag," that is, seize quickly, and each swain must catch what lass he could, and be true to her for one whole year, at the end of which, if still dissatisfied, he might return to the saintly cell and try a new assortment in the next matrimonial game practised as before. 11 Belts, being circles, scare spirits. So Thorne Reid, a fairy, gave his friend Bessie Dunlop12 a lace to tie round women in child-birth, to give them easy delivery.13 In East Scotland, in 1803, in the waxing March moon, westing and hectic women and children were passed through wreaths of oak and ivy.14 In Scotland (1860), people tied threads round women and cows to prevent miscarriage.15 In Scotland it is still believed that any piece of a wedding cake, that has to be dreamed on, should first be passed through

Rings were used in the coronations of English kings. King Edward blessed cramp rings. Rings were hallowed in England on Good Friday by the Kings of England. These rings cured cramp and falling sickness. Conquerors and sorcerers defended themselves against charms by drawing circles. In England, in the sixteenth century, rings were believed to cure cramp. In the eighteenth century, in Orkney, people drew magic circles, and placed knives in their

----house walls to guard against witches.22 In cases of fits it was common to make the patient wear a ring as a cure. So the Devonshire saying was: - "Get seven sixpeness each from a maiden in a separate parish and make a ring, and you will cure the patient of fits "2" In Somersetshire, if a ring finger is stroked over a wound, the wound will heal.24 In Queen Elizabeth's time, rings were given away in great numbers at weddings.25 The wedding ring is worn on the fourth finger, because an artery was believed to pass from that finger direct to the heart.26 It is unlucky to take off a wedding ring.27 If a wedding ring wears out, the woman or her husband will die. If a woman breaks her wedding ring, her husband will die za In the Roman Catholic marriage service, a gold ring is blessed, signed with the cross, sprinkled with holy water, and put on the bride's left hand, on the thumb, and on the second, third and fourth fingers, and then allowed to remain on the fourth finger." In North England, to cure epilepsy, a half crown is taken out of the church bag and made into a ring.23 Galvanie, or copper, rings cure rheumatism. A Sacrament shilling out of church plate cures epilepsy. 30 In England, a wedding ring heals warts.31 In 1854, in North Devonshire, a young woman subject to fits went to church with thirty young men. At the end of the service she sat in the porch, and each of the young men dropped a penny in her lap. The last took the pennies and gave her half a crown. She held the half-crown in her hand, and walked thrice round the Communion She made the half crown into a ring, and were it to recover her health.32 In Hereforshire, a ring made from a Sacrament shilling cures fits.30

Knots are circles, and so, like circles, spirits are afraid of knots. So the Vadval and Kolî exorcists of Thana lay a spirit by tying several knots on a black silk or cotton thread. In the Kônkan, fevers, especially intermittent fevers, are stopped by the exorcist tying a knotted armlet round the arm of the patient.34 In the Kenkan, it is a common Hindu belief that spirits are afraid of the Brahman's sacred thread, because it has several knots, called Brahma-granthis, or God's knots.35 In the Könkan, on the bright fifteenth of Travan (July-August), a knotted sfik or cotton thread called raksha or rakki, that is, guardian, is tied by Hindu men round the right wrist and by women round the neck. believed to guard the wearer against sickness or misfortune.36 In Gujarât, if a man takes seven cotton threads, goes to a place where an owl is hooting, strips naked, ties a knot at each hoot and fastens the thread round the right arm of a fever patient, the fever flees. In the Munj or Thread Ceremony, the munj-grass thread that is put round the Brihman boy has a knot for every year of his age.37 The Hindu sannyasi's staff should have seven knote.38 The object of tying or knotting the robes of the bride and bridegroom at almost all Hindu weddings seems to be to keep spirits away.38 The Parsis set special value on a stick with nine knots.40 The object of wearing the Parsi thread is more clearly told than the object of wearing the Brâhman thread. The thread, which is of white wool, is worn by men, women and children after seven. It is bound on several times a day, and always with the prayer - " May the devil and all his angels be broken." 41 Like the Parsi kast, 42 with its four knots, the sacred thread of the Jews is knotted.43 Pard corpse-bearers tie a cord round their wrists.44 In Burma, to prevent spirits escaping, a knotted, charmed thread is thrown round the neck of the bewitched person, 45 and to keep off diseases the Barmans insert little knots under the skin.44 A Roman knot with no ends stopped bleeding." Witches in the Isle of Man tied strings into knots and

enthrop the state of Van machine and section and secti sold them. In England there was a belief that on St. Agnes' Eve, if the left garter was knotted round the right stocking, the wearer would dream of her future husband.49

Arches are half circles, and, like full circles, scare fiends. So the Konkani Kunbis of Poona make an arch of mango leaves over the door of the wedding porch. 50 and among the Likharis, or Marwari, lac-bracelet makers in Ahmadnagar, a tinsel arch is made before the bride's house. 51 So in times of cholera a toran or arch is set up outside a Guiarât village to stay the entrance of Mother Cholera.52 Charms are hung on arches in front of the palace at Dahomey.53 And at Dahomey they have also tall gallows of thin poles with a fringe of palm-leaf to keep off spirits.54 These African gallows, like the cholera or small-poxstopping torans of Gujarat villages, and the Bengal Malers posts and cross-beams, seem to be the rude originals of the richly carved gateways of Sanchi and other topes, which. like them, are crowned with charms, the Buddhist emblem of luck or evil-scaring.55 In Devonshire, black bead, or pinsoles, is cured by thrice creeping on hands and knees under or through a bramble. The bramble ought to form a natural arch, and the roots and rooted branch tips should be in different properties.56

(To be continued.)

DESCRIPTIVE CATALOGUE OF OBJECTS MADE AND USED BY THE NATIVES OF THE NICOBAR ISLANDS.

BY E. H. MAN, C.I.E.

(Continued from p. 112.)

12. Articles for preparing and taking Food.

- 113 (m). Shinlo. Wooden scoop for serving boiled rice to guests and others.
- (m). Tanônga (C. N. Sanòng-terīla). Wooden pestle, used in preparing the Cycas-114 paste in a wooden trough (vide No. 117).
- (m). Danua-han. Pestle of smaller size: used for pounding chillies in a cocoanut-115 shell mortar (vide No. 38).
- (m). Entana-momua. Grating, used when preparing Cycas-paste (vide No. 47). 116
- (m). Holshoal (C. N. Takachawoh). Wooden trough, used for feeding pigs and dogs. 117 Similar troughs of smaller size are used in preparing Cycas and cocoanut paste, boiled rice, etc., for their own consumption. Sometimes a large clam, i. e., Tridacnashell, is used as a trough for feeding their animals.
- (m). Shala or Shala-larom. Plain wooden board, used in preparing Pandanus-paste. 118
- (m). Shanos (C. N. Lansichya). Spit, on which fowls, birds, and fish are broiled over 119 a fire; the other end is stuck into the ground beside the fire or held in the hand. The shanos used for fish is kept apart, and not used for other descriptions of meat. This implement is likewise employed for taking meat, vegetables, etc., out of a pot when cooking. It is generally made of the wood of the Areca catechu.
- (m). Chanep-not. Pointed stick, for taking boiling pork out of a pot. 120
- (*). Kanlok-not. Pointed stick, used for killing a domestic pig. It is thrust into his 121 body immediately below the breast bone, and upwards towards his heart, thereby causing death in a few seconds, and with the expenditure of only a few drops of blood. Sometimes an iron spike, bayonet, or even a ram-rod (obtained from shiptraders) has been used for this purpose. In like manner, a fowl is frequently killed

by piercing the cavity behind the skull (Medulla oblongate) with a stout feather plucked from its own wing.]

122 (m). Shanòn-hishōya or Tendūha (C. N. Kenvīap-fiīh). Curved iron implement with sharp edge at the upper end and fixed in a bamboo handle: used for scooping out the kernel from ripe cocoanuts, when required for making hishōya (vide No. 33).

13. Household Articles.

- 123 (m). Hifaih or Hifaish (C. N. Sanap). Hoe, used in digging up yams etc., and in planting seedlings. Similar, but separate, hoes are used for digging a grave, and for the disinterments which occur at the concluding memorial-feast.
- 124 (m). Kenwah-enchon or Wane-enchon (C. N. Kondrah-chon). Rake, for scraping away rubbish from the vicinity of a hut.
- 125 (m). Kanwol-enchon (C. N. Hanak-chon). Wooden scraper, used for making a channel for rain-water in the sand under the eaves of a hut.
- 126 (m). Kanīala (C. N. Tanôma). Wooden pillow. Various descriptions are made and used. At Car Nicobar, the floor-beams are sometimes so made as to be a few inches above the rest of the floor. They thereby serve for providing a substitute for pillows for several persons.
- 127 (f). Entōma-kōi. Cloth-ped in the form of a pillow, used in the Central and Southern Groups for flattening the occiput in infants. No pressure is used, the babe being merely kept flat on its back, generally in its mother's lap, for as long as possible, with its head resting on the pad. By the time the child is about 18 months old the desired flatness of the occiput has generally been attained. The natives of Car Nicobar, Chowra, Teressa, and Bompoka have apparently never adopted the practice.
- (m). Kenrāta. A description of calendar, generally in the form of a wooden sword-blade, used at Car Nicobar. Along the narrow space each incision denotes a "moon" (lunar month), and along the broad space the intermediate incisions indicate a day. The number of diagonal cuts in one or other direction denote respectively the number of days in each stage of the waxing and waning moon. After one side of this blade-like object has been thus marked, the other side is similarly treated. The object of this calendar is to record the time occupied by some event, such as that of an infant in learning to walk. Parents are thereby enabled to compare the relative precocity of their respective offspring,
- 129 (m). Sanat-tabaka. Cigarette-holder, used by Car Nicobarese women for the first two months after child-birth, their hands being held to be unclean during that period. The cigarettes are made and placed in the holder by some friend.
- 130 (f). Lam-tabaka. Cigarette, made and used at Car Nicobar.
- 131 (m). Hen hen (C. N. Enkot). Long pole provided with an iron blade at the upper end and used for severing bunches of Pandanus fruit, betel-nuts, and Chavica leaves, which are otherwise out of reach.
- 132 (m). Henhēat-hishōya (C. N. Kenwòk). Hooked pole, used for lowering and raising a pair of hishōya (vide No. 33), when drawing water at a well.
- 133 (m). Henheat-enyun. Similar implement for lifting an enyun (wide No. 95), in order to take out any fish which have been entrapped in it. At Car Nicohar a float is provided for raising the enyun.

14. Articles of Shells and Fibres.

- 134. Ck-kanlai (C. N. Ko-niat). Capsa rugosa, Arca, or Anatinidæ shells, used for scraping the kernel of the ripe cocoanut in order to form paste. When so employed it is styled kanchuat-ngoat, lit., scratch-cocoanut (vide No. 41).
- 135. Ok-kaniahan (U. N. Kannih). Cardium and similar shells, used in the same way and for the same purpose as the ok-kanlai (vide No. 134).
- 136. Ok heēu. Shell of the genus Mytilus. Is used for removing the pellicle of Pandanus drupes, by scraping with the sharp edge of the shell, and prior to using the Cyrena shell (vide No. 137).
- 137. Ok-hangai (C. N. Kenfūat or Tenköh). Cyrena shell, used for removing the pulp from partially boiled Pandanus drupes when preparing the paste: also at Chowra, when pot-moulding, in order to remove particles of stone, etc., from the clay surfaces of the utensil in process of manufacture. Small specimens are sometimes used by old persons as spoons, when eating the soft fruit of the unripe cocoanut. For this purpose, however, it is more usual to improvise a spoon by cutting off with a dáo a small portion of the outer husk of the nut.
- 138. Ok-pūka. Cypræa shell, used at Chowra for smoothing the surfaces of a newly-moulded pot, prior to baking.
- 139. Ok-dēyà (C. N. Ok-mopīat). Dried ray-fish hide, used as a grater in preparing an ointment called Kala-fēha (composed of the powder of a certain jungle-seed mixed with cocoanut-oil), which is applied to the temples as a cure for head-ache. Also employed, like emery-cloth, or sand-paper, for smoothing surfaces of wood and cocoanut-shells.
- 140 (f). Ok-ho. Bark-cloth, prepared from the bark of the Ficus breviouspis, chiefly by the women of the coast and inland tribes of Great Nicobar. It is worn, in the form of skirts, by the coast-women of Great Nicobar when mourning. Many of the Shom Pen women wear it continually, when unable to procure calico from their coast neighbours. The process of manufacture is simply soaking a piece of the bark of the requisite dimensions in a fresh-water stream till the pulpy substance can be readily extracted by pounding the material between large smooth stones. When only the fibrous substance remains the piece is spread, or suspended, in the sun to dry.
- 141 (f). II. Fibre obtained from the bark of the Anodendrum paniculatum. It was formerly used for providing thread for sewing, but cotton thread, purchased from ship-traders, is now in common use. It is sometimes used for cleaning Pandanus paste, when hennoat fibre is not at hand (vide No. 144). The Andamanese regard this as the most valuable fibre obtainable on their islands; their bow-strings, arrow-fastenings, fine-nets, etc., are made of it.
- 142 (f). In-dai-shuru. Fibre of the pineapple-leaf. It has at times been used for sewing purposes, and also for cleaning Pandanus-paste (vide No. 144).
- 143 (f). Paiyua. Fibre of the Gnetum edule. Although known to the Nicobarese, their wants being better supplied by other plants or means, they have apparently never had recourse to this fibre, which is extensively used by Andamanese in the manufacture of their hand-fishing-nets, sleeping-mats, and occasionally for arrow-fastenings.
- 144 (f). Hennoat (C. N. Henen). Fibre obtained from the Melochia velutina (Nic. Henpoan). One of these fibres serves the useful purpose of removing the fine filaments from a loaf of freshly-prepared Pandanus-paste. This work is performed

by women, who, in its preparation, pass the fibre continually through the mass of doughy substance, very much after the manner that a grocer cuts through a choese with a piece of wire. The operation is continued until no more filaments are extracted by the fibre, which, when employed in this way, is called Kanewat. Since the abandonment of the harbour at Nancowry as a Government Penal Settlement, the natives have discovered that the fibre of the alocs planted by the English surpasses that of the Melochia velutina for this purpose. A stout strip of the fibrous-bark, tied into a loop and placed over the ankles, is used when ascending cocoanut-trees. It is called Yiap when so used. The Andamanese make use of this fibre in the construction of their turtle-lines, nets, etc.

145 (m), Het-toit (C. N. Tako-waha). Fibre of the Greenin gnemon. This is the most valued and useful fibre of the Nicobarese: their cross-bow strings, spear-fastenings, harpoon- and fishing-lines are made of it.

15. Articles connected with Superstitions.

- (m). Fum (C. N. Anuma). Plantain-leaf necklaces. These are made by slitting young plantain-leaves. The numerous narrow shreds thus formed are suspended round the neck by members of both sexes at memorial-feasts. These temporary necklaces, when freshly made, are attractive. They are also placed round the necks of the kareau (vide No. 152), where they remain till they wither or are renewed at some subsequent feast. The object of these necklaces is to please the spirits of those they are commemorating, as well as the īwī-ka, the friendly spirits.
- (m). Shīm. A peculiar description of cage made of young cocoanut-leaves: used for entrapping evil spirits at a time when there is any unusual sickness in a village, Certain leaves, which are placed inside the shīm, are supposed to possess the virtue of attracting the spirits. With the object of ridding the village and island of the presence of the evil spirits, a singular raft, called henmai (vide No. 148), is constructed and provided with sails, consisting of trimmed cocoanut-fronds. When the henmai is ready the Shāmans (Menlūana), after great exertions, succeed in capturing the malign spirits and imprisoning them in the shīm or shīms, which are then placed on the henmai. This is then launched and towed out to sea by men in canoes. A similar object, called en-toh, is made and used for the same purpose at Car Nicobar. It sometimes happens that a henmai drifts to some other village, in which case it has been usual for the men there to shew their resentment by turning out with their fighting-sticks (vide No. 28), and attacking the men of the village whence the henmai was despatched.
- 147 a. (m). Henmai (C. N. En-tôh). Picturesque raft, constructed of light spars and provided with small masts and cocoanut-leaf sails. One or more of these is made and launched on various occasions for the conveyance to sea of evil spirits; vis., (1) on the completion of a new hut, in order to ensure that no wandering spirits that may be lurking about may enter in and take possession prior to its intended occupants; (2) at the entoin memorial-feast, provided the wind be favourable, i. a., off the land; and (3) when much sickness is prevalent, or any misfortune has occurred, such as a fatal accident. For the mode of capturing evil spirits for shipment to sea by means of the henmai see No. 146.
- 148 (m). Kiraha. Cocceanut-leaf tray, on which food for the use of the evicted spirits is placed in the hannel, before this raft is towed out to sea.
- 149 (m). Halala-kamapah or Halala-kamili. A hat, which differs only from No. 29 in being ornamented with cloth in folds: placed on a disinterred male skull on the night of the final memorial-feast (Contral Group).

- 150 (m). Hoto-kamapah. A hat placed on a disinterred female skull on the night of the final memorial-feast. The greater portion of the rim consists of cigarettes, neatly arranged round the crown.
- 151 (m). Da-yung. A narrow board (sometimes cut from a cance belonging to the deceased), placed beneath the corpse before wrapping the winding sheets, the object being to stiffen the corpse for conveyance to the place of interment.
- (m). Kareau. Carved wooden human figure, generally about life-size, kept in a hut to 152 frighten away the iwi, i. e., the evil spirits. When newly-made, and on the occasion of any sickness in the hut, it is regarded as a henta-kōi (vide No. 153). Those representing a woman are assumed to be equally feared by the bad spirits, as they are credited with the faculty of giving notice to the other kareaus whenever the spirits intend mischief (Central Group). At certain villages on Teressa and Bompoka, the kareau is hollowed out in the trunk, and contains the bones of some famous Menluana, i. e., "medicine-man" or exorcist, many years deceased, while his skull and law-bone are fixed in a socket provided for the purpose between the shoulders of the figure, which is usually, if not invariably, represented sitting crosslegged. On the skull is generally to be seen an old silk-hat or other foreign headgear. These kareau are so highly esteemed that no reasonable offer would serve to secure a specimen. In the Southern Group and at Chowra, there are but few kareau, and those small and inferior and copied from the type in the Central Group. At Car Nicobar, none are to be seen.
- 153 (m). Pomak-dih. A large neatly-constructed bundle of trimmed firewood in the form of a cylinder, commonly seen under huts in the Central Group for the purpose of being offered by its owner on the grave of any relative who may die. It is never kindled, but is merely regarded as an offering, which has cost the donor some time and labor to prepare.

16. Domestic Objects.

- 154(m&f). Minol-onh (Car Nic, Ngoh). A roll of ordinary firewood, consisting merely of faggots tied together and forming a cylindrical bundle. A number of these are kept dry under the hut for use when required,
- 155. Inuain. Tool used in scooping a log in order to form a cance. The iron head is obtained from ship-traders. The chief peculiarity in this object is that, by altering its position in respect to the handle, it can be used for scooping any portion of the interior of a cance-shell. A small specimen is styled kenlanh.
- 155 (a). European axes (Enloin), and adzes (Danan), are imported and extensively used.
- 156. Tanap. Burmese lacquered betel-boxes, imported and to be seen at most villages especially at Car Nicobar.

(To be continued.)

MISCELLANEA,

THE TENTH CONGRESS OF OBJENTALISTS,
GENEVA, 1894.

I REPRESENTED the Bengal Government, the Bengal Asiatic Society, and the Calcutta University, at the Tenth International Congress of Orientalists held at Geneva, in September 1894, and the following notes and extracts from the diary kept during the meeting may, therefore, prove of interest and value to the readers of the Indian Antiquary:-

Notes.

It will be seen from the extracts from the diary that the thorny question of transliteration was attacked by a strong committee of the sevens present, and at last a scheme (admittedly a compromise) has been adopted for general use over the civilized world. It may be hoped that uniformity will, in future, exist in the transcription of Oriental languages by scholars of all nations. Although not a member myself of the committee. I was in constant friendly communication with its members, and was examined as a witness, or. perhaps more accurately, was allowed to plead the cause of India before it. I am glad to be able to state, as the direct result of my efforts, that a scheme has been adopted which can be accepted without difficulty not only by Indian scholars, but also for the purposes of ordinary common life. The system originally proposed and half adopted, though admirably scientific. and preferable from a scholar's point of view, had no chance of being accepted for general use in India. Now, however, the needs of Hindustani, Hindi, and other modern Indian languages have been considered, and very few and unimportant changes in the Jonesian system at present in use will be required.

Another subject of considerable interest to the Indian public was discussed by the Congress. I allude to the present uncared-for condition of the Asoka inscriptions, and to the efforts which the Trustees of the Indian Museum are making for their preservation. In connexion with this, a resolution was passed by the Congress thanking the Trustees for their action, and urging the importance of the matter upon the attention of the Government of India. As Philological Secretary and Delegate of the Asiatic Society of Bengal and as a Trustee of the Indian Museum. I was enabled to give the Congress accurate information concerning the subject. The resolution was the result of important speeches by three of the greatest authorities on Indian epigraphy now living-Dr. G. Bühler of Vienna, M. E. Senart of Paris (both of whom have made a special study of the Aśôka inscriptions), and Dr. Burgess.

In the matter of social arrangements, nothing more cordial can be conceived than the welcome accorded to those assembled, not only by the President of the Congress, but by the Canton and by the town of Geneva, as well as by the private inhabitants of the neighbourhood. Almost every day while the Congress lasted there was an excursion, a garden party, or a dinner, and, although the hospitality was shewn on the widest scale, each guest somehow felt that he was receiving the personal attentions of his host in a manner as flattering as it was gracious. It must not, however, be imagined that the Congress was a mere round of festivities. A great deal of important and solid work was got through. But this hospitality happily forwarded another of the

great objects of these Congresses, the bringing together into personal intercourse of scholars who, but for them, could never meet, and who have hitherto communicated with each other only by correspondence, or, perhaps, by somewhat heated polemics. Putting the public sectional papers to one side, many disputed points were discussed in friendly conversations, and many scholars found that, after all, they did not differ so widely from their confreres as they had imagined.

Extracts from the Diary.

- 1. I arrived in Geneva on Sunday, the 2nd of September. On Monday, evening, the 3rd, there was an informal réunion at the Hotel National, where all the members, who had by that time arrived, renewed old acquaintances and made new ones.
- 2. The formal opening of the Congress took place in the Aula of the fine University buildings at 10 a. m., on Tuesday, the 4th September. The proceedings commenced with a short speech from Colonel Frey, President of the Swiss Confederation, and ex-Honorary President of the Congress, in which he welcomed the foreign members in the name of Switzerland. He was followed by Mr. Richard. President of the Council of the Republic and Canton of Geneva, and Honorary President of the Congress, who welcomed us in the name of the former body. M. Naville, the learned Egyptologist, the President of the Congress, then gave his presidential address. He gave a rapid summary of the history of Oriental studies in Geneva, and maintained that one of the great features of modern discoveries was the close connexion which existed between the ancient civilizations of the world. He made special reference to the intimate relations which have lately been found to have existed between the civilizations of Greece, Egypt and Nineveb. He thanked the Federal and Cantonal authorities for the support which they had lent to the Congress. the sovereigns and members of sovereign families who had accepted the titles of Patrons and Honorary Vice-Presidents, and finally the savous, who had responded in such large numbers to the invitation of the Committee of Organization. M. Maspero in the name of the Government of France, Lord Heay in the name of his fellowcountrymen, Professor Windisch in that of the German scholars. Count de Gubernstis in the name of Italy, and Ahmed Zeky in the name of the Khedive, wished success to the Congress, and thanked Geneva for its hospitality. A number of presentations of Oriental works were then made to the Congress by authors, by learned societies,

and by Governments. A committee to settle a uniform system of transliteration to be adopted by all Oriental Societies and by Oriental scholars of all countries was then appointed. The members were Messrs. Socin, Barbier de Meynard, de Gæje, Plunkett, Lyon, Bühler, 'Senart, Windisch, and de Saussure. The proceedings terminated at midday with the appointment of the Consultative Committee.

3. The members of the Congress divided themselves in the afternoon into the following sections:—

I. - India -

President, Lord Reay; Vice-Presidents, Messrs. Weber of Berlin, and Bühler of Vienna.

I bis. - Aryan Linguistics-

President, Signor Ascoli; Vice-Presidents, Messrs. Bréal and Schmidt.

II. — Semitic Languages (non-Musalmân) — President, M. Kautzsch; Vice-Presidents, Messrs. J. Oppert, Tiele, and Almkvist.

III. - Musalman Languages -

President, M. Schefer; Vice-Presidents, Messrs. de Gœje, Goldziher, and Sachau.

IV. — Egypt and African Languages — President, M. Maspero; Vice-Presidents, Messrs. Lepage, Renouf, and Lieblein.

V. - The Far East -

President, M. Schlegel; Vice-Presidents, Messrs. Cordier and Valenziani.

VI. - Greece and the East -

President, M. Merriam; Vice-Presidents, Messrs, Perrot and Bikélas.

This was a new section, opened for the reasons given in M. Naville's presidential address.

VII. — Oriental Geography and Ethnography —
President, Professor A. Vambéry; VicePresidents, Prince Roland Bonaparte,
and M. de Claparède.

This also was a new section.

- 4. Section I. (India). —This section held seven sittings, and among the subjects of interest may be mentioned the following:—
- (a) Professor Weber spoke in moving terms on the late regretted death of Prof. Whitney, the great American Sanskritist. On the motion of Lord Reay, the President of the section, a message of condolence was sent to the widow of the deceased scholar.
- (b) M. Separt laid before the members present some photographs of inscriptions lately discovered by Major Deane in Afghan territory. They

were in an unknown character and had not yet been deciphered. Rubbings of these inscriptions were exhibited at a meeting of the Asiatic Society of Bengal some months ago.

- (c) Mr. Cecil Bendall shewed rubbings of a short inscription in the Indian Museum. The inscription is interesting, as being written in the somewhat rare "wedge-headed" characters hitherto only found in Nepal, and was a unique example of an epigraph couched in literary Pâli. It formed a portion of the collection made by Mr. Broadley in Bihâr.
- (d) Professor H. Oldenberg read a paper on the Vedic religion, in which he endeavoured to distinguish the mythical, the popular, the Indo-European, the Indo-Iranian, and the Indian elements of the Vêdas. He maintained that Varuna (the god of the ocean), was primitively a lunar deity. This paper provoked some lively criticism on the part of Dr. Pischel, the leader of the Euhemeristic School of Vedic scholars.
- (e) Professor von Schreder read an important paper on the Kāṭhaka recension of the Yajur Vēda, its manuscripts, its system of accentuation, and its relationship with the works of the Indian Grammarians and Lexicographers. A manuscript of the work recently found by Dr. Stein in Kaśmir has revealed many peculiarities, and has enabled Dr. von Schreder to recogize several allusions to the work in the satras of Pānini.
- (f) Professor Leumann gave an interesting account of the Jaina Avasyaka, more especially of the two first parts of that work,—the Samdyika, a kind of prose creed, and the Chaturvińśatistova. He presented a facsimile of a manuscript of this work, which he intends to publish by subscription. Professor Weber drew attention to the great antiquity and importance of the Samdyika. The members present congratulated Prof. Leumann and wished him every success in his enterprise.
- (g) A short paper was read by Dr. Pfungst on "Esoteric Buddhism," which he described as based on ideas held by a number of incompetent persons. Messrs. Kuhn, Weber, Leumann and Bühler, etc., cordially agreed with Dr. Pfungst and the so-called system was denounced on all sides as ein vollständiger schwindel. Dr. Pfungst proposed that the section should pass a formal resolution to that effect, but this did not meet with the approval of the savans present, as the general opinion was that the subject was beneath the cognizance of scholars. The remarks of Prof. Weber on the political importance of the movement were specially noteworthy, as showing the close interest taken in Indian affairs by German scholars.

- (h) Mr. Bhownaggree, the Delegate of the Mahârâja of Bhâvnagar, presented three communications one by Mr. J. N. Unvala on Zoroastrianism, one by Mr. J. J. Kaniâ, on The Philosophical Schools of India, and one by Shèkh Muḥammad Isfahânî on Sufism. He presented to the Congress a handsome volume of Sanskrit and Prâkrit inscriptions existing in the Bhâvnagar State published at the expense of the Mahârâja, and concluded by reading a work by Mr. S. D. Bharucha on The Persian Desatir.
- (i) Dr. Bühler made an important communication regarding the well-known Asoka inscriptions of India. The historical and linguistic value of these ancient monuments cannot be overstated. Nevertheless, they are lying exposed to the weather, and within recent years have suffered considerable injuries both from that source and from iconoclasts or relic hunting tourists. They are also inconveniently situated, some in the extreme North-West, others in Orissa, others in Maisur, others in Gujaråt, others in Central India. and others again in Népal. Even when approached. some of them are so placed that they cannot be read without using scaffolding. I was enabled to report to the Congress that, to remedy this state of affairs. the Trustees of the Indian Museum had offered, if funds were made available, to take facsimile casts of all these inscriptions, and to form an Aśôka gallery in their building, where these casts could be collected and made accessible to students. Messrs. Bühler, Weber, Burgess, Senart, Bhownaggree, and Lord Reay, all spoke warmly in support of this proposal, and the following resolution, which was subsequently adopted by the Congress as a whole, was passed by acclamation :-

"Que l'administration du Musée Indien de Calcutta sera remerciée, au nom du Congrès, des efforts qu'elle fait pour la préparation de moulages des inscriptions d'Asôka; et que le Gouvernement de l'Inde et les Gouvernments qui en dépendent seront priés, au nom du Congrès, d'adopter les mesures de préservation et de reproduction de ces monuments, proposées par la dite administration."

- (j) Count de Gubernatis presented some interesting notes on the influence of the Indian tradition on the representation of Hell in the poetry of Dante, and on the freecos in the Campo Santo at Pisa.
- (k) Professor Sylvain Lévi, one of the most rising of the younger school of Sanskrit scholars in Paris, and who is one of the few who knows at once Sanskrit, Tibetan, and Chinese, gave a most interesting account of a Sanskrit poem by Harsha Charita of Kasmir, discovered by him in a Chinese version of the Buddhist Tripitaka.

Although in Sanskrit, the whole was written in Chinese characters, and besides its intrinsic value, it gives us information of the greatest practical importance as to the system adopted by the Chinese in transliterating Indian words into their character. The lecturer illustrated this by applying the results obtained by him to some doubtful names of peoples mentioned by Hiuen Tsiang.

5. Section I bis. (Aryan Linguistics). — Few papers in this section were of interest to Indian students.

Most interest was excited by Prof. J. Schmidt's paper on the vocalic r, l, m, n, the existence of which in the original Indo-Germanic language has been asserted by the new school of comparative philologists, headed by Prof. Brugmann. Professor Schmidt, representing the older and more conservative school, strongly combated the existence of these vowels. His arguments are too technical to reproduce here, but they were listened to with great attention, and the reading of his paper and the ensuing discussion took up the whole of one sitting, the latter being continued on the following day.

Professor Leumann read a short paper on the exchanges of forms such as khid and khid in the same root in the Vedic language, in connexion with the presence or absence of a prefix, and with accentuation.

Professor Wackernagel read a paper on the place of Sanskrit in modern philology. He combated the opinions of those whe would diminish the linguistic importance of that language. He pointed out the special importance of the knowledge which we possess of the different periods in the history of the language, from the Vedic times down to the Sanskrit of the Bensissance. Moreover, some peculiarities of Sanskrit syntax could be used to explain certain obscure phenomena in allied languages. He finally defended the accuracy of the Hindft grammarians against the assaults which have been made against them of late years.

At the first meeting of this section Signor Ascoli lamented the deaths of Profs. Whitney and Schweizer-Sidler, and in this he was followed by M. Bréal and Prof. Weber.

6. Section II. (Semitic, non-Musalman languages).—As might be expected, nothing of interest to Indian scholars took place in this section. Considerable interest was excited by the presentation by Doctor Bullinger of a copy of the new edition of the Hebrew Bible, just completed by Dr. Ginsburg. Mrs. Lewis gave an account of two Palestinian Syrise Lectionaries and of a Syriae manuscript of the gospels, disco-

vered by her at Mount Sinai; this also excited much interest. Professor Haupt made a learned communication on the situation of the Paradise of the Bible, and was not able to locate it in any definite place. Dr. Cust contributed an interesting printed essay on the ancient religions of the world before the Christian era, and M. Halévy maintained the importance of Assyriological research in connection with sound Biblical criticism.

7. Section III. (Musalman languages). - The proceedings commenced with a special mention of the loss of Prof. Robertson Smith, made by Prof. Goldziher, and the same scholar at a subsequent meeting read an important paper entitled "Observations on the primitive history of poetry among the Arabs." It is thus summarised in the Proces Verbal :- " Poetry began with magic incantations. The Arabic poet is first of all an enchanter. His name, shair, the knower, is identical with the Hebrew vid'oni. The principal duty of the poet was to injure the enemies of the tribe by magic formulas. We find the most ancient example of this function of a poet in the Old Testament, in the history of Balaam. Professor Goldziher endeavoured to reconstitute these formulas, as they were amongst the ancient Arabs, and shewed that their form was that of the saga, in which metre was a later development. In the course of centuries these magic formulas gave rise to satirical poetry, the primitive recitation of which was accompanied by various external gestures. The old terminology of Arabic poetry has preserved many traces of this origin. For instance, the term kafija, of which the original meaning is "formula overwhelming the head of the adversary."

Professor D. Margoliouth described the correspondence of Ibn-al-athir al-Jazari, preserved at the Bodleian Library. These letters are dated from 621 to 627 A. H.

M. Grünert gave an account of Dr. Glaser's recent discoveries in Arabia, and a valuable paper was read by Dr. Horn on his discoveries in Persian and Turkish in the Vatican library. Dr. Seybold read a paper on the Arab dialect spoken at Grenada, pointing out how much still remained

to be done for the accurate study of the Moorish régime in Spain.

- 8. Section IV. (Egypt and African languages). The chief papers were from Prof. Piehl on Egyptian Lexicography, and from Drs. Hess and Krall on a Demotic work discovered in the Rainer Collection. Much interest was likewise excited by the report from M. de Morgan of his discoveries in Egypt.
- 9. Section V. (The Far East) A huge rubbing of an inscription in six languages found at Kiu-Yong-Koan, to the north of Peking, was exhibited by M. Chavannes. Dr. J. P. N. Land gave a paper on the music of Java. which seems to shew a curious analogy to the elements from which counterpoint was developed in the West. though the tonal basis is quite different. Dr. Waddell's paper on a Mystery-play of the Tibetan Lamas was read for him, and an importcommunication was made by Prof. Radlov on his discoveries and readings of inscriptions from Central Asia, near Lake Baikal. This paper was the great event of this section of the Congress. Professor Schlegel read a paper, to which ladies were specially invited, on the social position of Chinese women.
- 10. Section VI. (Greece and the East), and Section VII. (Oriental Geography and Ethnology). These sections were not largely attended, nor were the papers read of interest, except to specialists in the subjects dealt with. In neither of them had any of the papers reference to India.
- 11. The Congress was formally closed at 9 a.m. on Wednesday, the 12th September. At the final general meeting several resolutions were adopted, after having passed through the ordeal of the Consultative Committee. Amongst them may be mentioned the resolution regarding the Asôka Inscriptions, and one embodying the results of the labours of the Transliteration Committee. It is hoped that a scheme of transliteration has at length been adopted, which can be accepted in all countries, and by scholars of all nationalities.

G. A. GRIERSON.

NOTES AND QUERIES.

NAMES FOR, AND OFFERINGS TO, THE GODDESS OF SMALL-POX.

Small-pox is popularly known by the name of Sitla meaning "cool," from sit, and as Thandi meaning also "cool." Why should the attribute of coolness be applied to a fever? I may also

1 This may be merely another of the innumerable instances of sympathetic magic. Cool names and cool

point out that cold water and cold food are offered to Sitlå (or Thandi), as the Goddess of Small-pox, at her shrines, but I am not sure that this would explain her name. Why should cool offerings be given her?

GURDVAL SINGH in P. N. and Q. 1883.

offerings are used to induce the demon of heat to become cool. — Ep.]

THE DEVIL WORSHIP OF THE TULUVAS.

FROM THE PAPERS OF THE LATE A. C. BURNELL.

(Continued from page 121.)

BURNELL MSS. No. 15 - continued.

THE STORY OF KOTI AND CHANNAYYA-continued.

THE Balla! made one Sinnappa Naikar sit at the gate to see whether Deyi went happily or in sorrow, when she went to Erajha. She passed by Sinnappa Naikar. She passed by Budi Pamma, and when she passed by Muguli Sanlaya, she began to sigh. Sayina Baidya went running to the bidu of Parimale Ballal, who said: — "There is an ancient bidu built by me, where she may bring forth her child and get well."

"I will not bring forth my child at the bidu built by you," said she.

The Ballal got her a hut and a yard belonging to one Birmana, a tenant of some dry land. He took off his waist-belt of silver, and placed it for her to hold on to.

"By holding this, with one single pain, will you bring forth two children from your womb, and be well. I shall come to give names to your children," said he.

Thus did she bring forth, and the first śatakam was passed, and the second also. And at the time of passing the fifth śatakam, the holy water of the God was brought to her, and she bathed on the fortieth day.

After some days and months were passed, Deyi went to a temple to obtain merit, and offered at the feet of the god an Areca flower and a handful of money.

"Deyî, do you receive sandal and flowers from the god, and bear children," said the priest.

When Deyî returned back, the Ballâl sent a man to her:— "Come to my house! You have already bathed on the fortieth day; therefore you should take your food in my house," said the Ballâl.

"The food which I take at home is yours; and the food which I take in this hut is your also," said she.

When the Ballal came to her house to give her children names, a stool with three legs was placed for him to sit on.

" Do you, Deyt, call your children, as I want to see them," said the Ballal.

Then she went inside and brought out Kôti, who was born first.

"O Deyî, you had better give this child the name Kôţi, that he may endure for ever, like the corner-stone of the temple at Kôţêśvar; and to the second child the name Channayya, that he may endure like the corner-stone at the corner of the temple at Chattiśvar," said the Ballâl. "Keep these children in a cradle and swing it."

Then she went out with some dirty clothes of her children, and cried aloud: — "Râma! alas for the sin of Brahmahatti! Alo! Alo!"

She went to the tank called Padirad Koval and put her children's clothes into the water. She was washing the clothes, bending down, and beating them on a stone, when a leaf of a red cocoanut tree fell on her, which Murka Baidya at Murkotti saw.

Deyî said :- "I cannot live! I cannot live"!

Then Murka Baidya of Murkotti went running to Parimale Ballal, who came himself running, and made her stand up. The Ballal asked her what was the matter.

"I cannot live! I cannot live!" said she, and was taken home, leaning on the other-' shoulders.

Deyî was carried to one Birmana Baidya. When they made Deyî sit down, she saw the people around her and said:—"O men! I am called by the God; so bring my children!"

She looked well at her children and wept bitterly.

- "Why do you weep so bitterly?" asked Parimâle Ballâl.
- "Ballal! Ballal! Pour into my mouth water from a pot with tulasi leaves in it. I leave my body here and enter Kailasa," said she. "Hold up the tulasi plant and pour water into my mouth. I will leave my body here and enter Vaikuntha."

Saying this again and again, she left her body and went away to Kailâsa. She went to Kailâsa first, and then to Vaikuntha. Wood for burning was placed at the burial ground, a mango tree before and a jack tree behind, being cut down. Sixty bundles of sandal-wood were put upon Deyl, and she was burnt with oil and ght. Then her caste-people were called and told to appoint a day for her funeral ceremony. The day was appointed. On the third day after her burning, the ashes were gathered, and on the fourteenth day the funeral ceremony was performed.

"Now, take the children to my bidu," said the Ballal (to his servants).

He reared the children, supplying them with food, a môra of rice, and a piece of thick pachade cloth, and of maudiri. He presented them also with a white silk cloth from Bôlûr, a black silk cloth from Kâlûr, and a girdle, too. He presented them with coats also. After they began to take their meals at the bîdu of the Ballâl they waxed fat.

"It is not enough for us to drink only water, we should live in the world like ornaments of gold," said Kôţi and Channayya. "It is not enough that we walk round the four sides of a kambula, we must live together with our caste-people. We must go to the wars. We have inquired at Adumańja Kôţya about some playmates, and we want to persuade the Ballâl to help us in this matter."

Accordingly they induced him to help them.

"A letter is to be sent by a man to our uncle Sâvina Baidva at Érajha." said they.

A letter was written to him telling him to start at once, without taking a meal or looking to his dress. The letter was carried to Erajha, where it was read, and when it was read, there was found to be written in it, that Sâyina should go to the bidu in a ghalige. Sâyina went to the bidu in a ghalige, and saluted the Ballâl. He sent for the children and said:—

"Send these boys to play as happily as they have been reared carefully up to this time."

So Sâyina took them to Érajha. When he left the bidu, it was known to Éllur Abbe of the Châvadi, and as the children were leaving the bidu Éllur Abbe saw them. She took off her padumäreke girdle of silver and presented it to them. She brought a hat of parrot-colour for Kôṭi Baidya, and a hat of the colour of the puda bird for Channayya. She had them dressed in these, and presented them by her own hand with a dagger called Râma Kengude.

- "Your food is like that of the Baidya, of Edambûr!" said Ellûr Abbe, as she blessed them.
- "O Sâyina! take the children home! Such children as these have never yet been born, nor will be born hereafter."

He took them to Erajha, and made them sit on a swinging cot hung from a rafter.

- "We will go to play, uncle," said the children.
- "Ah, my children! Other children of your age cannot even crawl on the ground upon their bellies. The oil and the ghi on your heads are not dry yet, and the smell of birth is still upon you," said their uncle to them.
- "Our mother died at our birth, and so you make reflections on us and are too plain. Send us to play, or we go, uncle," said they.

And they became quite angry, and went through the gate, and entered the house by a small door. They stood there, touching the walls, and holding the roof of the house, and weeping bitterly. Their uncle's wife, Sayina Baidyati, asked them:— "What is it, I'm he is why do you cry?"

"If we had our mother and father, they would have allowed us to go and play, and come ack," said they.

So their aunt called her husband, and told him to let the children play, and to let them go.

" Let them go and play, and come back," said she.

Then Uncle Sâyina called them, seated them on the swinging cot hing from a rafter, and gave them permission to go and play and come back. In this way he told them to go and play.

"You have told us to go and play, but you have not told us how," said they.

"O my children, you know how to play, but you do not know the toys," said their uncle "Go to the bank of a river, and get round and heavy stones. Go to the bushes and get some palle berries; a basket full of them. Go to the thorny shrubs, and get some kanings berries. Go to the prickly shrubs for kadenjekai berries. Go to the reeds, and get some bundles of this canes. Go to the bell-metal smith, and get some small bells of bell-metal. Go to the black-smith, and get a shield for your dagger, called Râma Kengude."

They got all the toys in three days, which ordinarily required about twelve days to make.

"Toys are ready for the play, uncle! We go to the play, uncle! We go to the play. Listen, Uncle Sâyina!" said they.

They put on their dresses themselves.

"Children, go and play happily," said Sâyina Baidya.

Then they went and asked some boys if they might join in their play.

"We do not tell heroes, who wish to come, to go away. And we do not call to any heroes who are going away! If you like, you may come and play!" said the boys.

Channayya Baidya and the boys played together, and he was beaten by the boys.

- "O boys, please lend me a palle berry and one kaninju!" said Channayya. "No debt is allowed in the play-room. No chunam is to be given even to a brother. There is no defilement in the refuse rice! No interest for two tara," said the boys.
 - "Kôṭi, my brother! do you get me a palle berry and a kaniñja."
- "Brother, will you play with a single palle and a kadenja?" said the brother, and gave him a single palle and a kadenja berry.

In the second game Channayya defeated all the boys.

"Channayya, lend us a palle and a kadenja!" said the boys.

Then Channay a Buidya said:—"'There is no debt in the play-room,' you said to me. That is the beam you have put up and this is the rope we have placed on it," said he.

Channayya tied them all together and left the play-room.

"The heroes, who came to-day, must come to play to-morrow also," said the boys.

Channayya threw stones, round as a ball, at them. A cry was raised, and an outcry of women, too. The boys' mother at Buddyanda's house sent a man across to them saying:—
"Give my boys a palle berry and a qajjiqa."

"We will not give them even a pie found on the road; but if they come to Erajha we will present them with many muras," said Kôţi and Channayya.

She would not listen to this, and made a maid-servant take the berries by violence, beating the boys.

"O maid, though we are young to-day, we shall grow old to-morrow," said they. "O maid, do not raise up envy and quarrels among Billavar boys! You had better keep the berries carefully in a heap. Though we are young to-day, we shall grow old to-morrow. There is a proverb:— 'The body is hurt by a Kannadi snake's touch, and poison is increased by a Nagara snake's bite.'"

They went to Erajha, and then they went and sat there.

- "What is it, children? and how is it that dust is on your caps," asked their uncle. "It is the dust that we had at first. "It is not gone yet," said the elder brother.
 - "O uncle, Buddyanda's wife took away our berries by force and beat us," said Channayva.
 - "You did not listen to my advice," said their nucle.
- "As she took the berries away by force, they belong to her now; but, Uncle Sâyina, where is that which the Ballâl presented to our mother?" asked Kôţi and Channayya.
- "There are two divisions of a kambula at Hanidotti Bail," said Sâyina. "Now you young children! go to the bidu," said he. "The Ballâl has got his face shaved and looks well; but there is hair on our faces. We will not go as we are to see such a handsome face," said they.
- "Children, take pañcholi betel-leaves from a vine on an Areca tree and mundolli from a vine on a Mango tree, dress yourselves with kayeri karpoli cloths, put those betel-leaves into a thick cloth and go to the bidu," said their uncle.
 - "You had better go there, yourself, uncle, and visit the king," said they.

He went to the bidu and saluted the Ballal, standing on lower ground.

- "Come, Sâyina, and sit down," said the Ballâl. "Where are the heroes whom I bred?"
- "The children are not shaved yet. They say that they will not see your handsome face, while theirs are unshaven," said Sâyina.
- "Do you, Sâyina, get the boys shaved immediately," said the Ballál. "Do you get them shaved and get some one to shave their faces well."
 - "Who is to be barber, and where is he to shave them?" asked Sâyina.
- "There is one Siddu Bandari, an aunt's son, at the town of Karmin Sale in the upper countries on the Ghats, and there is another Pernu Bandari, a grandmother's son. These are barbers. Do you write them a letter, Sâyina! and make them come here. Then I will supply them with what they require," said the Ballâl.

Soon after that Sâyina returned to Érajha.

" I want to call all my caste-people, and make them gather at my Erajha," said he.

All of them assembled at Érajha one day and wrote a letter. The letter was sent to the Ghâts by one Bagga.

Bagga asked them: -- "On what day is the barber to come?"

"To-day is Monday. Next Monday he is to come," said they.

When Bagga went to the Ghâts, Parimâle Ballâl sent to Sâyina rice, ghê, and all the other articles necessary for the shaving ceremony. Some days after, i. e., on the next Monday, Siddu Bandâri, the aunt's son, came there and saluted all his and other caste-people, who were collected there.

"Who is that there? Son Bagga! Fan the barber with a fan, and give him a green cocoanut leaf to sit on," said Sâyina.

¹⁸ Le., when we came into the world from our mother's womb.

When the barber sat down, it was time to shave, and the children were scated for having rice sprinkled over them. Then the rice was sprinkled over them, and the children got up. Parnu Bandâri sat down to shave Kôṭi, and Sidda Bandâri to shave Channayya. Mill. was applied to their right sides and water was applied to their left sides.

"Where is a looking glass?" asked Kôti.

A figure of the moon was formed in the middle of the head, and then their faces were shaved. Then they had to bathe in cold water to expinte the sin of touching a barber. They bathed, and dressed themselves. They sat on a beautiful plank. Sandal and turneric powder and rose water were rubbed on them. They were adorned with gold, jewels, and flowers and silk cloths, and lace. That day all their caste-people came and said: — "O children! there are proverbs:—'It is not an earthen pot.' 'No meals with flesh.' 'No relation with a Brâhman.'"

Then the children were sprinkled and got up. They bowed down to their caste-people, who prepared to take their dinner there. They took their food and chewed betel-nut.

"We beg leave of the Ballal to go," said the heroes to their caste-people.

They put on shoes and took umbrellas, and while they were running along the roots of trees touched by their feet were ground into powder, as if by stones, and birds' wings were broken. The heroes went to the Ballâl's bidu, and saluted the Ballâl, standing on lower ground.

- "Heroes! come and sit down," said the Ballâl.
- "The business for which we came comes first; sitting comes next," said the heroes. They said, "Râma! Râma!" and "Brahmâti!" and presented him with what they brought.
 - "Master! where is what you presented to Deyl for our sake?" asked they.
- "There is a field for you, named Kalaya Kari, in which plantain trees are planted, and another, named Punkare, in which flowers are planted, and which is cultivated by one Buddyanda. They are in a large kambula field at Hanidotti Bail, for the cultivation of which you had better arrange with Buddyanda," said the Ballal.
 - . We will go there. Give us permission, sir," said the heroes.
 - "Heroes! chew betel-nut and go home happily," said the Ballal.
- "We will not chew betel-nut before we have ploughed four turns at least in the middle of the field, and before we have sown. Moreover, we will not take our food until then," said they
 - "Then take away the things which you have brought me," said he.
- "We do not take back what we have given! We will have connection only with a pure woman! We will not make friendship with bad company! We do not put our hands into a chump of thistles! We do not chew again betelmut that has been spat out. We do not ascend the châvadi, if once we have come down. We do not see again the Master's face, when once we have seen it. We shew our belly when we come, and shew our back on our return. The remainder is at the beginning of seven battles. We shall see it that day. At that time you will know us," said Kôṭi and Channayya.

They left there what they brought him. They went to the shop of Rama Kamma. They paid him two pice and brought a cocoanut to take to Buddyanda. Buddyanda saw them while they were still at a distance. As soon as he saw them, he concealed himself behind some torn pieces of matting. Kôti and Channayya ascended the chand at once, and called out:— "Buddyanda! Buddyanda!"

"No males are here! No males are here!" answered Buddyanda's wife. "O children! the Ballal has gone to Parimale. He went as an arbitrator to settle an oath between an uncle and a nephew, and between a grand-father and a grandsen in the Upper Country."

Then they put the cocoanut on a bed as a present.

- "Let it go. Though Buddyanda is not here, let us see the five corners of this palace," said they. When they looked into the five corners of the palace they found Buddyanda sating covered over with some torn pieces of matting, hiding himself behind a hollow post.
 - "Buddyanda's wife! What is that in the torn pieces of matting?" asked they.
 - "O children! They are seeds of the months Suggi and Enêl," said she.
 - "Which are of Enêl!" asked Kôţi.
- "Which are of Suggi," asked Channayya. "Let us see whether they are of Suggi or of Enĉi."

He tried with his dagger if it was soft.

"I see both of Enêl and Suggi. Kôți! let us go," said Channayya.

Then the heroes went away.

- "Who are they that put a cocoanut on my heart?" asked Buddyanda, and threw away the
- "Buddyanda, do not do so," said his wife. "It may be useful to you to eat with small cucumbers and with some tender boiled padipé leaves. There are no cocoanuts on the tree and no tenants of the upper fields."

Then they took the cocoanut, broke it, and went away, eating the cocoanut.

Then the heroes went on to Erajha, calling the following persons:— a servant named Kanada Kattire, a Muggera called Iral Kurave, and Bail Bakuda, and ordered them to cut the grass and the sides of the banks of their kambula, to heap some soil to be burnt, and to ecutter some leaves (over the field).

"We know of a good week and day on which to begin the cultivation. Now we want to plough with four yokes and to sow in a corner," they said to each other. "We left three months in the middle, and began to cultivate the kambulu in the month of Sôna. In the month of Sôna we made the servants chop leaves in pieces. We made them plough five times, and harrow nine times. We made them plough in such a way, that there is no difference between the soil and the water. Buddyanda made his servants plough his field nine times and harrow five times; and not even a blade of grass bent?"

When they were passing by Hanidotti Ball, Buddjands almo up to them.

"Where are you going, Buddyanda? My brother wants to know," said Kôṭi. "I am going to the hut of the astrologer Bira Ballya at Matti to ascertain the day for sowing the kambala," said Buddyanda.

"Please, wait a while. I will go to Erajha and bring a comanui," said Channayya.

He went to Erajha. He put a hadder to the apper story and took a cocoanut stored there. In took away the outer shell and folded it in his thick chain. He gave the cocoanut to Buddyanda.

"Buddyanda! when you ask about a day for your kambula, you should ask about a day for the Billavar boys' field," said Channayya.

Buddyanda, soon after the heroes left, broke the cocoanut into pieces and went off, eating them to the house of Bira Ballya at M. tt. When he got there and called to him, Ballâldi, Bira Ballya's wife, answered the call. 'Where is Bally ya gone, Ballâldi?' asked he.

Having told the people of Upper Parmal and the lower untries of the good and the bad, he has come back and taken a bath in both cold and walm water. He has drunk ricewater and now sleeps quietly," answered she.

"O woman! call him," said Buddvauda.

She took water in a beautiful pot and awakened the Ballal, her husband. He rose and stood up at once.

- "Wife, why did you awake me?" asked he, and came out.
- "Master! Buddyanda! why did you make my wife call me?" asked he.
- "Bîra Malya (Ballya) of Matti! you must refer to the praina-book and tell me a day for sowing my kambula," he said.

The astrologer brought a bench for Buddyanda to sit on. He brought sixty handfuls of jútakams, and thirty handfuls of granthams. He brought balls of gold and silver wires.

And then Bira Malya of Matti said:—" I want to tell you a sure hour, which I shall find with the help of a true star. Therefore you must give me a handful of money."

As soon as he gave it, Balyaya said:—"Buddyanda! on Tuesday, early in the morning, let the bullocks and men go down to the kambula. Shall I finish this, Buddyanda?"

- "Do you, Balyâya, seek a day for the Billavars too," said Buddyamla.
- "For one kambula only the same day and hour is fixed. There is no separate week or day," said Bîra Balyâya of Matti.
 - "I go, Balyâya," said Buddyanda; and went to his village.
 - "Have you ascertained a day for the kambula?" asked Channayva.
- "Tuesday is fixed for my kambula and the Tuesday following for yours," said Buddyanda.
- "Brother Kôţi! two weeks and two days cannot be fixed for kambula. Let us begin this week," said Channayya. "We should call for bullocks and labourers. Let us go."

While Channayya was going in the upper country of Parimal, calling his tenants, Buddyanda was going about in the lower country calling his tenants. There were a few tenants who had four oxen in that village, but there were many tenants who had two oxen only.

- "If you have separate kambulas, to whom we are to send oxen?" said the villagers to Buddyanda.
- "Leave the Billavars' kambula, you people, and send the oxen to my kambula!" said Buddyanda.

But Chaunayya said:—"Buddyanda has only one kambula, and we also have only one kambula, but there are two weeks fixed; therefore, you people, may send him the oxen first."

Buddyanda and Channayya met together.

- "Take care! Chaunayya! Take care! Do not you plough the kambula on the same day in that village," said Buddyanda.
- "What is this foolishness of Buddyanda, who is like a pig? I shall make some one trample on you," said Channayya.

Four yoke of exen went to the kambula of the heroes, but to Buddyanda's kambula went only one yoke of exen. The water and mud of the heroes' kambula were mixed together, while, in Buddyanda's kambula, the water became in one corner clear, while the other corner was being ploughed. Then a yoke of exen, and a man, named Yelltura Kurenda, were sent by the heroes to Buddyanda. Though they were called by Kôti and Channayya, they sent them to Buddyanda's kambula. Buddyanda beat them badly, untied the exen and drove them away from the kambula.

"They are begged oxen and the man is a cooly. If you are envious of ma, let us try together. Do not want for oxen and a man?" said Baddyanda.

Buddyanda ploughed and sowed his kambula and returned to his kidu. The heroes having ploughed and sown their kambula went back to Érajha. The charitable heroes gave to each of those, who had ploughed with buffaloes, three sérs of rice and a leaf full of boiled rice. They gave to each, who had ploughed, over two sérs of rice, and a leaf full of boiled rice. They presented all the villagers with oil to rub on themselves. They passed through the bidu of Baddyanda, and Buddyanda sent the villagers, who had ploughed for him, to the door of the heroes.

"It is your turn to-morrow to go to the kambula at Hanidotti. Our paddy field requires much water. The soil of it will crack, even in the moonlight. Then the dry grass can neither be cut with a sickle, nor be plucked by the hand. Therefore, brother, shall you go or I?" asked the younger brother.

"You, Channayya, are cruel! Anger and strife may happen between you and the foolish Buddyanda. Our caste occupation is to extract târî. Do you, Channayya, attend to that business," said Kôli.

Channayya went to a forest called Sanka Mate to draw toddy from the trees.

"Then I shall go to Hanidotti," said Kôti.

Kôṭi Baidya took a thick coloured cloth and sufficient seeds, and he took also a harrow, which had been worn by being used on a field producing sixty muras of rice. Then Buddyanda let in the water and filled the heroes' fields.

"Aho, Buddyanda! there is no water that I can see in your kambula for even a goose to sit in on the mud heaps, and for a frog to sit in in the holes. But our kumbula is like the sea of Rama Samudram," said Kôţi Baidya. "Although there are a thousand men and women to take their food at Erajha, we have also to take our food at our Erajha. Therefore, Buddyanda how much can I endure? If it had been my brother that was here, the result of the ploughing would have reached to one and a half, while it will now be only one," said Kôṭi.

"You praise your brother. Has he conquered the land, hunting a large tiger? Has he been presented with a ser of gold rings for having killed a tiger? Has he been covered with peacock's feathers? Has he fought a battle, riding on a noseless horse? Has he put the sky above the earth?" said Buddyanda.

While Kôṭi and Buddyanda were thus disputing, Channayya heard them with his ears and said:—" What is this, Kôṭi? Buddyanda's voice is heard for a long distance, but yours only for a short distance."

"Brother! look at Buddyanda's kambula, and brother, look at ours!" said Kôți.

Channayya Baidya never stopped running till he reached Érajha, got his dagger of steel, rubbed it over with a powder of white stones, made it sharp and came back. When he came back, Buddyanda was sitting on a verandah by a coccount tree at Ajamanja Kötya. Channayya bowed down to him and said:—

"I saluted a kayêrî tree, growing on a hill! What do you see, brother Kôţi? Let one of my salutations be for the god Nârâyana on high. Let the other one be for Bhûmî Dêvî, And let the last one be for the seventy-seven karôṛs of gods! Now what do you see, Kôṭi? Tie the bow with a string."

They cut one of the banks of Buddyanda's kambula and let the water off. Then Buddyanda took a harrow and came to drive them off.

Then said Channayya :- "What do you see, brother?"

They took a log out of the water and beat him, until his joints were broken. They took a green leaf of a cocoanut and beat him, till his bones were broken. They took a bundle of small turi-mulla thistles and beat him, till his face was wounded. They took an arrow, and plunged it into his breast. They took his body, holding his hands and legs, and put it north

and south, on a broad bank in his kambula. They tore his thick cloth, and tied his trees with it. They took three harrow-loads of soil and said: —

"The three harrow-loads of soil are three hundred cakes for your supper. Three harrow-loads of soil out of our kambula put on your heart are for sandal to rub on you."

Afterwards they dressed up at Padumakatte a harrow and made it like Buddyanda. Then they went to Buddyanda's bidu, and called: — "Woman! Woman."

His wife heard the second call, and answered the third call.

- "Who is it that called," asked she.
- "No one, but we heroes!" said they.
- "Why do you children come here, who have not come up to this time? You, who have never spoken to me? You, who were against my husband, as if he were a Nâga or a Kandodi? Who induced you to be friendly? O Râma! Râma! Brahmâti!" said she.
- "O woman! wise people of Upper Parmal and Brihmanas of the lower country reconciled us. With one flower and nut we have healed the ill-will between us. We have become friends."
 - "If you are heroes who are not envious, you will pass by the bidu," said she.
- "Woman! Buddyanda was tired by the morning sun, and the moisture in his throat was dried up. Therefore he wants you to take him milk in a small tumbler, water in a jug, and betel-nut on a plate," said they.
- "I shall take them, children! You, who have never yet come, have come here! The day has come near for me to leave off wearing my nose jewel, and my kariya mani necklace. For your meal at the master's house there are boiled rice in an earthen jar, curds in a basket, pickles in a wooden vessel, five hundred sorts of curries prepared with curds and three hundred kinds of curries with tamarind, and a thousand curries with cocoanut," said she.
- "Râma! Râma! Brahmâti! Woman, hear us! We came here, having finished our meal of boiled rice-water. We take our meals twice a day, but not thrice," said they.
- "So let it be, children! If you will not take your dinner, there is betel-nut of your master's to chew!" said she. "Where is that girl? O Jaina girl, give the heroes betel-nut into their hand."
- "Girl, have you experienced wisdom in the heart, pain of the back, and knowledge of the world?" asked Channayya. When she brought betel-nut, the younger took it in his hand.
- "Woman! we have taken betel-nut," said they, and called out again:—"O woman, where are those muras of palls berries, the small murs of kadenja berries, and the bundle of canes, which were taken from us by force in our childhood?" asked they.

She began to think, and said: — "They are upstairs by my bath-room, children! take them!"

The younger brother Chaunayya took his Râma Kengude dagger, struck the muras with it and took them away. Then they passed by the border of the yard, and by a small opening closed with two sticks across it.

"Woman! we have taken your betel-nut. We have put in this stick fastened here," said they.

Then the woman said :- "Is there any remainder, herees? or is it finished?"

"If Buddyanda is finished, you will burn yourselves, but if he remains, we shall give him blows," said Kôţi and Channayya.

The children went onwards and sat by the way at Uddanda Buttu. Buddyauda's wife took milk in a small tumbler and made a maid take a jug of water, and on the road to Handyottu Bâil she saw blood flowing into a small drain.

- "Oh my maid! this must be the water that my husband spat out when chewing betelnut," said she.
 - "This is not water spat out after chewing betel-nut, but blood," said the maids.

When they had passed on a little, they saw a harrow¹¹ dressed up. As soon as Buddyanda's wife saw the harrow dressed up, she began to cry out and beat her head. The inhabitants of Upper Parimâl and Brâhmanas of the lower country came running when they heard her crying out.

"You men who have come running, what do you see of my beauty?" said Buddyanda's wife. "You men hold the dead body by its hands and legs, and put it south and north on a bank of the kumbula."

They took it, holding the legs and hands, and put it on the bank of the kambula.

- "Let a nose-jewel and a neck-jewel, too, be on the heroes' breasts." said she.
- "You break them on your husband's bosom when you are married, but why do you break them for our sake?" asked the heroes.

They saw the beauty of Buddyanda's wife, as they went to Erajha. When they reached Erajha, they sat on the swinging cot, and Sâyina, their uncle, came to them.

- "What is that stain, children, on your faces?" asked he.
- "It is the stain that we had, when we were brought out from our mother's womb," said $K\hat{o}_{ti}$.
 - "Buddyanda came forward and we killed him," said Channayya.
- "When I reared you with a handful of rice during my life time, I hoped you would burn me into five sers of ashes, when I died," said their uncle.
 - "Where is a present for us, uncle?" asked they.
- "O children! go to the Édambûr Châvadi, and get a present in addition to the former one, such as sallabéjá and sattánéjá," said Sâyina.

They went to the Ballal and said to him:—"On the north part of your house there is a paddy field producing three hundred muras of rice, and sowing three sers (of paddy). Please, give us that field."

- "The produce of that field is for Government taxes. Do not ask for it! Ask for another, children!" said the Ballâl.
- "There is a paddy field to the south of the bidu producing five hundred muras of rice, and sowing five sers of paddy. Please, give us that one," said they.
- "The produce of that is be used for the servants of my house. Therefore, heroes, ask for another present," said he.
- "In the south of the house there is a jack tree. One of its branches produces soft jack fruits and another branch produces hard fruits. Please, give us that tree."
- "Those are the fruits that the children of the house eat publicly. Ask for something else, heroes!" said he.
 - "There are a harrow and a pickaxe, called Râma Lachana. Give us them," said they.
- "I have dry grounds, sowing sixty muras of paddy, banks which burst, and walls which fall down. Therefore, I want that harrow and pickaxe," said he.
- "On a round verandah, called Padma Katië, at your palace, there is a red coccanut. One bunch produces an earthen jar full of tari, and the other shoot produces a thousand coccanuts. Give us that!"

The state of the s

- "That tree is for the cocoanuts and oil used for the people of the house. Therefore, I cannot give you it," said he.
- "Let it be, if you cannot give us that tree. There are five large she-buffalces. Plance, give us them at least," asked the heroes.
- "O heroes, there are four mothers in my palace. You have asked to-day for the she-buffaloes, and you will ask for the mothers, too, to-morrow," said the Ballal.
- "We will never set our feet in the land, where sons are married to their mothers! We will not drink water there," said they, and went to a distance of four feet.

At this time a letter from Sayina about the murder of Buddyanda was brought in through the small door. The Ballal read the letter, and sent a man for the heroes.

"A thousand of such as Buddyanda can be found hereafter, but heroes like these cannot be found again. I will give them my palace. I will give them my land. Let the heroes come back!" said he, and gave them a letter.

They saw the letter, made answer and said: - "We went back from you and will never return again."

Then they went on to the hut of Hinkiri Banar, and said: — "Where are the one-pointed iron nails and the two-pointed iron instrument? They were given to you to repair? Where are the handle of heruva, and the plough of banga?"

"What is it, that the heroes say?" said Hinkiri of his wife. "They are not even so wise as to cease taking their meals at Parimal. I will pierce their breasts with the handle of herwa, the plough of banga, the one-pointed nail and the two-pointed tapering instrument."

"Brother, does the plough come on the heart, when it passes over the fields? He is a wise man. I shall ask him again and return. Brother, do you go on," said Channayya.

Channayya made him go three times round his hut, and pierced his breast with the dagger, and the men and women made an outcry. The neighbours came running up, and asked:—
"What is the outcry about?"

"The blacksmith tried an impossible work, when a spark of fire flew out and the hut was burnt," said the younger brother.

They went on further, and then to one Balu, the washerman. They called out to the washerman and said:— "We have given you dirty clothes; have you washed and returned them?"

"No," said Balu the washerman.

They speared Balu the washerman, and went on further, and came to one Sanku, the oil-maker.

"Where is Sanku the oil-maker? We have given him a kalase of oil-seeds. Where is one-fourth of the mund of oil?" asked they.

"I do not know, heroes! you have given and I have taken it," said he.

They speared Sanku the oil-maker, and went on to one Abbu, the potter.

"We have given you a kalast of paddy, where are small and large earthen versels?" asked they.

He shewed them a broken pot and told them to take it away. They stabled Abbu the potter with their dagger.

"So have we killed Abba. Now let us go to the toll gate!" said they.

Dêrê, the toll-taker, saw them from a distance, and came down from his verandah and ran away, but they waited for Dêrê, till his return. They saw him coming from a distance.

and started onwards, and said: — "Who is that going along? Is he a Sambhôg? A son of a Jaina Sêţţi? Is he a Baraga, the son of a Bant?"

- " No matter who you are, you must pay the daily toll at Banga's verandah," said Dêrê.
- "Why do you ask toll, Dêrê? Have we loads on our heads, Dêrê? Have we loads on our backs, Dêrê? Do men or women follow us, Dêrê?" asked they.
 - "The toll is for your dagger of steel, which you have on." said Dêrê.
- "No one has ever taken toll from us in the whole world up to this day, not even from the creation of the sun and the moon," said they.
- "Brother! Dêrê has good sense. I will ask him the remaining questions and follow you," said Channayya.

Then he stabbed Dêrê in the breast. Dêrê vomited blood and white rice. Then Channayya put three coins on his breast and said: — "Take toll from every body going along the road."

They went to a shed for water, and asked the Brâhmana: — "Holy one, have you pure water?"

"I have water, but I have only three cups in my house. One is used for giving water in the hot season to kings and great people, and a second one is for Brâhmaṇas. But, children! there is a small spout of bell-metal. Shall I pour water out of it?" said he.

"We do not drink water from a spout, in which people of twelve religions and one hundred castes have drunk," said they.

Kôti held out his dagger's point, on which the Brâhmana poured water, and drank water through the handle.

"Oh! Brother, you have drunk water and rested. How can I drink water?" asked Channayya.

The Brâhmana gazed at Channayya's face, and when he saw the red eyes, the brown hair on his face, the mustaches bent like a horn, and his breast, the Brâhmana was attacked by a devil that can never be routed. His hands were drawn back of themselves as if he were pouring out water, and then the water went suddenly up to his head and he became senseless. Then Kôṭi asked of the people: — "Is this water put here by yourselves or by the permission of the king?"

The younger brother knew what to do. He stood up at once and began dragging away the Brâhmaṇa.

Then Kôti said: — "Do not go, brother! Do not go. If you think two ways of the Brâhmana, you will become a sinner that has killed a red cow at Kâśî. If you do not heed my advice and go any further, you will become as a sinner that has killed me. If you disregard this advice, you will have committed seventy-seven karors of sins." Channayya was not the brother to disregard Kôṭi's advice.

"O Brother! I will give you an oracle. If it is useless, treat it as useless; and if it is good, treat it as good," said the Brahmana.

He brought sixty handfuls of játakams and thirty handfuls of granthams. He brought golden balls and wires of silver, and put them on a plank of white kadrôli, and he also shed tears.

- "Do not try on any injustice: tell the truth now, putting down a handful of the balls," said Channayya.
- "At Nelli and at Savalandadka enemies with swords are waiting both on the trees and on the ground. A little further on a berry with a white stone will fall on Channayya's hat, and if you go on further, you will see a woman named Kantakke, who is selling Areca-nut," said the astrologer. "O Channayya and Kôţi, let me fold up the wires."

"Do you, Brâhmana, perform pûja to your tables, and we now pay your charges," so it the brothers, and gave him nine payodas. "Do you, Brahmana, think to yourself that these nine payodas are equal to nine lûkhs of rupees!"

Then they proceeded further and saw Kantakke selling Areca-nuts.

- "O mother Kantakke! put the basket of nuts aside!" said they.
- "Do you remember the Edambûr Baidyas, who give rice at interest, and money at interest?" said they.

They went on. At Savalandâdka a berry with a white stone fell into Channayya's hat, and so he made five hundred berries fall down with the point of his dagger, and with the handle of it three hundred more. They appeared like diamond flies at Nelli and Savalandâdka. When the people at Nelli and Savalandâdka asked about this wonder and enchantment, they saw the brave heroes. Some of them ran away as soon as they saw them, and ran up hills, and he who could not run bit the grass.

"Is not he, who has flown away, a bird? Let him be an army! Now let us go on further," said they.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., I.C.S.

(Continued from p. 182.)

Clothes. - Cloth and clothes, the guardians against cold, ward off spirit-attacks. So. according to the Rds Málá, a dark cloth is an amulet against the evil eye. 57 A Hindu mother with a young child, passing a haunted place, draws her robe over the child. At the time of teaching the Chitpavan boy the sacred Gayatri, or Sun-hymn, his hands are tied in a cloth and covered by his father's hand, and both the father and the boy are covered with a cloth. 58 Similarly, in one part of the wedding service, the Chitpavan bride has her head covered with a piece of broad cloth. 59 Gujarât Srâvaks draw a cloth over the cooking place and drinking vessels. 50 Gujarat Musalmans believe that black indigo, cloth and black cetton threads keep off spirits. 61 Gujarat Hindus, when settling a bargain, put their hands under a mantle. The Dekhan Ramôsis tie the ends of the bride and bridegroom's robes to a cloth, which four men of the family hold over them.63 Among the Uchlias, or pick-pockets, of Poons, when a girl comes of age, five half cocoanuts, five dry dates, turmeric roots, betel-nuts and rice and a bodice-cloth are put in her lap. 44 At a Dekhan Kûnbi's death, before the body is taken out of the house, the chief mourner is given a piece of cloth to tie round his chest,65 and, at the wedding of an Ahmednagar Kôlî, pieces of bodice-cloth are put on stick ends, instead of flags, and they are held round the bridegroom.66 The Jingars of Poons, on the fifth day after a birth, roll the child from head to foot in cloth, and lay it on the ground. The dead Dhrava Prabhu of Poona is laid on a white woollen cloth.68 Among the Dekhan Patane Prabhus, at their threadgirding, the boy is rolled in a sheet, lifted by his mother's uncle, and taken into the purch. When the gurd, or religious teacher, of the Dekhan Mhars, initiates a child, he covers himself and the child with a blanket or a cloth, or a curtain is held between him and the rest of the people, 70 The Kôragar women of South Kânara continue to wear the leaf-aprons they used to

wear when they had no other clothing. The Dhôrs of Poona put a face-cloth on the dead. The Belgaum Kômtîs, at their weddings, stretch a three-cornered cloth in front of the boy's house, and at a rich Mudliar's funeral a cloth is spread for the procession to walk on. When a high-caste Dhârwâr girl comes of age, a washerman is called. He folds a cloth, draws coloured lines on it, spreads it in the makhar, or wooden frame, and the girl is made to sit on it. The Bîjâpur Brâhmans, when a child is being named, apparently to keep spirits off the mother as that would affect the child, set her standing on a wooden stool with a cap on her head and with shoes on. A cloth is held between the bride and bridegroom in the Bijâpur Ghisâdî's wedding procession. A cloth is held between the bride and bridegroom in the Bijâpur Ghisâdî's wedding procession. Among the Marâthâ Gavandîs of Shôlâpur, the chief mourner ties a piece of cloth across his shoulder and chest. When a Kânara Havig Brâhman teaches a son the Gáyatri, or Sun-hymn, he covers himself and the boy with a cloth. Among the Roman Catholics of Kânara, at their Baptism, the priest draws the end of his stole over the child's face, when he takes it into the church. When a Beni-Isrâ'îl babe is being circumcised, his father sits, praying, covered with a veil.

Among the Bengal Khârwârs women dance doubly veiled. So In the Brâhman marriage, in Bengal, Brihaspati, or the gods' teacher, is called on to guard children till they wear clothes. In Bengal, when a buffalo is sacrificed to Durgâ, a cloth is laid on its back. Cloves used to be worn by Pârsî women in their monthly sickness, so and most Pârsî women cover their hair with a piece of cloth. Musalmân women in Turkistân wear thick, dark, horse-hair veils.

A Burman, when attacked with cholera has a cloth thrown over his face. Ss In China, strips of cloth and paper are used to drive away spirits, so and a strip of white or yellow cloth is sometimes hung at the end of streets to keep off spirits. So Before 1868, the Japanese emperor used never to leave his palace or be seen. If he walked, as he rarely did, cloths were spread to keep him from touching the earth. The Shinto god at Mishima is a pole with bits of paper or rags fastened to it. Across the archway of the Shinto temple of Ise, in Japan, a simple white cloth or curtain hangs.

The Nicobar people keep off spirits by putting up a screen made of pieces of cloth, which hides from their baneful sight the place where the houses stand. The Papuan mother covers her child with leaves when any stranger Tocks at it. The emperor of Uganda, in East Africa, has crimson and white standards. The disease spirit in Central Africa is put into a rag and carried to some tree, and there laid by nailing it into the tree-stem. Rag-trees are no specialty of Central Africa. They are common in India, Persia, Ethiopia, America, and Western Europe.

In Russia, to get rid of an ague, make a rag doll, whisper words into it, and throw it somewhere where it will be noticed. Whoever picks up the rag will pick up the ague.99

The Russian babe's cradle is hung round with a curtain of dark print or silk, apparently to keep off the evileye. Formsely nurses were more afraid of the evilege, and used to draw the cartain close round the babe. 100 The Communion cloth is sacred in Russia. Laymen and the lowest order of the clergy may not touch it. No church can be consecrated without its cloth. Formerly, at a Swedish wedding, the bride and bridegroom sat under a canopy.2 The Russian Czar goes to be crowned under a canopy of eagles, cloth of gold and ostrich feathers.3 In the Russian Church a curtain or veil is drawn between the body of the church and the altar.4 At the mysteries of the Cabiri candidates were given a girdle, which they were like an apron, as an amulet to keep off danger.5 The mason wears a white leather apron; the Persians in the mysteries of Mithra, and also the Jewish priest, were an apron coloured blue, purple, and scarlet.6 The Germans put a right shirt sleeve, or a left stocking, in a cradle of an unhaptised babe to keep off Nickert;7 and it is a German belief that, if you find a treasure, you should either throw bread over it, or a piece of clothing that has been worn next the skin.8 In Germany, there was a belief that if a shirt is spun and stitched by a maiden who has kept silence for seven years, it not only undoes charms, but makes the wearer spell-proof and victorious. Dreams are driven away by wearing a nightcap, because dreams are caused by the cold driving the blood to the brain.10 Saint Teresa of Spain (1540) was presented by the Virgin with an invisible cope, which guarded her from sin.11 The guardian virtue of cloth seems to be the origin of the Scotch and French belief, that the child born with a caul (a veil or holy hood) will be lucky. 12 Compare the Roman Cutholic scapulaire "two bits of cloth, an inch and a half square, which they join at the corners with tapes, throw them over their heads, and make one end lie on the breast and the other on the back."13 On State occasions, a silk cauppy is carried over the Pope.14 From a time of which no memory remains, a canopy of cloth of gold or purple silk, with a gilt bell at each corner, has been carried over the king and queen of England on the coronation day.16 After the king of England is anoiuted on the chest, between the shoulders, and on the arms, palms and head, he is arrayed in his robes, a cap is put on his head and gloves on his hands.16 After being anointed, Richard I. had his head covered with a linen cloth, 17 Cloth gives power over spirits. Compare the invisible coat and Prospero's magic garment. The Anglo-Saxons held a care-cloth over the bride and bridegroom. 18 Cloth, like other sparers, is also either a spirit-prison or a spirit-home. This explains the invisible-making coat of Middle Age legends and Prospero's magic garment, 19 the hiding and other magical properties being due to the dwelling in the cloth of some charmed spirit. So the sense of the practice in North-West Scotland and elsewhere of covering bushes near boly wells with pieces of cloth nailed on by patients is that the disease-spirit is prisoned by the guardian spirit of the well. The English sovereign on the day of coronation walks on cloth from the door of Westminster Hall to the Abbey. If clothes are offered to a Brownie or working spirit, or to a Devonshire Pixie, they fly away.21 On St. Agnes's Eve, North England girls lay their stockings and garters cross-wise.22 A cure for boils is to lay the poultice-cloth in a coffin with a dead body.23 In England, it was believed that to lay part of the father's clothes over a girl's body and a petticoat over a boy, was to ensure them favour with the opposite sex.24 So a girl's spell for procuring a sight of her future husband, is to wash her sash and lay it on a chair, to roll the left garter round the right stocking, or to lay a pair of garters across at the

Colours. — Spirits seem to hold in special dread the three colours, yellow, red and black, and perhaps white.

Yellow. — For six days before the wedding the Indian Musalman bride wears old tattered vellow clothes. The admitted object of the practice is to drive away the spirits or jinns that hover round the bride and bridegroom. So when a wife prepares to meet a long absent husband she dresses in yellow from head to foot. A North-Indian Hindi song runs: "Her husband returns at eve, the fair one makes ready to meet him with yellow saffron on her brow, with a golden ring in her nose, with a garland of yellow gold hung round her neck. Golden, too, is her vestment and yellow sandal shines on her body. Ripe vellow ván she chews. The dear one makes herself yellow to meet her lord."28 Among Gujarat Musalmans the marriage turmeric-rubbing, pithi-lagáná, is confessedly with the object of keeping off evil spirits, with whose presence the wedding-day air is so heavy-laden as to give rise to the proverb: - "Shádî kû wakht bada bharî wakht hai. The time of marriage is a very heavy time." To silence any possible grumble of the bride:- "Of what use is this yellow-paste rubbing," the elders are primed with stories :-- "Khudâ Bakhsh, the Paidhônî weaver, had his wedding-day close at hand. Hîrâ his bride was at her house. The pithi, or turmeric paste, was ready. The time of rubbing it on had come. The bride missed her nosering. She was allowed by mistake to go herself to fetch it. She found the ring and came back. When the rubbing on of the paste began, almost at the very sight of the paste, she fell into convulsions. For two or three days the fits came back at intervals. Her mother heard of a good exorcist and took Hîrâ to see him. The power of the exorcist forced the spirit in the girl to speak. 'I am the spirit of a Sidi,' he said. 'I am a gnome half a span high. I saw this girl when she went for the nose-ring. I liked her. I noticed neither yellow clothes nor yellow paste to keep me off. I took possession of her." "Yes," says another of the elder ladies, "and Miriam Hasan of Mahim, with her new ideas, was looking about her just before the paste was put on. She fell in a fit. She had looked into the tamarind tree in front of the house and the jinn who lived in the tamarind tree had seen her looking and took possession of her. It was long before they could get the jinn to confess and leave her " During the spirit laden days of Dasara or Dîwâlî no careful Musalmân mother lets a child out of doors without a yellow lemon in his pocket. A Bombay inspector, a Sûrat Musalmân, going his rounds after dark on Diwalt eve, felt something bob against his legs. He tried with his hand and found that the dear house-mother had dropped a lemon into each tail-pocket. Most Hindus of Western India make yellow the bodies of the bride and bridegroom by rubbing them with turmeric. Among most high-class Hindus the bride's cloth, or vadhuvastra, is always yellow, and the kankans, or marriage wristlets, tied round the wrists of the bride and bridegroom have generally inside of them a piece of turmeric root and a betel-nut. Before a thread-girding, the Brahman boy is rubbed with yellow, and among several classes, when a girl comes of age, she is covered with yellow clothes, or is rubbed with turmeric. That it is the yellow colour, not the turmeric, that is valued, is shewn by the fact that several classes use yellow earth instead of turmeric. The Vaishnava use of yellow earth, known as gopi-chandan, or milk-maid's sandalwood, seems based on the belief that yellow scares spirits. That this is not because yellow is a festive colour, is proved by the practice of marking the face and chest of the dead with lines of yellow. The explanation that the object is to drive away spirits is supported by the belief among some Hindus that spirits fear yellow. When they re-thatch their houses at the beginning of the rains, the Maratha Hindus of the Könkan give the thatcher a bundle of cloth, in which are tied turmenic, marking nuts, an iron nail, and rice, to lay on the roof peak or ridge, that the

²⁵ Henderson's Folk-Lore, pp. 101, 102.

²⁸ Information from Mr. Fazl Lutfullah,

lightning may see them and flee. In the Könkan, some Hindu mothers in child-hed tie a piece of turmeric round their neck to keep off evil spirits, and continue to wear it for a year.29 At a Dekhan Kunbi's wedding yellow lines are drawn on the cloth, which is held between the boy and the girl,30 and at a Dekhan Râmôst's wedding yellow rice is thrown over the bride and bridegroom. SI Kanara Lingayats tie turmeric roots round the wrists of the bride and bridegroom.32 In Sholapur, Komti women, rub their faces with turn-eric powder.33 In Kânara, Havig Brâhman women, when in full dress, colour with turnieric paste the parts of the body which remain uncovered.34 In the Karnatak, among the Madhava Brahmans, before marriage and thread-girding, the chief relations are rubbed with turmcric and bathed in warm water.35 The Khônds gird their head-man with a necklace of vellow thread,36 and they bind a vellow thread round the bride and bridegroom's necks and sprinkle their faces with turmeric.37 The Hos and Mundas of South-West Bengal amoint the dead with oil and turmeric.38 The Gonds tie a yellow thread round the wrist of the bride and bridegroom.39 On the fifth day after a birth the Gonds call women and rub them with turmeric. The Hindu sannyast wears yellow clothes.41 Among fire-worshipping Persians a yellow dog with four eye-like spots, or a white dog with yellow ears drives off the pollution spirit.42 The Persians held gold to be the purest metal; one washing cleaned a gold dish, a silver dish wanted six.43 Burman women, and some Burman men, rub a sweet straw-coloured powder on their cheeks.44 Among the Malays, no one but the king may wear yellow.45 The road along which the emperor of China passes in bridal procession is covered with yellow cloths.46 The Lama of Thibet wears a long vellowish robe.47 At the spring-ploughing festival in China, a husbandman wearing a yellow court goes before the plough.48 In China, when a person is sick with headache or fever, the enchanter writes with a red pencil on a yellow paper, burns the paper and gives the askes to the sick man to drink.49 At a Buddhist funeral in Japan, women in mourning wear yellow clothes.59 In the Fiji Islands, vermilion and turmeric are rubbed on the faces and bosoms of wives, who are killed to accompany their dead husbands, 51 The people of Melville Island daub themselves with vellow.52 The Wagogos of East Africa wear yellow wristlets of goat skin to keep off spirits.53 The Mexicans stained the successful warrior yellow, 44 and at Mexican festivals the people painted their faces yellow.55 Greek virgins, at the fifth yearly sacrifice to Piana, were yellow gowns. though, with this exception, to wear any coloured dress at a festival was against the law. 56 In Greece pills made of yellow silk and live spiders are believed to cure ague. 57 The pedestal of the Guardian of Ulster in Ireland was a golden yellow stone. In Middle Age England gold rings were worn to cure patients suffering from the attacks of evil spirits.54

Red. — On almost all great Hindu occasions red or vermilion, kuiku, is used along with yellow turmeric. Hindu women, whose husbands are alive, mark their brows with red powder. In Thânâ, when a high-class Hindu woman goes to visit a neighbour, at the close of her visit her brow is marked with red. In the Dekhan, the Chitpâvan bridegroom's face is marked with black and red. The Poona Uchlias, in preparing the oil for the ordeal caldron, paint

and and vellow both the oil-mill and the bullock that works it. 22 Dekhan Râmôsis rub the bridegroom's foot with red powder,63 and Gujarât Muhammadans, when the bride enters her busband's house for the first time, kill a goat, and mark the soles of the bride's feet with its blood 64 In Poons, at a wedding dinner, the place for each guest is marked with lines of red powder 65 At a Dekhan Kunhî's wedding, when the boy is seated outside of the girl's house, Brâhmans draw red lines on the walls.66 Some Dekhan Kunbis paint gaudy pictures and stripes of colour on their houses to keep off the evil eye.67 The dome of the Tarkeswar temple at Nasik is coloured red and white.08 The Komtis of Shôlapur, on the fifth day after a birth, wash the cot, and paint it with red and white lines.69 In the Karnatak, all clothes given away as presents are rubbed with red powder. Some Belgaum Brahmans have their houses painted with alternate stripes of white and red. 70 In Nagar, the pile of pots at the corners of the square. in which Gujarât Brâhmans are married, are striped red and white.71 The Bedars, or Biadars, of Dharwar smear their bodies with red, white and yellow earth.72 The Gavandis of Bijapur throw red-coloured rice over the bride and bridegroom.73 The Beni-Isrâ'îls of Western India redden the bridegroom's hands and feet with henna.74 At Malêr marriages the bridegroom marks the bride's brow with red. 75 Among the Gonds, at the Pôlâ festival, the bullocks and drivers are covered with red,76 and this reddening is part of the Pôlâ festival in many parts of Western India. ()n the sixth day after a birth the Gonds mark the ground with vermilion.77 Red powder is perpetually thrown at Good weddings.78 In Bengal, as in Bombay and other parts of India, on the Phâlgun fullmoon,79 the Hindus drench each other with red water.80 The village stones, or kirnkalla, of Mysore, are painted in vertical lines red and white. The Ganapatias, a sect of Hindus, mark their brows with red minium.82 Formerly in Burma,83 no one but the king could use vermilion. Similarly, when a Burman prince was executed, he was tied in a red velvet bag and drowned in a river.84 Red cloth is used at Chinese weddings.85 Children in China, at the festival of Middle Heaven, have their foreheads and navels marked with vermilion to keep off evil spirits.86 In the Andaman Islands, upla, or red oxide of iron, mixed with the fat of pigs or turtles, is applied to the body as an ornament or to cure disease.87 Some tribes in North Australia cover themselves with red earth. 88 The Melville islanders, when in mourning, paint their bodies red or white.99 Hottentot women mark sacred stones and cairns with red ochre.90 In Madagascar, Hova women stain their nails red.91 The Gallas of East Africa anoint themselves with oil and red ochre. 22 The Bongos of the White Nile apply red ochre to wounds as reducent and antiseptic.93 Red and yellow are the great colours at the Dahomey court.94 In South Africa, the chief's wife covers herself with oil and red ochre,95 Dr. Livingstone noticed in South Africa an idol with marks of red ochre and white pipe clay.96 Some tribes in South Africa smear themselves with fat and ochre to keep out the influence of the sun by day and of cold by night.97 The Muhammadan women of North-West Africa stain their hands and feet red with henna.98 The Dakotas of

America paint the dead with vermilion or red earth. Mexican warriors smeared their bodies with bright paint. Greek girls had their toe and finger nails rose-tipped to keep spirits from coming in. 1

Black. - Spirits fear black, particularly lamp-black. Hindu women commonly use lamp-black to anoint their eyes and lamp-black is sometimes applied to cure itch.3 When a Hindu woman takes a young child out of doors, she marks its cheeks with lamp-black to keep off the Evil Eve. The Vaishman marks his brow with an up-and-down line of lamp-black, or angar, as a guard against spirits. The black marks in tattooing are admitted by Gujarat Bhils to have the power of scaring spirits, and it seems to be its power of marking black that gives its holiness to the marking-nut. The special value of jet as an ornament seems to have been due to its power over spirits.2 The use of jet and of other forms of black clothing and ornament in mourning was apparently because black was able to shield the wearer from spirits. So also, perhaps, the Buddhists, Jains and Vaishnavas colour their gods black. The Srâvak bridegroom in Gujarât wears a black silk-thread round his right ankle. In Gujarât Muhammadan women, before taking a child out, mark its feet, cheeks and palms with black to keep off evil spirits.4 and to ward off the Evil Eye they put a bit of charcoal into milk." The Poona Halalkhors, as a part of the wedding ceremony, blacken the bride and bridegroom's Hindu lying-in women in the Dekhan sometimes rub their teeth with black dentifrice. Black thread and black nuts are hung round a Dekban Knnbi child's neck. to help it to hold up its head. Among the Ahmednagar Kolls to keep off the Evil Ey: the child's eyes are marked with soot.3 In Dharwar, Lingayat women blacken their The Vaisheava sect-mark for men is an up-and-down black mark with a red water-like circle of turmeric and cement. Kanarese women blacken their teeth with antimony. 10 Among Blispur Brahmans, on the fourth day after a marriage, when the bride and bridegroom are making ready to go to the boy's house, the girl's mother goes to the house-shrine, and, holding a tray with a burning lamp over her head, walks five times round the marriage guardian. As she walks, her brother holds a sword above the flame. When the fifth turn is ended, the soot is scraped off the sword blade, and it is spotted over the boy's and girl's faces, 11 The Bîjâpur Lingâyat Kumbhârs mark the bride and bridegroom's brows with suct to keep off the evil eye. 13 Karnatak Brahmans, in thread-girding, blacken the boy's eye-lids, 13 m., 1 among Karnitak Muhammadans, when a man is attacked with severe fever, a black cloth, black grain, and a black hen are waved round the man and taken out to a river side. The black hen is possessed by the fever-spirit, and is allowed to go into the jungle. Araband Persian wome a make a black circle round the eye.14 According to the ancient Persians of the Sipasian faith, Saturn was a black stone, his temple was black, and his ministrants negroes, who were clad in blue.15 Women in Central Asia used to blacken their teeth.16 In Burma, at the fish festival. some boys walk with their faces chalked, and others with their faces sooted." Japanese girls at marriage blacken their teeth.19 Women in the Philippine Islands blacken their teeth.9 The Motus of New Guines, when in mourning, blacken their whole body.20 In Central Africe,

after the wife's death, the husband for two and half years wears a thick daub of charcoal paste over his face; widows wear a blackened band of dry banyan leaf round the forehead.²¹ Lamp-black and oil are applied to their eyes by Msnahili women in East Africa.²² Among the Colerado North American Indians mourners cover their faces with black paint.²³ In Mediæval Europe, black oxen and black cows were specially valued as sacrificial animals.²⁴ Russian women wear black in mourning.²⁵ The Germans put black cummin seed in a babe's cradle before its christening to keep off evil spirits.²⁶ Sir W. Scott found beads of coral with bones and ashes in a burial urn in a cairn at Liddesdale in Scotland.²⁷ In Scotland a thread of black wool with nine knots cures a sprain.²⁸ When a death happens in a Devonshire house, some crape or other black stuff is tied to the hive, or the bees die.²⁹ The practice has its root in the belief that the dead will come back and will go into the bees, unless he be scared by black. So it was held that to find treasure, that is, to scare the fiends which guard and hide the treasure, the seeker should use a black he-goat and a black hen.³⁰

White. - White is the ghostly colour, and whitewash is much used in the worship of the rural and early gods. Siva, the lord of spirits, is white.31 The Lingayats smear the brow with white ashes.22 To keep the Evil Eye from blighting a crop, the Dekhan Kunbî sets in his field a white pot at the end of a pole.33 Among most Brahmanic Hindus the wedding dress is white. According to Dr. Buchanan the people of North Kanara wash their houses with a white clay called jaydi manu, that is, earth from Mount Jaydi, which they mix with the ashes of muddi bark. 34 Some Karnatak Brahmans, in the thread-girding ceremony, cover with chalk the outside of a copper vessel, into which they entice the boy's special guardian.35 The Burmese kine has a white throne, a white umbrella, and a white elephant.36 In China, at a Buddhist priest's funeral, all present wear white waist-bands.37 On her coronation day, Queen Ranavalona I. of Madagascar had her brow marked with white clay.38 The people in the outlying parts of Nubia, when they suddenly saw Burkhardt, said: - "Save us from the devil."39 White horses and snow-white pigs were considered inviolable in Mediæval Europe.40 The Russian babe. after baptism, is clad in white.41 In the early Christian Church in Ireland and Scotland, white was the baptism colour.43 Pennant (1800) in his Tour through South Wales, p. 28, noticing the whitening of the houses, says :-- "This custom, which we observed to be so universally followed from the time we entered Glamorganshire, made me curious enough to inquire into its origin. It was entirely due to superstition, the good people thinking that by means of this general whitening they shut the door of their houses against the devil."43 In England, at the funerals of unmarried persons of both sexes, as well as of infants, the scarves, hat-bands and gloves given as mourning used to be white.4 White is an unlucky colour for English kings. Charles the First was crowned in white.45 In ancient times, in England, people used to raise the devil by making a white circle with chalk, setting an old hat in the centre of the circle, and repeating the Lord's Prayer.46

Comb. — Among high-class Hindus in Bombay, when a girl comes of age, her lap is filled with fruit, rice, betel-nuts and leaves, and a comb. Among the Beni-Isrâ'il coming of age and

pregnancy rites, the first rite is to comb the girl's hair.45 The Sinhalese wear a comb in their hair. The Papuans of North Guinea wear a hambon comb in their hair with a cloth hanging from the points of the comb like a flag.43 The comb was considered a sacred emblem in pre-Christian times, and was often used in divination. In Christian days it preserved 30 much of its sanctity that we find a comb mentioned among the apphances needed at a solemn High Mass, especially when surg by a Bishop. Some sacred combs were of ivory, some were plain, some were adorned with elaborate carving, even gemmed with precious stones. A list of sacred combs is given by Dr. Rock as having belonged to St. Cuthbert, St. Nect, St. Duestan and other Saints. Various combs were long preserved at Durham, Canterbury, Clastonicary and other holy minsters. At Thetford, in the church of St. Sepulchre, may still be seen the comb of St. Thomas, the martyr of Canterbury, and at Durham the comb that was found inside St. Cuthbert's coffin.50

Coral. - In Gujarat, a coral ring is worn to keep off the evil influence of the sun. Poona Vaidus, an early tribe of wild doctors, wear coral necklaces. M. Pravil bhasma, or coral ashes, is a Hindu medicine. The Lepchas of Darjeeling wear a profusion of mock coral and coloured beads.53 In Bengal, coral is touched by mourners when they are purified.34 Barbosa in 1514, noticed that Hindu women in Vijayadurg wore five strings of coral round their arms. 14 Coral and tortoise-shell are worn as ornaments by the Andaman Islanders. Arab women, in North-West Africa, wear long strings of coral round their necks.⁵⁷ Coral is worn on the neck in Nubia.59 The South Central African diviner holds a white coral in his hand.50 Coral keeps off fear.60 A coral worn round a child's neck helps it to cut its teeth. It is an amulet against fascination. According to a Latin work (1536) witches say that coral keeps lightning, whirlwinds, tempests and storms from ships and houses. 51 In England, coral was used as an amulet against epilepsy.62

Cross. - In many parts of the world, long before it became a Christian symbol, the cross had a magic or spirit-scaring power. Its presence on early remains shews that, from the thirteenth century before Christ, the cross was a common and favourite ornament or shape in Asia Minor, Greece, Italy, Central Europe, the British Islands, Skandinavia, and Iceland. Besides the even-limbed Greek cross and the shafted Roman cross, two forms of cross have been held in widespread honour as lucky or talismanic. These are the ring-topped cross or crux ansata of Egypt, Asia Minor and Chaldes, and the guarded cross, the gammadion or svastika, of Skandinavia, Central Europe, the Caucasus, India, Tibet, China and Japan. At present, with no trace of connection with any of the higher religions, the sign of the cross is held to be lucky and a scarer of evil spirits by many of the lower classes in India, in Ashantee and other parts of Africa, and in North and South America. Spirits fear crossed lines. So, to keep off sickness. the Masalarus, a class of Dharwar beggars, brand with a red-hot needle their new-born babe, with the form of the cross.64 The tribula, or trident, is one of the weapons of Sira, the lord of spirits.65 At the ear-boring ceremony among the Belgaum Gosavis, the teacher, who performs the ceremony, begins by setting a trident in the ground and worshipping it. " The Bildour Lamanis mark the backs of the bride and bridegroom with a turmeric cross. 7 The Sarvavanis Lads of Bijapur mark with a cross the cloth that is held between the bride and bridegroom. The Bijapur Gavandis have a yellow cross in the centre of the cloth which is held between the

bride and bridgroom.60 The Bijapur Bedars, before marriage, draw a red-powder cross, in the lucky or svastik shape, on a white sheet. 70 Among the Roman Catholics of Kanara, at baptism. the priest signs the child's head and breast with the sign of the cross.71 The Dekhan Ramôsis. at a marriage, spread on the ground a square of wheat and millet grains, and divide it into four by two lines drawn from opposite corners.72 The svastik, or end-guarded cross, holds the first place among Jain lucky marks. Gujarât Jains, or Srâvaks, on marriage days draw lucky crosses on the shaven heads of children. A red circle, with a svastik in the centre, is marked on the place where the family gods are kept.73 The Jews are said to have marked the brow with the tue, or T cross, to secure safety. 74 Certain Egyptian amulets were marked with a cross. 75 The Chinese set iron tridents on the tops of their houses to keep off evil spirits, and place them on the taffrails of ships to ward off evil.76 Chinese spirits write with a T-shaped planchette made of peach wood.77 In the expedition despatched by the Emperor Maurice to assist Chosroe II. against Behrâm (A. D. 600), General Narses sent to Constantinople some Turks taken as prisoners who bore, marked on their forehead, the sign of the cross. The emperor inquired why barbarians bore this token. They said that once, during a virulent pestilence, certain Christians had persuaded their mothers to prick a cross on the foreheads of their children.78 In the Hawaii and other islands79 the ground floor of some of the temples was shaped like a cross. According to Hahn, the Hottentots (1600-1700) went into caves and said prayers, raising their eyes to heaven, while one makes the mark of the cross on the other's forehead.40 The cross is a common symbol in South America. 81 Constantine's cross standard, the Labarum, was a Roman cavalry standard, a long pole with a cross beam or silken veil hung from its end. 22 In Europe, in the Middle Ages, the cross was supposed to restore life.83 A cross is worn round the neck by all Russians night and day. It is also hung in cradles.94 The Russian priest crosses the child over its brow, lips, and breast.85 At a Roman Catholic baptism the cross is signed eight times on the adult's ears, eyes, nostrils, mouth, heart, and shoulders, and thrice in the air.86 The Germans believe that on the three nights of Yule a cross should be made on stable doors, or the horses will be fairy-ridden. According to Grimm the belief that witches and devils shunthe cross is the reason why so many crosses are seen on German doors on the first night in May. According to Count D'Alviella, 98 in Flemish Brabant, a whitewash cross saves a wall from lightning, and guards the inmates from fire and sickness. Whitewash wall crosses are common in Belgaum and other parts of Western-India to keep off sickness and the effects of the Evil Eye. The German peasant used to plough a cross into each corner of his field, and, to guard unchristened children against elf or devil, a cross was hung over the cradle. Saint Teresa, the great Spanish Saint (1540), seeing the devil in a vision, put him to flight by making the sign of the cross. Charlemagne, of France and Germany, retained among his symbols of rule the cross which from time immemorial served in all countries as a magic symbol, significant of power over the elements, especially over water.90 Among the Roman Catholics, at the beginning of the confirmation ceremony, the Bishop signs himself with the cross. 91 At baptism the priest makes a sign of the cross, and savs:-- "Satan, fly; behold God, great and mighty, draweth near." The signing of the cross in consecrating salt at baptism is expressly said to be made to exorcise the evil spirit out

of the salt.93 That the object of signing the cross is to scare the deal, is again shown in the Roman Catholic baptism, where the priest says: - "And this sign of the hely cross, which we make upon his forehead, do thon, accursed devil, never dars to violate. 24 Similarly, the baptismal sign of the cross is said to be made that Christ may take possession. 55 A Reman Catholic should make the sign of the cross as soon as he awakes, "caccording to the rule, "when you awake defend yourself (that is, from the lagging spirits of night with the sign of the cross."97 In the Litany the Cross is called the Terror of Demons." The black read or black cross of St. Margaret worked wonders." The Royal English Sceptie has a cross, 100 and a Maltese diamond cross is used in the coronation of the English kings. If, after supper on Christmas Eve, a girl shakes out the table cloth at a cross-way, a man will meet her and give her good even. Her husband will be of the same height and figure.3 In the north of England, the bride's maids at night cross the bride's stockings.3 The following lines occur in Scott's Lay of the Last Minstrel, Vol. II. p. 15:-

"That his patron's cross might over him wave, And scare the fiends from the wizard's grave."

The widespread worship of the cross, to which these examples bear witness, seems to belong to two main stages: - (a) The worship of crossed lines as in itself a lucky evil-scaring shape; (b) the worship of the cross as the symbol of a guardian. The earlier view of the luckiness of crossed lines is the Indian (perhaps, is the Brabant) village idea that a whitewash cross guards a wall: this is the value of the cross on the Ashantee bronze and on the religious gourd-dram both of North and of South America. The same value may be supposed to lie at the root of the early cross worship in Asia Minor and Europe. Besides this early worship of crossed lines as a spirit-controlling picture, the use of the cross as a guardian-symbol was widespread before its adoption by the Christians. In India the favourite end-guarded cross is called svastika, meaning "it is well"; in China the cross is a symbol of life; in Japan it is a sign of luck; among the Phonicians and the Israelites the isu, or headless cross, was a sign of life and health; in Germany and in early America the hammer-shaped cross was a sign of fertility. This widespread agreement between the meaning of the cross as a symbol and its meaning as a picture of crossed lines seems to show that the early belief that the cross shape has a spiritscaring value aided its adoption by the later religions as a guardian symbol. Its form, into which so many meanings might be breathed, helped its popularity. Till late-born Islam, with the doubtful exception of the religion of Zoroaster, few of the higher religions have failed to adopt the cross as a worshipful symbol. Among the high pre-Christian religious Sun-worship so thoroughly accepted the cross as a symbol of the gnardian Sun that Count D'Alviella, in his Migration of Symbols, rests satisfied with tracing the cross to a sun-symbol. The examples given above shew a worship of crossed lines that passes back into beliefs earlier and coarser than the refinements of sun-symbolism. That the good luck, or spirit-controlling power, of crossed lines is older than its guardian influence as a sun-symbol is shewn by the use of the cross as a symbol of the moon and of so many other guardians besides the sun, that the cross has been supposed to be a general sign of divinity.

The question remains: - If the virtue of the cross has its origin, not in the fact that it is the symbol of some great guardian but because of the demon-ruling influence of a picture of crossed lines, to what is the demon-ruling power in crossed lines due? The explanation seems to be the early and still widespread belief that spirits haunt the crossings of roads. In many parts of Western India, even in Bombay City, in the early morning, may be found at the crossings of roads a basket with cocca kernel, flowers, an egg, rad powder and oil, into which some

harassing demon or some disease fiend has been coaxed or scared out of its human lodging, and set at the nearest meeting of roads as both a spirit haunt and a prison, from which the spirit cannot escape to return and yex his victim. At many Gujarat cross roads, especially where the crossing takes the shape of a trident, or trisula, a small shrine is built to shelter the local spirits. In Rathagiri, the spirit to whom the shrine is raised at the $ch\theta_d$, or cross-road, is the chinchar, or acharva, that is, the master of ceremonies, or the lord of the spirits, whose haunt is the road crossing. So in Catholic Christian villages, both in Western India and in Europe. except where it marks the site of some murder or of some special escape, the road-side cross is a chôuchar, or crossing-master, set there to keep in order the spirits who haunt cross-ways. Till lately the English suicidewas buried with a stake driven through his body where three roads met. What is the sense of this special burial? The sense is that the spirit of the spicide leaving the body in anger and at the same time suddenly and so in full power, was a special source of danger. The stake was driven through the body to lay the body and prevent it walking. Cross-roads were chosen as the burial place, because from the crossing of roads no spirit can escape. The road is a spirit haunt. So Roman tombs line Roman streets. Travellers going in fear, their minds full of ghosts, see something pass and disappear. No where do so many visions disappear as at a cross way: therefore no place imprisons spirits so effectively as a cross way. The adaptations, by which the early idea that cross roads are spirit haunts has been altered to meet the requirements of the higher faiths, is a notable example of the great religious law of meaning-raising, the law by which wit breathes into old beliefs a meaning that enables the earlier rite to continue in keeping with higher conditions. The Chinese raise the original picture of cross-ways into a symbol of the fourfold division of the earth; the Assyrian into the main directions of space, a symbol of the god Auu: the Argentines into a symbol of the Wind, and the Mexicans into a symbol of the Rain; the Sun-worshipper into a symbol of the Sun, whose beams ray to the ends of the heavens: finally, as Count D'Alviella notices.5 to the Christian the cross is a symbol of the latest phase of the deep-seated worshipfulness of the guardian, the redemption of the world by the voluntary sacrifice of a God. Or, as Justin Martyre still more enthusiastically cries: - "The sign of the cross is impressed on the whole of Nature. Hardly a craftsman fails to use the figure of the cross among his tools. The cross forms a part of man himself when he raises his arms in prayer." Count D'Alviella has probably successfully proved that the guarded cross, the gammadion of the Greeks, the svastika of the Hindus, is especially a sun, cross. The same year (A. D. 323) — which saw Constantine the Great turn the labarum, a Roman cavalry standard, into the imperial sign of the cross, saw the same Constantine dedicate the first day of the week to Apollo and call it Dies Solis or Sunday. Three years later (A. D. 326) saw the finding of the true cross by Helena, Constantine's mother, and the beginning of the miraculous diffusion of its fragments over Europe. Still this is the end, not the beginning, of the history of the sign of the cross. As a sun-symbol, the lines in the gammadion or svastika, at right angles to the ends of the cross limbs, are explained as representing the speed with which the sun runs his daily race through the heavens. In spite of the suitableness of this explanation, the original object of drawing lines across the limb-ends seems to have been, not the addition of speed to a sun-symbol, but to increase the spirit controlling power of crossed lines by guarding the points of exit and so preventing the escape of the imprisoned spirit. No example can be quoted to prove the use of the end line as a prison bar. Still, in the higher phase of the idea of crossed lines, as a means of housing and caring for a guardian, the lines across the limb-ends preserve the original meaning of guards and become devices to protect the housed guardian from the attacks of wandering or of rival fiends. With this slight raising of their meaning, the root idea of the guarded cross ends remains in certain Hindu ceremonies, where an enclosing belt of svastikus, forming a barrier to the entrance of wandering or rival spirits, leaves a central area of safety, which is called Nandyavarta, that is, Nandi the lucky one's house. The same idea of

⁵ Migration of symbols, pp. 2, 12 and 13.

sheltering a guardian by placing it in the centre of an end-guarded cross occurs in a Cretan coin, where a central crescent moon is surrounded by a cross-shaped fret or labyrinth. So the end-guarding motive of the svastika works into the fret and the fret is developed into the meander maze, or labyrinth, with which in so many ceremonies the Hindus are careful to surround their guardians. That the connection between the end-guarded cross and the guardian fret is not solely Indian is shewn by two remarks in the Migration of Symbols: one (p. 42) suggesting that the svastika, or Nandi-house, is a form of labyrinth, which, in the manner of a Greek meander, may be connected with a gammadion; the other (p. 83) noticing that the fret, or svastika, is associated with the meander in the New World, as well as in the Old.

Crown. — The crown is a guardian. So Saul wore his crown in battle, and most Hindu brides and bridegrooms in Western India, at their wedding, wear wedding coronets called báshings, or brow-horns. Egyptian crowns were adorned with figures of lions and bulls, branches of trees and representations of flames.9 The early Egyptians used feathers in making crowns.10 The Jewish high-priest wore a crown, or a gold band round the crown, with the words "Holiness to Jehovah." A crown of gold topped the Jewish ark,12 and crowns were worn at Jewish weddings. 13 A holy crown was set on the top of Aaron's mitre. 14 The crowns found by Schliemann at Troy are on the heads of the dead. Formerly, crowns used to be. made of the following sacred leaves, clover, oak, strawberry, roses and lilies.18 Among the Cimbri, the priests went to the prisoners, crowned them, and cut their throats.17 The imperial diadem at Rome was a broad white fillet studded with pearls. 12 The Romans had olive crowns. One form of radiated crown worn by the later Roman emperors was the same as the crowns worn by the gods. 19 Roman high priests were crowns of clive leaves, or ears of corn and gold. According to Pliny, the Romans made crowns of violets and roses. They were crowns, not only in honouring the gods and the lares, but also at funerals.26 Among the Greeks, as well as among the Romans, crowns were placed at the door of the house where a child was born. In Athens the crown was of olive leaves; in Rome it was of laurel or ivy." Roman Catholic Bishops put on the mitre when they go to confirm.23 In Bussia, and formerly in England, crowns were worn at weddings.25 King Alfred's crown had two little bells.24 In England, in 1420, a crown was borne on a cushion in the front of the army.25 Henry the Seventh, before putting on Edward's crown, had it sprinkled with holy water, and censed.26 James the Fifth of Scotland was presented with a hat blessed by Pope Clement on Christmas Eve, that it might strike fear into Henry the Eighth.27

Dancing. — Dancing is a phase of spirit worship. The excitement of dancing makes the dancer a tempting lodging alike for the unhoused spirit, the familiar, and the early guardian The early tribes of India are great dancers. In Western India, among the early tribes who are fondest of dancing, are Kôlis, Bhîls, Kâtkarîs, Thâkurs and Vârlîs. These early tribe hold their dances, especially in the month of Aśvin, during the Dîvâlî holidays. In Thânâ during the Dîvâlî in October and the Hôlî holidays in April, Kôlî and Vârlî servants dance at the houses of their employers. In Bombay, Kôlî and Kunbl women are called by Prabhus to dance before the goddess Gâvrî.

Among the Marâthâs the worship of the chief goddess of the Dekhan, Tulja Bhavani, is celebrated by a set of dancing devotees, called Gondhalls, whose leader becomes possessed by the goddess. The details of the ceremonies connected with the dance are interesting. A high

```

stool is covered with a black cloth. On the cloth thirty-six pinches of rice are dropped in a heap, and turmeric and red powder is mixed with the heap.30 On the coloured rice-heap a copper vessel, filled with milk and water, is set, that the goddess may come and take her abode in it. In the mouth of the pot betel leaves are laid, and on the betel leaves a cocoanut is set.31 Five torches are lighted and given to five men of the house, who walk round the stool five times, shouting Ambâ Bhavânî:32 Then the music plays, and the dancer dances and sings in front of the goddess.33 It ends with a waving of torches round the goddess' face. The object is to win the goddess' favour by driving away spirits from her. If she is pleased, she can control the bands of spirits.

Among the Màdhavas and other Dêśastha Brâhmans the gondhal is performed at their thread ceremonies, marriages and pregnancies. Other castes perform the gondhal at marriages only. At the marriage of Gôvardhan Brâhmans in Poona the boy and girl are seated on the shoulders either of their maternal uncles or of servants, and their carriers perform a frantic dance.34 The Râvals, or Nâth, beggars in Ahmednagar have a jhêndû, or war-dance, at their weddings.35 A gôndhál dance in honour of Tulja Bhavani is performed by Belgaum Salis at weddings.36 Among the Patvêgars of Belgaum no wedding is complete without its annahal dance.37 In Belgaum, every Thursday, dancing girls dance before Asad Khân's tomb.38 The . Nàmdêv Shimpîs of Nîgar, during the wedding ceremony, perform the jhêndû dance when their maternal uncles lift the boy and girl on their shoulders and dance, beating each other with wheat cakes.39 In the Kônkan, on Gôkulashthami day in August, cowherds cover themselves with dust. and catching one another's hands dance and shout the name of the god Gôvind. 40 The Asadarus, a class of Dhârwâr Mâdigars, dance before and abuse the goddess Dayâmavâ during her fair.41 Though the higher class Hindus of Western India seldom dance, Guiarât Vânîs and Bhâtiâs, occasionally dance in honour of Krishņa. Similarly, pious and staunch worshippers of the god Siva, at the end of their worship, dance before the god, who is specially fond of dancing and singing. At Pandharpur on the ranga sila, or pleasure stone. devont pilgrims dance, singing Vithôbâ's praises.42 Among the Kirântîs of the Nêpâl frontier exorcists dance. 43 The Santals have a dance much like Krishna's ras. 44 The Khonds. married and unmarried, are great dancers.45 The Hains, Hayas, or Vayas of Bengal celebrate curious arm-locked dances.46 In Bengal, on the bright fourteenth of Phâlgun (March) people dance, sing and revel.47 On the fifth of Magh (February), at Sarasvati's festival in Bengal. students dance naked and commit indecencies.48 The festival of Jagad Mâtru, the mother of the world, is a scene of much merry-making and indecency. People dance naked, and say that dancing is the way to heaven.49 In Bengal, during the Durga festival, dancing girls are called to dance in houses where the goddess is worshipped. 50 In Coorg, at a yearly festival. a Brâhman dances before the idol shrine with a brass image of Îsvara on his head.51 The Coorgs are fond of dancing. They perform the devarakahe, or stick-dance, in honour of Bhagavati.52.83 Barbosa (A.D. 1514) was much struck with the dancing girls of Vijayanagar. They were great dancers, like enchantresses playing and singing. Some thousands of them were in the

The black cloth, the rice, the turmeric and the red powder - all scare spirits.

s The object of the leaves and the nut in the mouth, like the heap of coloured rice below the pot, is to keep spirits from worrying the goddess.

³² The lighted torches and the five circles are to keep off evil spirits.

³⁸ Music, dancing, singing the god's praises - all scare spirits.

pay of the king, and went to war. 44 In the procession of teachers, or gards, in South Indus. dancing girls take part, singing indecent songs, and making indecent movements.85 Among the Hindus of Southern India, no religious ceremony or festival is thought to be performed with requisite order or magnificence unless it is accompanied by dancing. Every great temple has its set of dancers. 86 The Hindus consider dancing a form of devotion. 87 The Shanars of Tinnevelly are famous dancers. They begin slowly and growing by degrees excited, they glare. leap, and snort till they lose self-control and believe they are possessed by a spirit." The possessed dancers of Ceylon closely resemble those of Tinnevelly. According to Maurice, the Indians used to perform a circular dance in honour of the sun.20 In Burma, dancing is a favourite mode of welcoming an official. The Burman ocasionally dances on his way to the pagoda in a hideously solemn tone of mind.22 The Buddhist priests dance, whirling wildly among the round tables placed in front of the goddess of mercy.*3 Dancing to the light of large basket torches is common in Japanese temples.24 In Japan. sacred dances are held in honour of the goddess Ise, when girls dance holding a branch of the sakakai in their hands. At Australian dances, or carobarres, each dancer carries a stuffed animal on his back.96 Dancing is common among West Australians. Dr. Livingstone says of the South Africans, when people ask the name of a tribe, they say :-- "What do you dance?" Dancing among South Africans is accompanied by loud shouting.* Dancers among the Arsauins of Murocco cut the body till blood flows.100 The Hottentots have a reed dance, which they perform in front of any high stranger who comes to their village. A solitary Hottentot was seen dancing and singular round a heap of stones. He had slept there one night, and next morning found that a lion had passed close to him. He judged that his escape was due to the stones, which must be the house of a god or a ghost. Therefore, as often as he passed he danced in memory of the spirit's kindness.2 The Hottentots rise at dawn, take each hy the hands, and dance." The Hottentots' chief religious function is the igni, or religious dance.4 The Bongos of the White Nile at harvest time yell and dance.5 At West African festivals men and women dance together, singing ribald songs. The Ugogo negroes dance and drink grain beer. Their dances are indecent." In their great festival, the King of Dahomey himself dances with a wife or two on either side.8 The curious American masquerade dances were naked, but apparently moral. In the fourteenth century, during the misery of the Black Death, a dancing mania passed over Europe which was cured by exorcism. Burton notices that the dancing fits sometimes lasted for a month, and were believed to be caused by evil spirits. Music soothed the disease.11 In Sweden, reels and other dances were performed by the heathen over the holy places of their gods. 18 In France and in the Scotch Orkneys, people danced round large upright stones, singing by moonlight.33 In Orkney (1793), people used to dance and sing round a big standing stone.14 The early Christian Church denounced dancing. keeping open public houses at night, and getting drunk on the first of January.15 The violent exercise, shouting and finger-cracking, which accompany a Scotch reel, suggest that it was originally danced to drive away or to house spirits. Circle-dances remained in England in the Maypole dances and in the child's dance known as "round the mulberry bush." Bun-

dances used to be held in North England on Easter Morn.16 The guarding effect of circle dances would be the same as the protection given to an object of worship by walking round it three times sunwise, that is, of pleasing wandering spirits by housing them. Dancing would then be associated with funerals, for the reason that drunkenness was practised at funerals, namely, to house spirits. The special religious position which dancing girls hold in India, is due to the belief that the dancers are scapegoats, drawing into themselves wandering spirits. In the Kanarese districts of Bombay and in Southern India. almost every wedding, almost every religious procession of any importance, is headed by a group of dancing girls, whose right to head the procession seems difficult to explain. except that dancing, like music. was thought to scare spirits, or to please spirits by housing them.

Dung .-- Dung like urine, is an early medicine; it is used as a plaster, and the fumes of burnt dung restore conscionsness. It is also used in parts of Western India as a cure for itch. These healing properties secured for dung a place among spirit-scarers.17 Most Hindus deny that the every-day smearing of a house with cow-dung has any basis, except the fact that it keeps the house sweet and clean. But the older belief that the sweetness and cleanness were due to the power of cow-dung to keep off evil spirits remains in the case of the smearing of a house after a death with the object of clearing the house of evil spirits. Further, several Hindu religious books, among them the Govardhananhika, Manu, and the Bhagavata Purana. admit the spirit-scaring properties of cowdung.19 In the East Dekhan, the exercist threatens the spirit with the fumes of pig's dung, if the spirit does not declare who he is. Among Guiarat Kunbis, in the pregnancy ceremouies, goat and mouse dung are laid in a jar. In a Parsi house. if a boy is much wished for and a boy is born, he is hidden, and instead of the boy a lump of cow dung is shewn to the mother. The reason is to cleanse the mother's glance of the Evil kive. Nearly the same idea seems to explain the practice of Hindu methers, when a person over-praises, or, as the Scotch say, fore-speaks, their children, turning aside the Evil Eve by saving: "Look at your foot; it is covered with excrement." The Evil Eye in this, as in other cases being the unhoused spirit, who, drawn to the child by hearing its praises, might make his abode in the child. So to prevent wandering spirits from lodging in his grain heap the Hindu cultivator crowns it with a barhawan, or cow-dung cake. Balton notices that the Parhêvvâs of East Bengal used to smear their houses with sheep and deer dung instead of with cowdung,20 The Gonds make the bridegroom sit on a heap of cow-dung,21 In Bengal. cow's urine and dung are offered to the goddens Durgi. In Mysore, the quest, or spiritual teacher, pours cow-dung and water on his disciple's head. The Mysore Smart Brahmans mark their brows with three horizontal lines of cow-dung sahes." According to Dubois, at Nandgaon, about thirty miles south of Seringapatam, a barren couple used to go outside the temple, make cakes of human dung, and eat a portion.25

Cow-dung and cow-urine, with milk, curds and butter, form the five cow-products which are worshipped in South India. New earthen pots, are cleansed by pouring into them the five cow products - milk, curds, butter, dung and urine. The five pots are set on darba grass and worshipped. They are called the god Panehgavia, and the worshipper thinks on their merit and good qualities, lays flowers on them, and mentally presents them with a golden throne. Water is sprinkled and waved over them. They are crowned with coloured rice, and are mentally presented with jewels, rich dresses, and sandal wood. Flowers, incense, a burning lamp, plantains, and betel are offered, a low bow is made, and the following prayer repeated:-"Panchgavia, forgive our sins and the sins of all beings who sacrifice to you and who drink

¹⁴ Op. cit. p. 83.

If The fact that spirits in India and in Melanesia eat excrement (Jour. Authory, Inst. Vol. X. p. 202) shows that is the healing power of dung, not iss nastiness, of which spirits stand in dread.

entre entreples department over all reserving and supple parties survive team. Also, they are treat, and the con-

you. You have come from the body of the cow; therefore I pray you to force any conand to cleanse my body. Cleanse me, who offer you worship, from my sing. Paragraph of the me." After a second bow and the meditation of Hari, the five products are mined in one copy. the priest drinks a little, pours it into the hollow hands of the worshippers and that drives Nothing is so cleansing as this mixture. All Indians often drink it. The five nectors - Part ourds, butter, sugar and honey - are good, but much less powerful.2

Cow-dung is generally used in Brahman purifications.27 Cow-dung in coten he Harden is an atonement for sin.28 In consecrating fire and hallowing sacrificial introductions must be smeared with cow-dung.29 In the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.29 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.20 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.20 in the Malay Archipelago, Oderic (132), formal a most be smeared with cow-dung.20 in the most be smeared with the most be smeared with co tree, for which the only cure was to eat human dung mixed with water.20 used as a cure in Burma.31 Pigeon's dung is a medicine in China.52 In China herse-dung is used as a cure for the black sweat in horses." The Chicago and he are dung an excellent salve for boils, inflammations and abscesses,24 and the excellent shared by the English peasantry. In China, human dung is considered a very assent medicine in fever and small-pox. Buddhist monks are famous for the prevarious of this drug. Some consider it the clixir of life." According to Tavernier (A. D. 1977) the excrements of the Dalai Lama are kept with care, dried, and eaten as madicine." The Australians, who live near the meeting of therivers Page and Isis, cure wounds by laying on the wound the burning dung of a kangaroo. At the end of the bora, or man-making coremony, in Australia, the youths have to eat the excrement of old women.26 The dressing of shacerses in North-West Africa is cow's dung. In Morocco, wounds are dressed with cow figure to while the Abyssinians eat human dung and water as a cure for snake-bite.41 The Romana believed that the dung of different animals wrought many cures. The early Germans (A. D. 160) covered their under-ground granaries with dung.45. Burton, in 1620, mentions sheep's dung as a cure for epilepsy, and notes that the excrement of beasts is good for many diseases. M In Special (1800), before the calf ate anything, cow-dung was forced into its mouth. After this, neither witch nor fairy could harm it.45 In Strathspey, in North Scotland, a country, or wisewoman's, cure for illness caused by charms is a warm cow-dung poultice.48

Cali-dung sodiler. in wine for melancholy, and the ashes of calf-dung in wine and goal's dung for droppy, for shingles, and for a dislocated joint, and the smoke for consumption. Goat's dung sured dislocations and rheumatism; hart's dang. dropey; hare's dang, burns; and pig's dang, consumption, meaden, swellings, burns, convulsions, cramps and bruises. Its manifold medical uses seems to explain why in Western India the small of pig's dung is believed to 42 Pacitus' Germania, Cap. 18. Marton's Anatomy of Melancholy. p. 431. frighten spirits.

⁴⁵ Brand's Popular Antiquities, Vol. III. p. 267.

- Being costly, they are regarded as evidence of wealth, and only the well-to-do members of the community afford themselves the luxury of possessing one or more specimens. They are said to be survivals of ancient weapons.
- 16)6 (f). Neng-ta-chiha. Ornamental loin-cloth, presented by the host to each male guest at a memorial-feast; worn over the ordinary loin-cloth (vide No. 48b), during the dancing which takes place throughout the night. Those worn at Car Nicobar differ but slightly from the ordinary neng (vide No. 48b), having usually merely a border of white chintz added to the invariable Turkey-red. The women, who make this and the lôe-ta-wia (vide No. 161), charge for their labor at the rate of about 1 dollar (or Rs. 2) for ten, the employer providing the materials. A good sewer can make two of these garments in one day.
- 161 (f). Lôe-ta wia. Ornamental skirt, presented by the hostess to each female guest at a memorial-feast; worn over the ordinary skirt (vide No. 48a) during the dancing which takes place throughout the night on such occasions. At Car Nicobar the women wear either red-colored handkerchieves, or Turkey-red skirts, in addition to the ordinary blue chintz skirts (vide No. 48a).
- 162 (m Henwe. Flags, used for decorating large canoes on the occasion of memorial-&f). feasts. These, as well as Nos. 160 and 161, are generally of quaint designs, the product of the inventive talent and taste of the maker, as determined by the means at disposal.

18. Articles connected with Religious Customs.

- (m). Hentain-kōi-pentīla. Large open basket lashed to a stout post (called komching), which is planted at the head of a grave at the time of interment. The basket, being one used by women only, is rarely seen so placed, except where a female of not less than about 13 years of age is buried. In this basket are placed various small articles which belonged to the deceased. The homyūsm and hichīh (vide No. 51), which she left, are attached to this object and, like them, are left to moulder on the grave.
- 164 (m). Shani-pan or Shin-pan. V-shaped pegs used in the Central Group, when burying a corpse. Some uneven number (generally 5 or 7) are fixed down across the body from head to feet, the object being to prevent the spirit of the deceased from rising and troubling the living. They are made of the Garcinia Speciosa, of which also are made paddles (vide No. 3), outrigger pegs (vide No. 2) and fighting-sticks (vide No. 28).
- 165 (m). Hentā-koi. Carved figures, or painted wooden-or spathe-screens, representing real or mythical animals, birds, or fishes, also models of ships, canoes, ladders, etc. The execution of these and other carvings and paintings by the Nicobarese, though crude, not unfrequently displays a fair amount of talent. Kareau (vide No. 152) at certain periods also serve as hentā-kōi. They are made at times of sickness at the direction of the Shaman (menluana), with the object of discovering and frightening away the bad īwî (i. e., the evil spirits), which have caused the sickness. If the patient recovers, the henta-koi is regarded with favour and retained for future service; but if the patient dies, it is thrown away into the jungle. The figure of a ladder (halak), when carved for this purpose, is intended for the use of the Menluana's spirit to climb up and discover whether the malicious spirit is in the air; while the model of a canoe or ship is to enable his spirit to search among the neighbouring coast-villages or islands. The figures usually carved, punctured (on an Orania spathe), or painted, are a mermaid (shawala), merman (shamiral), gar-fish (Ilū), iguana (huyē), fish-eagle (kalāng), a mythical animal with human face and back like a tortoise (called kalipau, and declared to exist in certain

portions of the jungle of Katchal Island), and various others. They are generally placed or suspended in the hut, but a few are sometimes to be seen in front of the huts. The object of these representations of animals, birds, and fishes is to invoke their assistance and good-will in the endeavour of the menluans to discover the whereabouts of the offending spirits, and to alarm the latter with the appearance of these effigies in the event of their venturing to repeat their visits. Henta-kōi are to be seen principally in the Central Group, less commonly in the Southern Group, and rarely at Teressa, and Chowra, and never at Car Nicobar, where the models of ships stuck on posts on the foreshore during the trading-seasons must not be mistaken for an analogous practice, those effigies being used with the object of attracting trading-vessels to their coasts at such times as they have accumulated large quantities of cocoanuts for export.

- 166 (m). Hentā-kōi-kalang. A carved fish-eagle; one of the most common effigies used for the above purpose (vide No. 165).
- (m). Henta. Paintings, punctured sketches on Areca spathe screens, or carvings on 167 boards. They are somewhat ambitious in design, containing sometimes 7 or 8 pictures on a single screen, but ordinarily only 3 or 4. In the former, a representation of the sun surmounts the whole, or the sun and moon are represented at the top right and left corners. The Creator (Douse) is depicted as standing dressed in some quaint garb; on either side of him are usually shewn various weapons, implements, and articles in daily use. In the sketch below him are seen huts, cocoanuttrees, birds, and sometimes men and women; below these domestic animals and poultry; below these again a row of men and women dancing; next come ships and canoes in full sail; and, lowest of all are represented various descriptions of fishes, with the invariable merman or mermaid, and crocodile. When first made. and at subsequent times of sickness, the henta is called henta-koi-henta. They are made and used in the Central and Southern Groups and at Teressa; but only in the Central Group are representations of Deuse (the Creator) ever introduced. The object supposed to be served by the henta is, as in the case of the other similar carvings and paintings, to gratify the good spirits (iwi-ks), and frighten away the demons (iwi-pòt, etc.)
- 168 (m). Henta-ta-òinya. This is a single representation on a board or Areca spathe of the Creator, and serves the purposes of a henta. Its name implies that the carving is carried through the board or spathe and does not consist of mere puncturing, or paintings, on one side of the surface of the material employed.
- 169 (m). Henyiingashi-heng, A henta representing the sun with a human face and eight "arms," between which are shewn his children (called moshaha), to whom is attributed the faint light at dawn. The object of this and the next item (henyiingashi-kahā) is the same as that of other hentas.
- 170 (m). Henyüingashi-kahē. A hentā representing the moon, in which Dēuse (the Creator) is depicted as holding a wine-glass in the right-hand: on his left side are usually shewn a pair of cocoanut-shell water-vessels (hishēya, No. 33), a lantern, Fandanus-paste board (shāla-larōm, No. 118), a basket (chūkai, No. 88), an Areaspathe mat, and pillow, also weapons, spoons, table, chairs, etc.: on the right side of the central figure are generally shewn a watch, telescope, boatswain's whistle, various spears (vide Nos. 11 to 27), spathe mat (No. 51), table and decanters. Only in the Central Group is Dēuse depicted in the above manner. This is probably due to the fact of Missionaries in this and the last century having laboured longer in that portion of the islands than elsewhere.

19. Toys.

- 172 (m). Evenlain (C. N. Kisēch-tissā). A spinning-top, consisting of a thin piece of stick pieced through the centre of a betel-nut or Cycas fruit: is played by, or for, the amusement of children.
- 171 a. (a). Tika-sechya or Taki-sechya. A similar toy, made and used at Car Nicobar. A seed of the *Entada pursoetha*, or similar species, is used in place of the betel-nut, or *Cycus* fruit. Sometimes a flat piece of lead is substituted, when it is called taki-sechya-pirum.
- 172 (m). Henlain-yūang-okdūaka (C. N. Chinvil). A toy, made by piercing two holes through a seed of the *Entada scandens*, and, after passing a cord through the holes, forming a loop on either side of the seed. The hands are then inserted in the loops and the seed twirled alternately in opposite directions by the action of the hands, after the manner of a similar toy well-known to children in Europe.

20. Miscellaneous Articles.

- 173. Ok-kap. Turtle-shell, sold to ship-traders.
- 174. Kol-rak, Dammar: mixed with cocoanut-oil, gum-resin (vide No. 176), and ambergris (vide No. 178), and heated in a shell over a fire for application to the forehead and temples as a cure for headache: also sometimes inserted in the ichē (vide No. 178), or, mixed with oil, smeared over the body, on account of its agreeable odour.
- 175. Pakau. Resin: heated in a vessel over a fire and applied, like pitch or tar, for caulking cracks in canoes.
- 176. Toi-en-loang. Gum-resin: used after the manner described above (vide No. 174).
- 177. Laharoma-holowa. Black bees-wax: sometimes added to the ingredients in the ointment described above (vide No. 174): also used for caulking small cracks in cances, bamboo utensils, etc. It is likewise inserted in the flageolet in order to modulate the tone of the instrument (vide No. 76).
- 178. Kan-pe. Ambergris: obtained in small quantities, chiefly along the coasts of the islands of the Central and Southern Groups, and sold to Chinese and Malay traders. When used locally, employed in the manner described in No. 174.
- 179. Oyàu-kaneäl. Peculiar cocoanuts with horn-like excrescences, produced on certain cocoanut-trees at some of the islands. As they contain but little kernel, they are valued by traders merely as curiosities. Also found on the Coco-Keeling Islands.
- 180. Yen-kanap. Encrusted human tooth, due to the practice of chewing unripe betel-nut with shell-lime and *Chavica betle*. These teeth are only to be seen in the Central and Southern Groups, as there only do the natives omit to rub their teeth after betel-chewing.

THE LOLO WRITTEN CHARACTER.

BY E. H. PARKER.

Some years ago the late Mr. E. Colbourne Baber made the discovery that the Lolos of Sa-ch wan and Yünnan possessed a separate and unique form of writing of their own, and published an account of it in the *Journal* of the Royal Geographical Society (Supplementary

3 % % \$ 6 6 % D 6 W B K X X X 6 4 % 6 6 % D 6 W B K X X X 6 6 % E X 6 % E X 6 % E X 6 % E X 8

CHUFALMER NO

Papers, 1882, pp. 124ff.) Mr. Baber's specimens include (1) a facsimile copy of a Lobo manuscript found in a Lolo house; (2) a list of twenty Lolo characters written by a Lobo in the presence of Mr. Baber), with the English equivalents; (3) a Lobo manuscript of eight pages obtained through the French missionaries from a Lolo chief. These I call MSS. Nos. 1, 2 and 3.

When I was in Sz-ch-wan in 1831, a Lolo chief, who had met Mr. Baber, sent me a heaveth at Lolo MS, on satin for Mr. Baber, which, I believe, is now safely stored away in Europe in the British Museum (but perhaps somewhere else). Before sending this book to Mr. Baber I took a copy of the whole. This I call MS. No. 4.

So far as I am aware, the above documents are all the Loke MSS, at present known to the world, unless it be one (once I believe in the possession of Mr. Haas of Shanghai), which used to be in the Library of the Shanghai Asiatic Society.

When I was in Corea with Mr. Baber, he shewed me a horhare by the late Prof. de Lacouperie, attempting to demonstrate that the Lolo character was in some way connected with Accadian. I was unable, however, to discern any evidence for such a conclusion in Prof. de Lacouperie's pamphlet. Afterwards, when I was in Burma, the Editor of this Journal shewed me four pages of a reduced facsimile (tide plate) of the Lolo MS, on satin, which the chief had sent through me to Mr. Baber, and asked me to write a paper upon the subject. He mentioned that Prof. de Lacouperie had promised him to write an explanatory paper, and seemed surprised when I told him that he had already written one, which I had seen eight or nine years ago.¹

I had been in hopes that during my year's residence in Burma, in 1892, I might meet some Lolos on the Yünnan frontier, and have thus been able to extract from them some explanation of these mysterious documents; but I never got near to them at all.

An examination of MS. No. 1, which consists of about 130 Lolo characters with their sounds attached in Chinese, discloses the fact that most of the characters are repeated: some of them six or eight times. It is also perfectly evident from their form, that these Lolo characters are based upon the Chinese. Thus we find the connected syllables, or the trisyllable sung-li-chin, occurring no fewer then eight times. The Chinese character sounds given to: sung-li-chin are the first, and the Lolo signs for the same sounds are the Chinese character is and the three written with uniformity in all eight cases. The first, namely, the Chinese character is also written by, and the second is also written by. Both are written with other slight variations, showing that the inventor of the Lolo writing must have been familiar with Chinese abbreviated writing. However, the Chinese character is easily discernible in each case, in which the last of the three symbols is used. Thus, we find that the Lolos have adopted abbreviated forms of the three Chinese characters.

No other triplets, or pairs, occur in MS. No. 1. The syllable And she foreness three times, and may be described as an abbreviation of the Chinese character for from times, and may be described as the vulgar Chinese symbol.

¹ [The MS. was in Prof. de Lacouperie's possession in 1885, for he then lent it me for the purpose of reproduction. — ED.]

for 30, pronounced sa in Cantonese, and in Canton regarded as a character. The syllable tail occurs four times, in each case the symbol differing widely, whilst having a certain analogy to the other cases, and in no case strongly resembling any Chinese character. The syllable R lü occurs six times, the symbol H in each case slightly varying; but it is unsatisfactory to see one of its forms, namely \(\frac{\psi}{2}\), also doing duty for the syllable hiu \(\frac{\psi}{2}\). The syllable \(\beta\) t'ung occurs twice, but the two Lolo symbols differ from each other considerably. The syllable Fing L occurs twice, the symbol being manifestly a slightly abbreviated form of the Chinese character II. The syllable F tien occurs four times: but the symbol is in one case the English capital __ (which also does duty for another syllable); in another the Chinese character I ; in a third two Chinese characters run into one K; and in the fourth a complicated sign, having no resemblance whatever to any of the other three, or to any Chinese character. The syllable 草 ts'ao W occurs twice. The syllable 坎 p'o 米 occurs twice. and a third time as 7. The syllable _ yih occurs five or six times as Z, L, or _. The syllable tu to occurs twice as 4 and once as 3. The syllable & ch'ung occurs hrice, but though there is a certain similarity in each case, the symbol is generally speaking tindefinite and unsatisfactory. The symbol $\bigwedge j \acute{e}n$ occurs twice, and the same remark may be made of it. The syllable 25 tui occurs four times, all four symbols differing totally one from the other. The syllable chwan occurs thrice, in each case the symbol differing seriously. The syllable 🔏 kw occurs twice, the resemblance being unsatisfactory. The syllable 🎉 ch'ang also occurs twice with the same result. The syllable chi 27 occurs four times, all four symbols being unsatisfactory.

Thus, out of the 130 Lolo symbols in MS. No. 1, we find that 20 occur 80 times, so that 60 must be deducted from the total. Of the 20 symbols which thus occur more than once, we find that less than half are at all consistent or uniform. In other words, putting the most favourable construction upon the evidence before us, all that we can say is that —

址 is	is sounded as					
5	27	"	li			
Kn	"	33 -	chin			
王	"	23	sha			
#) ; *.	**	lu			
Œ	. 11	**	pʻing			
W	33	"	ts'ad			
7	22	,,	yih			

I have, however, reserved one more symbol to the last. This is 22, the Lolo symbol for the sound ku 3/4, which occurs twice in MS. No. 1. Now, in MS. No. 2, this exact symbol is written for the idea "nine," and, turning to Mr. Baber's comparative list of Tibetan and Lolo words, I find that the Lolo word for "nine" is gu. Therefore we are enabled to say at least one thing with absolute certainty of the Lolo language and literature, and that is that 22 (the vulgar Chinese symbol for "a pair") is pronounced, in Lolo, ku, and means "nine." This circumstance, however, is somewhat robbed of its interest by the reflection that ko, kao, ku, kiu, etc., are also Burmese, Siamese, Shan, and Chinese for "nine." so that no startling novelty has been discovered.

Of the other Lolo characters written down for Mr. Baber in MS. No. 2, W "seven" is one. Referring to MS. No. 1, we find that this symbol is pronounced to ac. Referring to Mr. Baber's comparative list, we find the Lolo word for "seven" is shih (also practically a Chinese word); so that result is eminently unsatisfactory. Another of the Lolo written characters is \(\bigcup_{\text{c}}\), which might, in spite of inherent defects already described, do duty for syllable tu of MS. No. 1, did it not also unfortunately there figure as syllable kand \(\bigcup_{\text{c}}\). Mr. Baber's Vocabulary gives mu to as "fire"; but as many other Lolo words begin with mu, that syllable may be rejected as an article, enclitic, or particle; and we may, perhaps, therefore accept \(\bigcup_{\text{c}}\), pronounced tu or to, as Lolo for "fire." None of the other words in MS. No. 2 occur in MS. No. 1.

In MS. No. 3, I observe the following words, also written (with meanings attached) in MS. No. 2: —

Zz "four"

>(6 "water"

"one"

"six"

"three"

"horse"

the sound "ah'

Also two or three of the symbols found in the MS, No. 1. Three of the numerals are manifestly the Chinese

Turning now to MS. No. 4, I find that it is written in a style very superior to all the others, and, with the exception of the numerals, contains amongst thousands of characters, hardly any of those contained in any one of the other three. In fact, I am disposed to think that it is not the same written language at all: if it is, it is an improved or modified form. There are a good many Chinese characters (all containing very few strokes), and, judging by the large number of separate symbols, I think it is clearly not syllabic or alphabetical.

The missionaries in Yunnan ought really to do something to clear up the mystery of the Lole written language.

MISCELLANEA.

The Date of the Buddhist Inscription from Sravasti, ante, Vol. XVII. p. 61.

SINCE I edited the Buddhist inscription from Srivasti - Set-Mahot Lante, Vol. XVII. p. 61 ff., Dr. W. Hoey has published a translation of it in the Jour. Beng. As. Noc. Vol. LXI. Part I., Extra No. p. 60 ff, which is a decided improvement on my own translation. What I would draw attention to here, is, that Dr. Hoev has read the date in line 18 correctly sainvat 1176 instead of sainvat 1276, as I, misled by my rubbings, had given it. That saidcat 1176 is the true date of the inscription, is proved both by the reference in the text to a king Madana, who must be the king Madanapâla, or Madanadêva, of Kanauj, about whose time there can be no doubt now, and especially by the wording of verse 11 of the inscription. In the original that verse reads -

Rasadhikam-abhivyâpi Girîśa-charaṇ-âśritam t hams-îva mânasam yasya jahati sma na Bhârati II:

and Dr. Hoey's translation of it is:—" His mind, of mighty grasp and perfect taste, devoted to the feet of Giriśa, Bhârati forsaketh not, even as the swan forsaketh not the broad Mānasa lake, reposing with its vast store of water at the feet of the Lord of mountains (Himâlaya)." This is simple enough; but the two native scholars, who have furnished Dr. Hoey with this translation, deserve great credit indeed for having perceived that some of the words of the verse are so chosen as to suggest the year 1176, Giri-iśa being equal to 117 and rasa to 6.—The matter shews how dates may be hidden away in places where one would be least likely to look for them.

NOTES AND QUERIES.

THE WORSHIP OF NARSINGH IN KANGRA.

ABOUT two-thirds of the women, and some of the men in the Kangra district, are believers in The women firmly believe that Narsingh gives then sons, and assists them in all their difficulties. His worshippers keep by them a ndrjil (a sacred cocoanut adorned with flowers) and chandan (sandal-wood paste obtained by grinding a small piece of the wood on a stone made for the purpose). Every Sunday, or on the first Sunday of each Hindu month, they worlpis him as follows:-They put the narjil above mentioned on a brass-plate (tháif), and first wash it with pure fresh water. They then put a tilak of the chandan on it, in the same way that Brahmans mark their foreheads, and then an achhat, of as much washed-rice as will stay on three fingers of the right hand - i. e., on the thumb, first finger, and the second or middle finger. When this is done they adorn the adrill with flowers, and then burn some dhup. This dhup (dolomica macrocephals) is a root which comes from the Chamba Hills, hesprinkled with powdered camphor, sandal-wood, almonds, and spices. It is in the form of black pastilles, and when burnt emits a pleasant odour. The nariil (eccoanut) is then worshipped as Narsingh, and sweetnests are offered to it, which are subsequently distributed to children and members of the house holding , he worship and the neighbours, 1 Jan 1 & a 3 1 1

Nårsingh's worshippers also wear a bahutá (amulet for the arm) containing a picture of him in the form of a man. This bahutá is of silver, and is worshipped in the same manner as the nárjil. Also a ring is worn on the little finger in honor of Nårsingh, generally made of silver with a projection towards the nail. This is also worshipped like the nárjil. The worship is further conducted in a special costume made for the purpose only.

When a mother or mother-in-law worships Narsingh, her daughter or daughter-in-law must also do so. Barren women, consulting a chélá (magic-man) or a jôgi, are usually advised to worship him for offspring. Strangely enough Narsingh is believed to cohabit with these women in their dreams in the form of a Brahman clothed in white, and aged from twelve to twenty years.

When a woman gets sick a child is sent for to charm away the illness. If he says that Narsingh's anger has caused it, he orders a baithak. If she do not happen to have a bahuta, or the proper rings or clothes, or a narjil, the child will order any of them that may be wanting to be procured before performing the baithak. The ceremony of the baithak is as follows On any Sunday, or any other fixed day, the child comes with a baits, or singer of sacred songs, who plays on a dipatra, an instrument made of two tumbus (ascetic's begging howl) connected by a

bamboo rod. A wire runs along this rod fastened to its extremities so as to give out a sound when twanged. The baitr sings his songs and the chêlû repeats his magic words, when Narsingh comes and shakes the body of the women or of the chêlû. The tremors continue for two hours or more, during which the man or woman into whom the spirit has entered tells the fortunes of those attending the baithak. They are usually told to worship some deity who will cure the sick woman.

SARDARU BALHARI in P. N. and Q. 1883.

THE ORIGIN OF LAL BEG.

In the beginning was chaos. The Almighty created Balmikji, and he was placed on duty to sweep the stairs leading to the heavenly throne. One day God, out of compassion, said to Balmikii:-"Thou art getting old, I will give thee something as a reward." Next day Bâlmîkjî went as usual to sweep the stairs, and there through the merov of Providence he found a tunic (chôld, a garment worn by a bride at her marriage). Balmikit brought this tunic to his house, and put it aside, and engaged himself in other work. By the omnipotence of God, this tunic gave birth to a male child. When Balmikji heard the cry of a babe proceeding from the tunic, he at once went to the heavenly staircase, and said:-"Almighty God, a child had been born from the tunic given to thy servant." He was told in reply:-"Thou art old, this is a spiritual master (Gurt) given unto thee." Balmikji then said he had no milk for the babe. He was directed to go home, and whatever animal crossed his path, to get it to nurse the child. God moreover said that he had out of la ilaha ill'allaho (there is no God but God) created Lal Beg, and his name should be Nûrî Shah Bala. Bâlmîkjî descended from Heaven, and came to this Earth, and saw a female hare (sassi) suckling her young. He caught and brought her with her young ones, and Lai Beg drank her milk, and was nourished, and grew up. From that time the eating of hare is prohibited to sweepers. The Almighty declared Lal Beg to be the Guru, and that in every house a temple of two and a half bricks would be reared to him; and for this reason a temple of two and a half bricks is built in front of the house of every pious sweeper.

Balmikji is Valmiki, the fanous Rishi and Poet, author of the Sanskyit Rismitgana. Valmiki was by birth a Badhik, one of the imparest of men, who, informer times officiated as hangmen, or public executioners. Valmiki was a huntaman, and used to associate with the Bhills of Melwar. His conversion was miraculous, when in the act of robbing the shrine of a deity. He settled at Chitrakôt, in Bundělkhapel, at the time of the exile of Rama from Awadh — ride note to p. 3, and pp. 236 and 268 of Growse's Translation of the Bamdyana of Tulst Das.

J. G. DELMERICK in P. N. and Q. 1885.

MUSALMAN NAMES OF HINDUS.

The assumption of Muhammadan names by Hindus is not very uncommon. There is a family of Hindu Baniyas in Gurgaon who are known by the title of Shekh. They say that, in the Mughal times, one of the family was compelled to become a Musaiman, in order to save the estates of the family from confiscation, but that his descendants were received back as Hindus: (more probably his line failed of issue). Their title of Shekh dates from that event, and is now applied to the whole family, though they are all Hindus.

In Dôra Ghazi Khan there is a Hindu family in which the eldest takes the title of Khan. An ancestor Lachha Ram was a man of great bravery, and rendered good service to the local Billich Chief, who conferred the title upon him, and it has become hereditary in the family, though they are still Hindu.

DENZIL IRRETSON in P. N. and Q. 1883.

A FORM OF SWEARING BROTHERHOOD.

In the Lahore district, if a cattle-thief is in danger of being oaught, he will present a piece of clothing, or small ornament, to the daughter of the complainant or principal witness, or whoever is likely to cause his capture. The father of the girl, whother complainant or witness, is then bound to assist the thief in evading capture by every means in his power. The custom is called talli pant, or tikel pant.

D. E. MCCRACKER in P. N. and Q. 1883.

BOOK NOTICES.

PROFESSOR WEBER'S VEDIC ESSAYS.1

THE last issue of Prof. Weber's invaluable contributions to the transactions of the Berlin

¹ [See my remarks in Proper Memor of Panjahis, pp. 54, 75. — RD.]

Academy of Sciences, consists of a trio of essays dealing with Vedic subjects.

The first deals with Soma, and the author

1 Vedlache Beitrügs, von Albr. Weber. Sitzungsberichte der Königlich preuselschen Akademie der Wissenschaften zu Berlin. 1884.

shows how the word has two meanings in ancient Indian Extindegy. First, it means the blessed rain, resumed from imprisonment in the stormclouds, by the lightning-eagle (syena), as coleduated in the Suena-stuti of Vamadeva Ri. V. IV. 27, 1-3), of which the author gives a revised text and translation, with several The second meaninteresting digressions. ing of the word is that referred to in the fifth verse of the same hymn, viz. the intoxicating drink, offered by priests at sacrifices, as the most worthy gift which they could bring to the gods. Professor Weber discusses at some length the question as to what this some was. It does not appear to have been made from grapes or indeed from any kind of berry, but to have been pressed from the young shoots or tendrils of some plant. At first it must have been a pretty general drink. but, as the habitat of the Aryans in India altered, it gradually became a highly prized imported article, jealously reserved by priests for themselves. He is unable to identify its origin, beyond deciding that it can hardly have been made from the Asclepias acida, or from the Surcostemum acidum, from which soma is manufactured at the present day. He grounds his rejection of these two plants on the well-known fact that modern some is 'a very nasty drink,' and that such a brew could hardly have secured the universal popularity which some doubtless enjoyed in the earliest Vedic times Here, with great respect, I must say that I cannot follow his argument. Different countries have different standards of taste. Assafætida (let alone garlie) is an important ingredient in modern Indian cookery. Nay more, the popular intoxicating drink of Northern Central India, distilled from the flowers of the mahuwa (madhuka), is one of the most loathsome drinks to a European palate which can well be imagined. Every excise officer in Bihar and the North-Western Provinces knows too well the unnameable odour which issues from a native still, yet this very odour has been urged to me by one of my grooms as an excuse for getting drunk. He passed by a still, and could not withstand the attraction of the fragrance.3 The only European stomachs which can stand it are the dura ilia of our European soldiers, to whom its sale is forbidden by law under heavy penalties. When Tommy Atkins has run out of funds, and cannot obtain any liquor at the regimental canteen, he slinks into the bdadr. and buys a dose of what he supheniously calls

'Billy Stink.' I do not, therefore, consider that the fact, that Europeans consider the sôma made from Asclepias acida to be a very nasty drink, is any strong argument against its having been the 'Dry Monopole' of the Paūjāb in days when the world was young and Champagne had not yet been discovered.

Professor Weber's second essay is devoted to the Legend of the Two Mares of Vamadeva. the same Vamadêva who was the author of the Sucrastuti above referred to, and of other hymns. The legend is given in the Mahabharata (vv. 13178 and ff.*) It tells how king Sala, the son of Parikshit, borrowed two mares, as swift as thought. from the Brahman Vâmadêva, under promise of returning them, but did not do so, and how for this breach of promise he fell under the ban of the saint, and was done to death. A similar (but less justifiable) fate nearly befel his brother and successor Dala, who only escaped through the piety of his wife. The legend evidently dates back to a time when the strife between the Brahmanas and the Kshatriyas had been already decided in favour of the former, but was still fresh in the memory of the narrator, and the form of its exposition is very ancient. The metre shews that many of the words must have been pronounced differently from what would appear from their written form (e. g., tava has to be pronounced as one syllable, t'va), and there are, moreover, severally distinctively Vedic forms. The legend is briefly as follows:- Sala, Dala, and Bala were the sons of Parikshit by a frogprincess, whom he had won as his bride on condition that she should never be allowed to see water. When his minister saw that Parikshit. absorbed in his love for his wife, neglected his royal duties, he arranged that one day she saw a tank, into which she immediately disappeared. Parikshit, beside himself for sorrow, had the tank run dry, and found therein a single frog. who, he considered, must have eaten his beloved. He, thereupon, ordered a general massacre of all frogs, to stop which the King of the Frogs restored his daughter free of all conditions, but with the curse that, in return for the calamities which she had brought on the community, her descendants would be impious (abrahmanya). It is in consequence of this curse that Sala is destroyed, and Dala narrowly escapes the same fate.

Parikshit's name appears first in the Atharvavéda. He is there praised as a Kauravya of the palatable, which was quite impossible to myself and

Touriously enough the word madhuka, is, as Prof. Weber points out, used in the Ri. V., to mean Rima.

³ He used the Perso-Indian word kinsh-bd. [I can support Mr. Grierson. A Burman once recommended to me a antive dish of herbs, as something particularly

every other Buropean I tried with it. — ED.]

* Pratipa Chandra Riy's Translation, 1884, Vana
Parvan, pp. 585 ff.

Golden Age, not, as in the Mahdbhdrata, as a descendant of Ikshvaku reigning in Avodhvå. In the Satapatha Brahmana and in the Nahhavana Brauta Satra, we find the legend of his descendants having been guilty of sin from the consequences of which they were released by a horse-sacrifice. His three sons are there named Bhimasêna, Ugrasêna, and Srutasêna :- Sala. Dala, and Bala first appearing in the Mahl. bhârata; nor are any of his descendants brought into connexion with Vâmadêva. The latter appears in Vedic literature, as a kindly disposed middhyama Rishi of the family of Gautama, without any trace of the Mahabharata legend. Professor Weber concludes that the introduction of his name into the latter is due to a mistranslation of the word vámyau (dual of vámf). 'mares,' which has been explained to mean 'the mares of Vâmadêva.' Mârkandêya, the narrator of the legend to Yudhishthira, wished to give a warning of the terrible consequences which come from a prince annexing the property of a Brahman. He appears to have taken the tale of the robberv of the two mares (vdmyau), and to have hung it on to the legend of the descendants of Parikshit. whose wickedness was well-known, and (owing to the suggestive similarity of sound) to the name of the Vedic Rishi, Vâmadêva.

The rest of the legend has already been told. It has been translated at length by Prof. Weber. Sala borrows the mares from Vāmadēva and refuses to return them. He is beaten to death by Rākshasas at the command of the priest. His brother and successor Dala also at first refuses to deliver up the mares, but on being cursed so that he is unable to move, he restores the mares and is released from the curse through the piety of his wife.

Professor Weber's third and last essay deals with the 13th Verse of the Sáryasúkia (Ri.-V. X: 85), which he thus translates:—

Forth went the marriage procession of Surya, which Savitri sent out. In Aghas do they slay the cows, and in Arjunyau the procession sets forth, i.e. (if we substitute maghden for aghden, as in Ath. S. 14, 1, 18), in Maghas (= anylp Leon.) occur the preparations for the reception of the marriage guests, and in Arjunyau (= $c\theta\beta$ [93] Leon.), takes place the procession of Surya, the sun-bride, to the solumization of her marriage with Soma, the Moon.

This verse has been discussed by Prof. Jacobi in dealing with the age of the Rigorda. Professor

Weber tontends that it is impossible to fix a secretaring to any particular component of the sun and moon. It might refer to the common solution to the new year, to an eclipse of the compon even, merely, to a new moon. Moreover executif the passage did really give a cheen down of datum, it would be of no value as a grand Justice Chronology, if it can be proved that the Avirable nabshates series was derived from Relydon.—

a thing which he considers very probable.

He then maintains, anally, that this yerse cannot be considered as a "key-stone" for determining the age of the Rigyada, aget of found to the tenth mandala, which but may to the forginaing of the Brahmana period. Sargi fem nine is not one of the early forms of the Vedie gods, nor is Some, as a name for the moon. The verse stack is the only verse in the whole liquide in which the names of any nakshatean are ment week. The knowledge of these capacit be referred to an older date than the Brihmana period Thereis no proof that they were known in the oblige Vedic times. Finally, the verse shows some of having been tampered with. The first word of the second bemistich, aghden, meaning with a pun) 'amongst the wicked,' has been altered from magadau, 'amongst the mighty,' by the priestly easte, under the influence of Buddhista. in the post-Vedic time which prohibited the killing of the cow, just as in Ri. V. X. 15, 7. agré was altered into agail, in order to justify suttee.

The essay concludes with a brief but complete account of the ancient methods of computing time in India. Space will not allow me to do more than refer to this, for it would be impossible to give an abstract of it, and a translation would be more than is required in this notice.

GEO. A. GRIERSON.

Howrah, 11th February 1895.

PROFESSOR COWELL'S EDITION OF THE BUDDHA-CHARITA OF ASVAGROSHA?

Ir our velocese to Prof. Cowell's long louised for edition of the Buddha-cherria is tardy, it is not for want of appreciation. Suffice it so say briefly, that the text of this important work has been prepared by him from three MSS, all copies of one codes archetypus. This has naturally left more than one passage abscure from some maletected corruption in the text, but, allowing

Asyan Series, Vol. Z. Past VII.) : Oxford, Clarendon Press, 1993. Pp. XV, + 178.

¹ The Buddha-Karita of Assayhaha. Billied from three MSS. by B. B. Cowell, M.A. (Assayha Oscalensia.

to those few instances, the work is, what must necessarily come from Prof. Cowell's hands, a model of careful and accurate editing. The printing is done as only the Clarendon Press can

Of the seventeen books of which the poem is composed, only the first thirteen, and possibly a portion of the fourteenth are composed by Astaghésha. The remaining four (or three and a portion have been compiled by the scribe of the codex archetypus, Amritananda, who specially states, according to the colophon of the Cambridge MS., that he had searched for Asvaghôsha's originals everywhere, but could not find them, and that hence he had made himself the four last cantos. This is an example of a kind of literary honesty which is rare in India, and Amritananda deserves all the more credit on that account, though his poetry is of a feeble description.

Amritananda completed his copy in 1830 A. D. Asvaghosha's date is more uncertain. It is probable that he was the contemporary and spiritual adviser of Kanishka, in the first century A. D. At any rate he is praised by Hiuen Tsiang, and the Buddha-charita seems to have been translated into Chinese early in the fifth century. As this must imply that it then enjoyed a great reputation among the Buddhists of India, Professor Cowell is of opinion that we are justified in fixing the date of its composition at least one or two centuries earlier. As regards his style, his editor says:—

Asvayhosha seems to be entitled to the name of the Ennius of the classical age of Sanskrit poetry. His style is often rough and obscure, but it is full of native strength and beauty; his descriptions are not too much laboured, nor are they mere purpure panni,—they spring directly from the narrative, growing from it as natural blossoms, and not as external appendages.

This is well illustrated by some curious parallel passages occurring, on the one hand, in the Buddha-charita, and, on the other hand, in the Raghurania and the Ramayana; and it would seem that in the case of the latter, the passage by Asvaghôsha is the original, and that of the Rimayana the echo.

In conclusion, we regret to see that the Editors of the Auscolota still adhere to the uncouth system of transliteration, a mixture of Italic and Roman letters, which defaces so much of the oriental work that issues from Oxford.

NADI VIJNANA.1

The abovenamed work has been sent to us for review by the editor and translator. It contains the text and translation of two treatises on the pulse,—the Nāḍi-vijādna of Śamkara Sôna, and of the Nāḍi-vijādna of Kaṇāda. Both works cover much the same ground. The text is fairly printed, and the translation shews evidence of care. To students of Indian medicine and of the Indian principles of diagnosis, it will no doubt be useful.

The editor, however, claims consideration for the book as a medical work, fit to be studied in the nineteenth century, and it is not a pleasant commentary on English civilization to see such preposterous claims advanced within a mile of the Calcutta Medical College. It is said that 'the Hindu Physicians, by noting the condition of a patient's palse, can predict the day, — nay, the very hour when he shall expire, — whether a patient will be cured or not, and other things of a like nature.' We have no doubt that they can predict, but we should be much surprised to hear that their predictions came true. It is easy to call spirits from the vasty deep; but do they come?

The following extract from the translation will show the kind of learning upon which these predictions are founded:—

"When a person imbibes a sweet flavour, his pulse courses like a peacock,—when he takes a bitter one, it courses like an earthworm; when he takes anything acid, being slightly heated, it courses like a frog; and when he takes anything pungent, it courses like a Bhringa-bird."

It is possibly comforting to the unlearned to be informed that each corporeal being has thirty-five millions of blood-tubes, gross and fine (a number which is known by inspiration, and not by actual counting), that they are fastened at the navel as at a root, and that some are set obliquely, some upwards, and some downwards; but most people would probably prefer to employ a doctor who believed in the action of the heart and in the circulation of the blood. As a textbook, the work is worse than useless, but it has its value to students of Sanskrit literature and of the history of medicine.

nal Sanskrit by Kaviraj Dhurmo Dass Sen Gupta: Calcutta, 1893. Price 1 rupee.

ON THE DATES OF THE SAKA ERA IN INSCRIPTIONS.

The contract was a special of the first the contract of the co

BY PROFESSOR F. KIELHORN, C.I.E., GOTTINGEN.

(Continued from p. 17.)

NOW give a general list of Baka dates! which is similar to the list of Vikranea dates, published in Vol. XX. of this Journal. In addition to the 200 dates, the fall details of winch together with the calculated results have been already given, this list contains the dates which do not admit of verification, those the exact wording of which appeared to be doubtful, and a number of irregular dates not treated of belove; but it also gives some regular dates which have only lately come to my knowledge. Throughout, the year of the date has been marked with an asterisk, whenever it can be combined with the Jovian year, mentioned along with it, only as a current year. And dates the calculation of which has yielded no satisfactory result, and which have not been included in the proceding list, are distinguished here by a cross, added to the last word of the date. - The list will be found to contain all the Saka dates published in this Journal, the Epigraphia Indica, Dr. Fleet's Páti, Sanskrit and Old-Kanarese Inscriptions, Dr. Hultzsch's South-Indian Inscriptions, and Mr. Rice's various publications (excepting the recently published Epigraphia Karnataka), and most of (if not all) those in the Journals of the Asiatic Societies, etc.; but from the Inscriptions Sanscrites the Campa et du Cambodge only the earliest dates, up to Saka-minvat 598, are given here.

General Chronological List of Saks Dates.

- 1. P. 10, No. 166.2 S. 169, Prabhava, Phalgun-amavasya, Bhrign-varê. Tanjere spurious copper-plates of the Western Gauga Arivarman (Harivarman).
- 2. P. 10, No. 167. S. 261,* Vilambin, Karttika-audi 13, Soma-varê. Mudyanûr spurious copper-plates of the Bâna Malladeva-Mandivarman.
- 3. P. 11, No. 168. S. 261, Vibhava, Pausha-vadi 14, Sôma-vàra, utturâyaṇasamkrânti. Spurious date in the Kalbhavi Jaina inscription.
- 4. S. 272 (?). Ante, Vol. VII. p. 178; Mysore Inser. No. 156, p. 233. Hardan sparious copper-plates of a son of the Western Gauga Vishnugopa:-
- (L. 9). Saga[nayana gi neyā] Sadharana iammachhubharada Phalguna ma amavase Adivâradandu.+
- 5. S. 310. Ante, Vol. IX. p. 294. Pimpainer spurious copper-plates of the Chalikya Satyasraya (Pulikėsin I. or II.) :--
- dus Stareshy may a m tri(tri)sha (L. 1). — Sakanripa-kal-atita-samvatsara-satiraha samvatsara-mâsa-paksha-divasa-pûrvvûyên=tithau.
- 6. P. 9, No. 163. S. 368, Tarana, Philippe amarinyd, Briba-vara. Bangalore spurious copper-plates of Vira-Nonamba.
- 7. P. 11, No. 169. 388, Māgha śudi 5, Sēma-vāra. Merkara sparious copper-plute of the Western Ganga Avinita-Kongani.

I I mean by this dates which distinctly refer themselves to the Salas, era. The only exception to this is the date No. 7, of the year 388, from a spurious record. - The Issuriations Semewifes du Chemientes have served wake dates which neither costain a reference to the era employed nor even a word for 'year.' Compare e. g. p. 87, v. 21, Kha-nava-mūritibhir; p. 88, v. 29, vigad vil daht-sihihritakhirojyah; p. 18, C. v. 2, dot. unn martibhir; p. 144, v. 10, véda dvi vila-rájyaklik; p. 106, v. 2, véda dzi naza-rijyakhlik; etc.

³ The references by page and number, here and in a similar manner under other dates, are to Vol. XXIII.

s By the monu-sign system Satharaga ended on the 7th September, A. D. 456, in C. 275 expend; and by the pp. 113-134, and this volume, pp. 1-17. southern luni-selar system Skithäruna would be 3. 272 capited.

THE DEVIL WORSHIP OF THE TULUVAS.

FROM THE PAPERS OF THE LATE A. C. BURNELL.

(Continued from page 158.)

BURNELL MSS. No. 15-continued.

THE STORY OF KOTI AND CHANNAYYA-continued.

They mounted the hill of Panja, and when they had ascended it, they spread, in the cool air, under a Banian tree, a blanket bordered with lace.

- "Brother! Brother! Kôṭi Baidya! Is it not true that the lice on our heads were born at our birth?" asked Channayya. While the younger brother lay with his head on the elder brother's leg, and while the elder brother was searching for the lice, Channayya saw a company of boys playing together. A thousand cows and a she-buffalo were feeding on the grass in the plain of Pañja.
 - "Brother! I will tell the boys a lie, "13 said he.
- "Do not, Channayya! If you tell them one, they will answer nine," said he. Channayya did not listen to his elder brother's advice, and said: "Boys, a bullock in your herd of cows has brought forth a calf and is licking off the dirt on the calf with its tongue!" said he.

⁸⁴ Raktâkshî should be S. 1306 expired.

⁴⁵ In S. 1815 expired = Srimukha Ashājha-sudi 10 ended 2 h. 20 m. after mean suurise of Friday, the 20th June, A. D. 1898, when the nakshatra was Visākhā. The nakshatra was Anurādhā (the Mitra-m.) from 1 h. 58 m. after sunrise of Saturday, the 21st June, A. D. 1893.

¹³ For 'lie' read the 'riddle' of folktale and legend.

"We will ask you another saying and answer your question," said the boys. "Heroes! What is that fire that is burning on the sea in the countries from which you come?"

Then Channayya growling with rage ran to beat the boys.

- "Do not brother; do not! Let us ask the way and description of the villages," said Kôţi. "It is not in your herd of cows that the bullock has brought forth a calf and cleans it."
 - "But is it not a cow that brought forth a calf?" said the boys.
- "Boys! It is not fire that burns on the sea, but it is the sun that rises in the East, and sets in the West," answered they. "Boys, give us a description of the roads and villages."
- "If you go by the road to the right, you will reach the chávadi of the Édambûr bidu. If you go by the road to the left, you will arrive at the chávadi of Kemire of Pañja. If you go by the road in the middle, you will reach the house of Bannaya of Palli," said the boys.

The heroes asked for a description of the house of Bannaya of Palli.

"A large cow-shed, a house with an upper storey, a well covered with copper plates; a seat round a red cocoanut, another seat round a sarôli tree on the northern side. These are the marks. If you want to go there, you had better pass the yard, stand at the small opening made with two posts fastened together, and call the house people," said the boys.

Thus went the heroes there and called "Palli Bannaya! Palli Bannaya!"

Bannaya's wife heard the second call and answered the third call, and asked who they were?

- "No one, but we who are going along the road. Is Palli Bannaya here or not?" said they.
- "He is, but he went to draw túri in the Sanka Malla Forest," said she.
- "If he is gone now, when will he return back?" asked they.
- "He will return at noon; and if he goes again at midday, he will return back in the evening." said she. "If you are Brahmanas, who wear the thread, there is a bench with three legs at the round seat under the red cocoanut. Sit down on the bench. If you are Wakkatas and Baragas, I have spread a mat over the seat at the sampika tree. You can sit down on that. If you are my caste-people, there is a small cottage. Come and sit down there," said she.

They heard it all and went to the seat at the sampika tree, spread a blanket bordered with lace, and sat down, and also put their dagger and a bow across their legs. The elder brother Kôṭi opened his betel-nut bag of the colour of a parrot. Seeing this, the younger brother said that he would open his bag of the colour of the pula bird. Then the brothers chewed betel-nut and the effect was to make Channayya senseless.

- "I shall not remain, I shall not live in the world," said he.
- "Who is there? O mother, give us a jug of water," said Kôṭi. "As there is no male here, I cannot come down from the roof of the house, and cannot come down the stairs," said she.
 - "We are as your brothers, who were born after you," said they.

Having heard this, she went inside, took a jug of silver and went to the seat by the well She held a pikotta, which was so high as to reach the sky, let it down and drew pure water from the bottom of the well. She washed her face and took the water home. Then she took a mat, the water and a plate of betel-nut.

- "If we must drink water from you, you must tell us your caste, your relations, and the names of houses, where you were born and where you were married," said they.
- "In the country of Parimal and in a place called Kariya Arad, there is a house called Geijinanda Yaramane. My mother's name was Deyi, my father's Sâyi. I am related to Kirodi Bannâl. I am poor and am nicknamed Dâru," said she.

They looked at one another and spoke a strange language, and then they language at her.

- "Brothers! do you laugh at my foolishness, or at my beauty?" asked she.
- "We did not laugh at your foolishness, sister! How many children had your mother?" asked thev.
- "I had one father and two mothers, but to my mother, I am the only daughter. I heard that my younger mother has two children, such as none have yet been born, mr will such be born hereafter. They are committing many crimes, and go about murdering. I have not seen them vet." said she.
 - "We are your brothers," said they.

She took the jug of water and poured it on their legs, and said :- "I am your elder sister !"

She thought to herself that they were related, and so she embraced them. She took them into the inner part of the house, and made them sit on a swinging cot. She made a small seat of mud and cleaned it with cow-dung. She got ready a clean cloth. She purified them all with red fire. She came out, took the dagger and bow, and put them on the seat She held out some grass and called a red cow that had gone out to graze. She drew five sers of milk from the cow and boiled it down to two sers. She took the milk and called to them.

- "We will not drink water, as there is enmity between us and Palli Bannava!" said they.
- "Do you come to go away again, or take the jewels off my nose and off my neck?" asked she. "I have not yet taken off my earrings. I am a young girl. If you are old enemies, keep such enmity back. Drop your enmity and drink water," said she.
- "We do not think good and bad of the house where we have drunk milk. We do not destroy the house where we drink milk. We do not ruin the place, where we have sat down!" said they, and chewed betel-nut. When they sat down, the man who had gone to the forest of Sauka Malla returned, carrying tari. When he entered the hut called Mungil, he said to his wife: --
 - "What is it that I hear? the sound of the swinging cot?"
- "O husband! you have mocked at me up till now for having no family. They are your brothers-in-law and my step-brothers," said she.
- "Have you done what you should not have done?" said he. He went out through the opening of a screen and ran away.
- "Where are you running, Palli Bannaya?" asked Kôți and Channayya, and called out to him.
 - "I believe in you, Kôṭi, but not in your brother," said he.
- "A wild fox ever looks behind while running, but you cannot do even that. He is not such a younger brother as to disregard his elder brother's advice," said Kûţi.
 - "You had better come back! Palli Bannaya! Palli Bannaya!" said they.
- "Payya Baidya!14 let us go home!" said they. "We hear that you are the confidential servant of Kemira of Panja. Will you kindly introduce us to him?"
- "I was the servant of the former Ballal, but the present Kemira is a fool and useless. I am not his servant! His servant is one Sanda Giddi," said be.
 - "Will you show us Sanda Giddi's house?" said they.
- "I will show it to you, heroes! But you had better go to your sister's house!" said he. "We shall go to her on our return. Take as now to Sanda Giddi's house," said they.

"I and Sanda tilled have I can at enalty for a long time, but I will show you his house at

So they went and called "Sanda Giddi! Sanda Giddi!"

When they called him, he was not there, but his wife answered the call.

- "He went to a garadile at Peru Perumandê to teach boys to write and play," said she.
 - "4) girl! why did he go to the garadi at Peru Perumundê?" asked they again.
 - " He went to teach boys to play," said she.

Then they went to the garadi at Peru Perumundê. Sanda Giddi saw them from a distance, sent away all the boys, and sat still, shutting the doors on all the four sides. The heroes went three times round the garadi.

"Let us see if there is any entrance to this garadi or not," said Channayya.

So they broke down the frame of the door, and the stone doors themselves. They entered. and stood in the middle of garadi.

- "If we are to fight seven battles, you can tell me how many kinds of lizards there are here?" said Channayya to Kôţi.
- "There is a green lizard and there is a blue lizard," said the elder brother. Then they examined the four sides of the garadi and found Sanda Giddi standing like a lizard behind a kunlod post.
 - "Why did you stand there, Sanda Giddi?" asked the younger brother.
 - "I concealed myself from my creditors, but I do not know who you are," said he.

They asked him who the teachers and scholars in the garadi were.

- "They who came after me are pradanis (ministers), and I am the king!" said he.
- "I went to examine the king, fought with him and put him on a rafter with his dagger. Now who is pradani or king?" asked Channavya.
 - "Now they are kings who came after me, and I am a pradani," said Sanda Giddi.

Sanda Giddi took them home and shut the doors of the garadi. As soon as he got home, he called his wife, ordered her to clean a hut, to purify it, to wave fire over it, and to spread a mat.

"You heroes, sit down awhile, as the sun is hot," said Sanda Giddi.

Sanda Giddi went out with a dirty sickle and with a blunt sickle. He went to the châvadi of Kemira at Pauja, and told the people that the two heroes had come.

"If they stay in this country they will not leave even a single village standing. We should somehow try to kill them; at any rate we should put them in prison," said Sanda Giddi to Kemira. "Do you hide yourself upstairs. Let them salute Jaru Kottari, the son of the concubine Siddu, instead of you."

Then he went home and took the heroes to the palace. Sanda Giddi went and saluted Jâru Kôţţâri.

"If we are to salute, let us see who is the master and who are the servants," said Channayya.

So they looked round and saw Kemira of Panja murmuring and biting his lips.

"Bo not act like a buffalo. We did not come to ask about the debt. Thistles grow not on the road by which we came and we had better return back," said the brothers.

Kemira Ballal came down the stairs and thrust out Kôttari by the neck, and sat on his throne.

"Heroes! I did it wantonly to try you," said he.

¹⁵ A public school house.

Then the heroes saluted him.

"Have you seen the palace yet, which I have built," asked the Bullil.

He took them inside and made signs to every one, wherever he went. Kemira went first, and the heroes followed him. When they went on, the doors behind them were shot, and logs, too, were placed across the doors. Kemira of Panja went out in front, and all the doors were shut in on the brothers.

"Ah! we crowed at Parimâl like a cock, but the day approached near for sighing at Pañja like a hen," said Kôṭi. "If I am a strong youth, I can break down this palace," and he pushed with his shield like an elephant.

He threw up the soil like a deer. He became small as a peacock. He trod down the walls by force, and made an opening by which an elephant could enter.

- "Ho, elder brother! if you want to go, you may," said Channayya. Kôti went out, pushing aside with his dagger a stone, which could only be drawn by fourteen elephants.
 - " Ho, younger brother, sit down on that stone," said Kôti.
- "I shall come, too, Kôți Baidya! Do you go and sit down at Bâlitimâr, the paddy field at Pañja."

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.L.E., LC.S.

(Continued from p. 169.)

Earth. — As a blood stauncher, a poultice, an application for strains, a cure for diseases, 47 and a stayer of hunger pangs, earth holds a high place among spirit-scarers. To lay the ghost of the dead, the Musalman gives it earth; the shade of the unburied mariner prays the Roman for the scanty present of a little dust; 48 the English mourner is directed to drop some handfuls of earth on the coffin lid. The red earth of a white-ant hill is a common Indian cure for a strain, and it is used as a poultice by the Khonds. White-ant hills are considered sacred by Hindus. According to the Bhágavata Purána, dust taken from a cow's foot-prints, cowdung, and cow-urine were used in driving away spirits from the infant god Krishna. At Pandharpur, when a Brahman pilgrim bathes, he takes earth from the bed of the Bhâmâ, rubs it on his body, and says:— "Earth, free me from my sins and misdeeds, that, my sins being destroyed by thee, I may reach heaven." Hindu women with child and young children eat a white pipe-clay, which, before it is eaten, is generally baked black, but is also sometimes eaten raw. It is called "edible earth" or khâyûchi mâti, and is sold by gândhîs or grocers, and by grain-parchers called bhârbhujûs (G.) and chank kurmurivâlâs (M.)

⁴⁷ In Dhàrwâr earth is used in the following cases:—(1) To stop an issue of blood, easent from an old building finely pounded and dissolved in water is kept in a pot till the heavier parts sink to the bottom, when the clear water on the top is given to the patient to drink. (2) In pregnancy, a discharge of blood is arrested by drinking white earth, (gipichandana) mixed with curds. (3) To allay thirst in fever, white-ant earth, boiled in water, is given to the patient to drink. (4) In cases of seminal discharge, whitish clay powder is mixed in water and given to the patient to drink. (5) To cure an outbreak of small pimples, red earth or clay, called sincide, is mixed in oil and rubbed over the body. (6) When a pregnant woman is in pain, white earth dissolved in rice water is given her to drink. (7) A stye is cured by rubbing on it the powdered earth of a piece of pottery. (3) Swellings are reduced by applying black earth heated and dissolved in water. (Information from Mr. Tirmalria.) In Highiawir a special red earth is used to reduce internal swelling. Earth is also largely used for external application, in cases of enu-struke and of wasp and other stings. An application of earth cools the head and cyclids. Bleeding from the none is stepped by smelling a piece of wet earth. The application of avails (Emblica officinalis) leaves, earth, and salt cures the contraction of joints. (Information from Mr. Himmatial).

[#] Information from Mr. S. V. Kimat.

In the Konkan, among Kunbîs and other lower classes, when women visitors enter a room where a new-born child is laid, they take a pinch of dust off their feet, wave it round the child, and blow it into the air and on the ground.53 In Thana, when a mother goes out with a young child on her hip, if she cannot get lamp-black to rub between its eyes, she takes dust off her left foot and rubs it on the child's forehead.54 In Thana and in many other districts of the Könkan and the Dekhan, the second day of the Hôli festival, which is the beginning of the new field-year, is the dust or dhul day, when people throw dust on each other. If a Dekhan Mhar is possessed, the exercist takes a pinch of dust off his own feet, and rubs it between the eye-brows of the possessed person, and the spirit leaves his body. The Dekhan Chitpâvan priest, at a marriage, rubs bundles of betel-nuts with sand, and sprinkles water over them. The Chitpavan boy, after his thread-girding, is told to rub his hands with sand before he washes them, and the Chitpavan girl, on coming of age, is rubbed with seven kinds of earth and bathed.55 On the fifth day after a birth, the Poona Salis scatter grains of sand about the image of Sathvâi.56 The marriage guardians of the Lôdhîs, a class of Hindustani Hindus in Poona, are pinches of dust picked from five ways, and laid before the house gods.⁵⁷ The Poona Rauls lav handfuls of dust on the grave.⁵⁸ The Dekhan Kunbis. at the Holl festival, throw mud and dirt on every one they meet.50 The Dekhan Ramosia on the dirt-day or dhulvad, the second day of the Hôli festival in March-April, carry about pots of earth, and if they meet a well-dressed man throw the earth on him, and ask him to come and play and wrestle. 60 The Poona Châmbhârs put sand under the mother's pillow after child-birth and, when they bury the dead, the body is laid on the ground and all present throw handfuls of earth on it. The chief mourner among the Poona Halalkhors throws a little earth on the body before the grave is filled. In the Dekhan on pôlá or bull's day (July-September), cattle are rubbed with red earth. Among the Ahmadnagar Bhôis, the chief mourner throws earth on the dead.63 Earth was an early food or stayer of hunger. In the terrible famine of 1903, in Ahmadnagar, in the Bombay Dekhan, tamarind leaves mixed with white earth were made into a jelly and eaten.4 Among the Satara Mhars, when the body is laid in the grave, the chief mourner throws a handful of earth over it.65 The Killikiâtar wanderers of Bijapur rub their cheeks with red earth.66 People suffering from venereal disease come to the Qâdarl's tomb at Yemnûr, in Dhârwâr, and smear their bodies with mud, that they may be cured of the disease.⁶⁷ The Bijapur Rajput, before a marriage, sends a near kinsman to the banks of a stream or the side of a pond. He worships a plot of earth, spreads his waist-cloth over it, opens the earth close by with a pickaxe, gathers as much as is loosened, lays it on his waist-cloth, and carries it home. He spreads the earth in the marriage hall and on it sets the image of the marriage guardian.68 The Bilejadar Lingayats of Dharwar throw handfuls of earth on the body in the grave. If a Dhârwâr Dêvâng girl, who belongs to the ling-wearing division, marries a man who wears the thread, to purify her, she is first rubbed with earth and white ashes, a blade of darbha grass is passed over her head, and she is oiled and bathed in warm water. 70 The Kābāligārs, a class of Dhārwār beggars, rub their brows, shoulders and eyes with red earth.71 At a Dharwar jangam funeral, all present lay a handful of earth on the body, after it is seated in the grave.73 Karnatak Brahmans, at a thread-girding, fill five pots with red earth and worship them. 3 Shôlapur Lingayats put in the grave dust from the jangam's feet, and, when one of their girls comes of age, the jangam throws dust from his feet on her body, and she

is nure.74 Among Shôlapur Mhars, the chief mourner scatters worth on the dead body, the other mourners follow, and the grave is filled. A sacred vellow each found to nond in West Kâthiâwâr, called milkmaid's sandal wood, or no remotion, is need by Vaishnavas to make the brow-mark. Jain mourners, on going home after a funeral, wash their hands with earth and water.

The Kols swear by the earth of a white ant-hill.77 Dust from cress roads is worn he Hindus as an amulet against the Evil Eye.78 In Bengal, when a mother takes her child out of doors, she rubs its forehead with earth or the end of a lamp-wick, and spits on its breast.79 In Bengal, women clean their hair with mud. 10 At the great annual bathing of the goddess Durga, she is first washed in earth thrown up by a hog's touth gathered from the door of a courtezan, or from an ant-hill. In rude stone-tombs on the Nilgiris, in 1832 and 1847, urns were found full of black earth and bones, 22 In his daily bath, a Hindu should rub himself with mud.33 In Bengal, the dying Hindu has his head sprinkled with water and smeared with clay from the Ganges.84 Fryer, in 1673 (p. 115), mentions a man at Smut trying to cure dysentery by setting a pot filled with dried earth on the patient's navel. The Egyptians, he says, had a similar practice. At Sûrat, in 1640, to avert a drought, Brahmans went about carrying a board with earth on it on their heads.35 Scented earth is used as sean in some parts of Hindustan.86 That rubbing with dust purifies a man was one of the ideas attacked by the Buddhists.87 Hindus and Pârsis use earth to clean their cooking vessels.79 So before praying, if there is no water, the Musalman may cleaned his face, hands and free with sand. The Parsis purify with dry earth. When they have cut their nails and their hair, they make the parings and clippings into a little heap, and pour earth over the heap, so that demons may not enter into the parings and clippings. In Persia, during their month'y sickness, women lived in a separate room strewn with dry dust.91 Among the Beni-Isra'lls, each mourner stuffs a handful of earth into a pillow, and it is set under the dead man's head in the grave. Afterwards each mourner throws a handful of earth into the grave.22 The belief that spirits fear earth was perhaps the reason why, after a death, the Jews covered their heads with dust and ashes. In Central Asia, people scrape a little earth from the grave, carry if home and rub it on the breast to lessen grief.53 Khurd women at funerals throw handfula of earth on their heads, and tear their clothes.94

The Andaman Islanders use clay as a cure in illness, 25 and women with child eat clay."" The Andamanese cover the body with clay and sand as a protection against vermin.97 The Australians also cover their bodies with coloured earth mixed with oil.* Among the Chinese armlets of perfumed clay are strung on thread and worn as charms.** The Australians cure a wound by sprinkling it with dust. 100 A poultice, of Nile mud, is a certain cure for a scalded head. 1 Some Madagascar tribes plaster their faces with white earth, as a cure for certain complaints.2 Hottentot women paint themselves with red ochre when they pray.3 In East Africa, red clay is eaten by Mahenge women.4 The Wagogos of East Africa (and many other

The second secon

three, sincer themselves with red earth. The Warundis of East Africa smear themselves with not warm and oil. The Kafirs rub themselves with red clay. On the Guinea coast, hot sand is used as a styptic. Käfirs near the Cape of Good Hope covered their bodies and cloaks with other-coloured earth mixed with grease.9 In South Africa, says Dr. Livingstone, those who go to salute the chief rub the upper arm and chest with ashes.10 The emperor of Morocco puts in the head-dress of his horse a small pouch of scarlet leather, in which is earth from a holy tomb, 11 In Dahomey and on the Congo, people throw earth on the head when paying respect to superiors, 12 When the king of Dahomey goes to his chief priest the king throws dust on his ewn brow.13 A Hottentot in pursuit of a wounded animal throws sand into the air. and the strength of the animal fails.14 Hottentot women spread red earth and sweet herbs on the heads of their gods.15 A bag of sand is one of the chief Madagascar idols.16 The Papuans of Ontanata River in New Guines plaster their bodies with sand and mud;17 rub white clay int , cuts to make scars;18 and smear their foreheads and faces under the nose and round the chin with red clay.19 Some Dutch sailors looked at a newly-born Papuan baby which was laid on the sand: the mother saw them, dragged the child to her, and sprinkled sand over its eyes and ears, and then over its whole body: she then laid it under leaves.20 South American Indians eat clay called ppassa.21

A resident of New York and a magistrate, sufferers from indigestion, copying the practice of birds, adopted a diet of sand and were cured.²² "Blessed earth" is put in the Roman Catholic coffin.²³ In Russia, earth is thrown on the coffin by the priest, and by each member of the family.²⁴ In the Middle Ages, in Europe, when a nun was consecrated, her relations, as a sign that she renounced all her earthly possessions, threw earth on her arm.²⁵ The Chronicon St. Bestini relates how Richilde, before her fight with Robert the Frisian, threw dust in the air against the Frisians with formulas of imprecation, but the dust fell back on her own head in token of her speedy overthrow.²⁶ An early form of cath among the Hangarians and Slavs was for the person who swore to place earth on his head.²⁷ In a cairn in Northumberland was found an urn with bones, charcoal, ashes, and fine foreign red carth.²³ Rubbing with earth cures ringworm in Northumberland.²⁹ At Newcastle-on-Tyne sand is strewn on the pavement for bridal parties to tread on.³⁰ When the death straggle is prolonged, church dust is brought to the death-bed, and the sufferer dies soon and in quiet.³¹

Eggs. — Eggs as an early food and physic scare spirits. Again the egg, as the house of the chick, is a spirit home and so the egg pleases and lodges wandering spirits. Kônkan Kúnbis give a mixture of eggs and turmeric to a person who spits blood;³² and to remove the affect of the Evil Eye they wave bread and an egg round the sick.³³ The Velâlis or Pelles, a Tamil tribe in Poona, offer eggs on the fifth day after child-birth to the knife which cut the navel cord.³⁴ The Sultânkars, a class of North Indian tanners in Poona, when their wives are possessed by evil spirits, offer rice, a fowl and an egg, and the spirit goes.³⁵ The Beni-Isra'îl babe is daily rubbed with turmeric and the white of an egg,³⁶ and to avert evil the Beni-Isra'îls.

break a hen's egg under the forefoot of the bridegroom's large. In Chicas days are to eaten by women at and after child-birth,38 At Teesee, in West Africa, no actual Contest on good On the Gold Coast of Africa, the fetich man cures disease to hashard each the highway.40 In Russia, Germany and North England, Easter Eggs are painted and with the a sign of the resurrection.41 Good Friday Eggs never go bad.42 In Septand, on These than eggs are kept boiled and painted.43 In England, there was a very old and mide-spread and of making presents of eggs on Easter Day: the eggs were pointed vellow or sails there eggs were emblems of the sun, and could put out a fire and cure disease. In England, the side of of eaten eggs are broken in case the devil should fit out the shells as a territory and On the first visit of a babe to a neighbour's house, it should be given an egg, and some sit and white bread.46

Feasting. - Feasting scares the demons of hunger, thirst, weariness and sadness. Also feasting is a great spirit-housing rite, the feasters being inspirited by the entrance into them of family and other unbodied spirits. The Parsi, says Anquetil Du Perron, " believes he henours God by nourishing himself. A fresh and vigorous body makes the soul more able to resist evil spirits.48 At the close of all their leading ceremonies, at births, thread-girllings, marriages, and deaths, Hindus hold a feast. Among the Madhava Brahmans of Dharwar, when a child is three or four months old and begins to turn on one side, a feast is held, and cakes, called kudbus, are made and eaten; when the child learns to fall on its face, cakes of wheat thour, called pôlis, are made and eaten; when the child first crosses the threshold of a room, other cakes of wheat flour are made and eaten; and when the child begins to press one palm on the other, sweet balls are made and eaten. 49 The Telugu Masalarus of Dharwar, on the fifth day after a death, hold a feast, kill a fowl, and eat its flesh. 50 Belgaum Salis, on the fifth day after a birth, present women guests with turmeric and red powder, and feast children.51 That the object of evremenial feasts is to scare spirits, is admitted in the practice of the Kanara Roman Catholics who, on the day before marriage, give an almá chém jevan, or soul's dinner, to satisfy the spirits of the family dead. 52 When an Ahmadnagar Hindn is affected by the planet Saturn, he calls a Mâng, feasts him with millet, pulse and oil, and gives him an iron nail or some cotton. On the third day after a death, the Gonds hold a feast and eat the spirit-scaring cock, and drink spirit-scaring liquor.54 When the dead body is buried the Maria Gonds kill a cow, the great purifier and spirit-scarer, and drink its blood.55 A year or eightcen months afterwards they sacrifice a fowl near the tree, where the dead was buried, and there, for two or three days, men and women dance, drink and enjoy themselves without restraint.22 The new-moon day is a spirit day. So, strictly religious Hindus on a new-meon day worship their ancestors and hold a feast in their honour.57 After a death, the Beni-Isra'ils give a feast on the seventh day, also at the end of one month, finally at the close of three months, six months, and of a year.5a The Persians passed their decisions under the influence of wine, the sense being that the spirits of the wise dead entered the drinker. All over Germany a grand annual excursion of witches takes place on the first night in May. On the first of May the periodical assizes were held together with merry May-ridings and the kindling of the secred fire. " In

England, feasts of cross-bans used to be given to sailors on Good Friday to keep away storms. In A trace of the spirit-scaring aim of the funeral lives in the English⁶² funeral practice of setting a block scarf and some biscuit soaked in wine, in the bee-hive mouth.⁶³ In North England, the birth of a child is marked by great eating and drinking of tea, brandy, short-bread, buns, and the groaning cheese, a piece of which was given to each young woman to lay under her policy and dream of her lover.⁶⁴

(To be continued.)

NOTES AND QUERIES.

A STORY OF VALMIKI.

Bål Mik Rishi, better known as Vålmiki who wrote the Riminana, was, according to Karnal tradition, a great hunter before his conversion. Holy men brought him to a sense of his sin, and would set him a penance. They argued thus: "To say Ram Ram would be the most appropriate penance. But so holy a name cannot issue from the mouth of so sinful a man. He shall therefore say Mrs. Mrs. which after all comes to very nearly the same thing, if you only say it fast enough." Years afterwards the holy men passed that way again, and sat down on a huge ant-hill to rest. Hearing a strange buzzing inside, they laid their ears to the ground, and heard issuing from the centre of the hill a faint "Mra Mrs." "Narayan!" said they, "it is the hunter we set to do penance!" And so it was. So they dug Bål Mik out, and he became exceedingly holy. This was at Bâlû, in the Nardak, or uplands, of the Karnal district.

DENZIL IBBETSON in P. N. and Q. 1883.

SAUKAN MORA.

The saukan mora, or rival wife's crown, is a small wall-plate of silver, worn as a locket by all classes round the neck of a subsequent wife married after the death of a previous one. It is put on at the marriage and worn till death. At the same time cil, milk, spices and sugar, are poured on the former wife's grave as a peace-offering. The saukan mord represents the dead wife, and all presents—clothes, jewels, etc., given by the husband to the new wife—are laid upon it before being worn, with the formula: "Honoured lady, wear this (dress, jewel, etc., as the case may be) first, and afterwards let this poor slave have your cast-off clothes."

At the 'Idu'l-fitr (end of the Ramzan fast)

Muhammadan women always wear new clothes, but second wives invariably offer them first to the saukan mérá.

The charm is worn as a preventive of evil caused by the dead woman's jealousy, not so much of the new wife, as of the husband. Illness or death of the latter soon after marriage is invariably put down to neglect of the saukan mord.

F. A. STEEL in P. N. and Q. 1883.

KALI IN GARHWAL AS A DISEASE DEMON.

The goddess Kâlî lives on the top of a mountain, called Bhadan Garh, about four miles from the Gwâldam Tea Estate, and is considered to be the sender of all kinds of sickness. So if any epidemic breaks out in any village or district near it is put down to her, and the people at once go to her temple on the top of the hill, where they offer sacrifices of buffaloes, goats, fowls and pigs. The Hindûs proper offer the goats and the outcaste Dôms offer the other animals.

With the animals is offered a substance called parsút, consisting of ghi, flour, and gur (unrefined sugar). Near the temple where the animals are slaughtered is a stone cup, rather larger than a big breakfast cup, imbedded in the ground. If the blood from the slaughtered animal fills the cup the goddess is appeased; but if the cup be not filled she is angry, and the epidemic will not soon leave the village.

The suppliants, too, promise at the time that if the goddess takes away the sickness they will again in twelve months' time make another sacrifice. This promise is religiously kept, as if it were broken they believe that every man, woman, and child of the offending village would be destroyed.

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.LE., I.C.S.

YContinued from p. 220.)

EATHERS. - Peacock feathers are considered sacred by the Hindus, and are used for fanning idols. The god Hirava of the Varils and Kûlîs of Thana is a bundle of peacock feathers. At the Dîvûlî (October-November) Varli boys of Thana put a peacock feather into a brass pot, and dance round it.55 The Modi, or Korvi, sorcerers of Belgaum wear feathers in their turbans.66 Hindu messengers used to wear a feather in their head-dress.67 Feathers were the common ornaments of Epyptian gods.68 The early tribes of Australia wear feathers, teeth and fish bones in their hair.69 The people of New Britain, east of New Gainea, deck their hair with gay feathers.70 The Melville Islanders fasten a feather in their hair.71 Feathers are worn on the head by the Harvey Islanders.73 The Motus of New Guinea wear the feathers of the cassowary as a head-dress.73 The Easter Islanders wear a crown of grass round which feathers are stuck.74 The state carpet of Hawsii, in the Pacific, is of mathers.73 The Niam-Niams of Central Africa wear a plume of feathers.76 The Wasagaras of the East African hills wear vulture and ostrich feathers in their hair." Many Africans and Americans wear plumes in their hair. In South Africa a pink feather is a sure guard against lightning.78 The Dinkas of the White Nile wear ostrich feathers in their hair." Feathers are worn by the priestesses of Dahomey.80 Among some American Indians a head-dress full of feathers is sacred. In Russia, feathers are worn on the head only by married ladies. In Russia, feathers used to be laid on the face of the deal." The Pope is always accompanied with flabelli, or feather fans.84 The badge of the Prince of Wales is of ostrich feathers.

Flags. - Flags are lucky. They scare flends and they house guardians. So on their New Year's Day, on the 12th of January, most high class. Hindus in the Dekhan and Kônkan chew nin leaves with sugar, and set in front of their houses a bamboo note capped with a brass or silver pot, and with a new piece of cloth hanging to it as a flag. 90 The pole is often adorned with flower garlands and mango leaves.37 Four small flags are set in the ground where the Poona Dhruva Prabhu is burnt, 88 The Ahmednagar Dhôrs plant three small red flags on the grave. Several large and small flags are set in front of the three-cornered mound. which is raised where a Dhârwâr Mâdhava Brâhman has been burnt.90 The Rattus, early Hindu chiefs of the Karnatak, carried banners with a fig tree and a garad, or eagle, and used the mark of a lion.91 In Kanara, the Roman Catholics of each parish have a flag, with a picture of their patron saint on it, which, on the patron's yearly feast, is hung on a pun tree about sixty yards in front of the church.92 The ancient Persians had a tiger skin banner.91

85 The freedom of its movements is perhaps the root cause why the flag is believed to be possessed or alive. Later their guardian influence is supposed to be due to their colouring and to the pictures of guardians draws upon them. Each of the old secret societies of England, the Foresters and other brotherhoods, had its emblem and its flag with the emblem emblazoned on it. In England the war flag is known as "the colours," and "the colours" are still consecrated when new, and their torn remains preserved in some great place of worship. The camp religion of the Romans, says Tertullian (A. D. 196), was all through a worship of the standards. Santh's Christian. Antiquities, p. 909.

Frequency to have held banners over feasters. Each tribe of the Jews had a banner. Frequency have a general standard with a yellow cross. Masons in a procession carry six funners of satin or silk fringed with blue, with, on each banner, one of the words Faith, Hope, Charity, Wisdom, Strength and Beauty. In the Royal Arch Chapter four officers carry bruners — white, scarlet, and blue. The Burmans have praying flags. Between A. D. 1960 and 1200, Japan was wasted by the wars of the red and white flags. In North-West Africa, every mosque has a banner; 100 and all Musalman pilgrims carry flags. In Morocco a white flar is hoisted on mosques at prayer time. At the coronation of the Russian Emperor, the banner of Russia Is first sprinkled with holy water and given to the Emperor, who waves it thrice. Froissart describes Douglas, who was slain at Otterburn, as buried at Melrose beneath the high altar, on his body a tomb of stone and his banner hanging over him. According to Anglo-Saxon accounts the Northmen had a wonderful standard borne before their army, from whose behaviour they inferred victory or defeat.

Flowers. — Their scent, colour and medical properties have earned for flowers a place among guardians, or spirit-scarers. When a Hindu visits the shrine of any local god or goldess, the ministrant gives him either ashes or flowers. These flowers are considered lucky. In the Konkan, flowers are used by Hindu exorcists to drive out spirits. The exorcist gives flowers and ashes to a man suffering from spirit-possession. If the patient keeps them for a certain number of days the haunting spirit departs. In Western India, many classes of Hindus tie chaplets of flowers round the brows of the bride and bridegroom. In the worship of the boy at the Chitpayan wedding, the boy has a chaplet of flowers, and grains of rice are thrown over him.7 In the Chitpavan pregnancy ceremony, a necklace of figs is hung round the woman's neck, she is covered with ornaments, and her hair is decked with flowers.8 The Poona Halâlkhôrs hang a garland round the bride's neck, and the bride and bridegroom throw flowers and rice on the house gods. Among them, on the third day after a death, the chief mourner lays a flower garland on the grave, and on the spot in the house where the dead breathed his last.9 The Lingayats hang flower garlands round the neck of the dead.10 Poons dyers, or Nîlârîs, sprinkle turmeric and flowers over the dead. Il Sweetmeats and flowers are laid on the spot where the Pardesi Rajpût of Poona is buried.12 On the third day after death, flowers dipped in scent are strewn on the Dekhan Musalman grave.13 In a Dekhan Musalman woman's first pregnancy, she and her husband are seated on a cot and wreathed with flowers, 14 In Kôlhapur, when a child is suffering from a disease, called bálagraha, or child-seizure, flowers are waved round the child's face.15 The Kunbis of the Bombay Karnatak have a festival, called pavatyáché púrnimá, or "the hank full-moon," when they throw round the neck of every one in the house, and round lamps and other articles, a hank of yellow thread. 16 In a Karnâtak Kunbi's wedding a flower garland is thrown by the bride over the bridegroom and another by the bridegroom over the bride.17 The Karnatak Madhava Brahmans throw flower garlands round the bridegroom's neck when he crosses the border of the girl's village,18 and in the fifth month of her pregnancy the Madhava woman is decked with buds.10 Among the Shenvis of Kânara, at the ceremony of betrothal, the boy's people cover the girl's head with flowers.20 In

Kânara, the office-bearers of the Catholic Church are installed by being crown to the flower chaplets and being sprinkled with holy water.21 The Kurubar, or shepherd with the Bîjâpur, always wears a flower in his ear.22 The Bijâpur Bêdars deck a woman's head wath flowers on her wedding day and after she dies.23 The Shôlapur Kômatis think a house where a birth has taken place to be impure. So they pay a Brahman to read fiend-scaring-verses, Kanada women to pour water in front of the house, and a flower-girl to hang flower garland. A The Beni-Isra'il bridegroom is covered from head to foot with flowers, and the Beni-Isra'ils cover their coffins with flower garlands.25 In Bengal, at the worship of Durga, the Brahman stocks a flower on the goat's head before he hands it to the slaughterer. In South India, flowers that have been offered to an idol are eagerly sought for by men and women. The men wear them in their turbans, and the women in their hair.27 At the new year purification ceremony in South India, garlands of green leaves and flowers are hung round the cattle's necks.23 In Malabar, when the Hindus build a temple, they consecrate it, install an image, wave lamps round it, and hang it with garlands.2 According to the Hindu religious books, as soon as a Brâhman dies, the body must be washed, perfumed, and decked with flower-wreaths.30 In dedicating a Hindu temple 108 priests throw garlands on the god, 11 so in the Acts of the Apostles, when the priests of Jupiter came to worship Barnabas, they brought garlands. Castro, after his triumph at Diu (1647), entered Goa crowned with laurels and with a laurel bough in his hands.32 The Egyptians crowned their altars with flower garlands. They also laid flower garlands on the coffins of the dead.33 The victim white-horse in China is crowned with garlands.34 Chinese women, even the old, dress their hair with fine flowers.35 The Japanese put fresh flowers in summer, and green boughs in winter, over their graves. In Teneriffe, before the crowning of the king, the palace is strewn with flowers and palmleaves.37 In America, the graves of those who died in the Civil War are hung with flower garlands. At the Fontinalia, the Romans decked fountains with flowers in honour of the nymphs.38 Flowers are strewn in the coffin of a Russian girl.30 On Ascension Day, in Germany, girls twine garlands of white and red flowers, and hang them in the rooms and over the cattle in the stable.40 In Hesse, on Easter Monday, young girls go to a certain cavera, but no one will go unless she has flowers.41 Golden flowers are thrown when a great man passes through a city. So in 1883, in Florence, when the body of the late Raja of Kölhapur was taken through the streets, golden flowers were scattered; similarly in the procession before the coronation of Richard II. (1377) of England, he was met by girls who threw leaves of gold into his face and golden flowers on the ground.42 In Wales, in 1804, the bed on which the corpse was laid was always strewn with flowers, and flowers were dropped on the body after it was laid in the coffin.43 In his Historical and Statistical Account of the Isle of Man (1845, Vol. II. p. 136), Train says: - "When a person dies, the corpse is laid on what is called a straightening board. A trencher with salt in it and a lighted candle are placed on the breast. And the best, on which the straightening board bearing the corpse rests, is generally strewn with strong scented flowers."44 In Glamorganshire, when an unmarried person died, his or her way to the grave was strewn with sweet flowers and evergreens; and in Yorkshire, if a virgin died, one nearest to her in size and age and resemblance carried the garland before the

corpse in funeral procession. When the funeral was over the garland was hung in the church.45 In England, flowers used to be sprinkled on rivers on Holy Thursday.47 Wells at Buxton and Tissington in Derbyshire used to be dressed with garlands of flowers, and nosegays used to be flung into fountains.48

Fruits. - Fruits scare spirits, because friendly ancestors are believed to live in fruit So in the pregnancy ceremony, among higher class Hindus in Western India, a girl's lap is filled with rice and such fruits, as dates, plantains, betelnuts and cocoanuts 49 Among higher class Hindus, the ceremony of lap-filling is also performed at a girl's marriage and coming of age, and when she gives birth to a child. The Bombay Prabhus. at their marriage and thread-girding ceremonies, fasten a pair of cocoanuts and an umbrella to a pole in front of their house. The origin of the distribution of betelnuts and leaves and coccanuts among guests after a Hindu marriage is probably to scare spirits. Among high class Hindus in Bombay, with the admitted object of scaring spirits, when the bridegroom starts from the bride's house, a cocoanut, and sometimes a knife, is placed in his hand. The Bombay Prabhus and Panchakalsis tie a betelnut and a piece of turmeric root to the wrists of the bride and bridegroom.50 The Korvis of Belgaum tie a cocoanut to the bridegroom's right wrist.51 That the original object of fruit or food offerings was to scare, and not to please, spirits, is seen in the drill plough-worship of the Bijapur Raddis. Among them in June. at the beginning of the sowing season, a cocoanut is broken and thrown on each side, that the place spirits may leave and make room for Lakshmî, who is represented by the plough.52 Among the Jirê Gôvandîs, or Marâthâ masons of Shôlapur, at a wedding, the boy's brother stands behind him holding a lemon spiked on the point of a dagger.53 Gujarât Vânîs tie a cocoanut and a piece of sandalwood to the bier.54 The Gond bride receives some pieces of cocoa kernel from the bridegroom's father the day before the wedding.55 In England, oranges used to be hung over wine to keep it from getting foisty, and oranges stuck with cloves were given as a New Year's gift. 56 On All-hallow Eve it was customary to dive for apples, or to bite at an apple stuck at one end of a circling pole at the other end of which a lighted candle was fixed.57

Food. - Hunger⁵⁸ is a spirit; food removes hunger, therefore food scares spirits. In the Kônkan, when a person is smitten by the Evil Eye, cooked rice is spread on a plantain leaf, curds and red powder are sprinkled over the rice, a flour-lamp is set on the powder, and the whole is waved round the possessed and taken to a place where three roads meet.59 So in Dharwar, if a child will not eat, the mother takes three pinches of food, waves them round the child, and throws them on the floor to a dog or a cat. The evil influence is caught in the waved food, and passes from the child to the dog by whom the food is eaten.60 On the September-October full-moon days the Bijapur Raddis take cooked food to the fields, and lay some in the middle, and some in each corner.61 Among Bijapur Shimpis, when the boy and girl reach the bridegroom's house, each puts five morsels of food into the other's mouth.62 Among Gujarat Brahmans, when the bridegroom comes to the girl's booth, her mother waves round him a lamp and two balls of rice and turmeric. 83 In Madras the Lingayats call dining, Siva-pújá or Siva worship.64 The Ooras of Mexico spike meat upon sticks and set the sticks

round the field, to keep the dead from coming after the cattle he formerly awned. In Germany, till late times, people used to set apart some of each meal to feel house sports and dwarfs. On New Year's day in Scotland, children went round and asked for bread and cheese. When starting on a journey unlucky omens are turned aside by going home, tating and drinking, and starting afresh. In North England, if you meet a flat-soled man on a Monday, you must go home and eat and drink, or you will come to mischief. Ague is cured in England by breaking a saltish cake and giving it to a dog to eat. A North England cure for a wart is to rub the wart with raw meet.

Foam. — Spirits fear foam and sweat. In the East Dekhan, spirits will not come near a horse from fear of its foam. So the Scythian sweated after a funeral to drive off evil spirit. The Romans believed that the foam of a horse cured ear-ache, galls caused by over-riding, itch, and many women's diseases. The people of Cyprus cured diseases by applying sweat. Sir Walter Scott mentions a friend curing his hand by putting it in the mouth of an Irish horse. The people of Cyprus cured diseases by applying sweat. The people of Cyprus cured diseases by applying sweat.

Garlic. - Among lower class Konkan Hindus the belief is strong that garlic scares fiends. Garlie and pepper rubbed into the eyes, and quashed up the meetrils, of these who faint, restore them to their senses, by, it is supposed, driving away an oppressing spirit. In the Kônkan, when a person is possessed, especially by a muniful or unmarried Brahman boy, the exorcist quashes pieces of garlic into his ears, or squeezes garlic juice into his nostrile, and the munia flees.75 Garlic is in Sanskrit called mlecchhakanda, the foreigner's root. Its peculiar smell, besides scaring spirits, cures cold, cough, wind, worms and swellings. It is a great taste-restorer to the sick. In the case of a dislocation, garlic should be pounded, heated and tied to the injured joint. It will remove the swelling and draw out the inflammation. Garlic is a favourite cure for acute pain in the side.76 Vinegar, rue, and garlic scare the Parsi devil.77 In Greece, garlic was believed to keep off the Evil Eye, and so was tied up in newly built houses, and was hung over the sterns of Greek ships. To repeat exception, the Greek name for garlic, was of itself enough to scare the Evil Eye.78 When it thunders eggs are spoilt. To prevent this Pliny proposes to lay an iron nail in the nest, along with laurel leaves, garlic roots, and other strong smelling plants." To keep off local spirits the Swedish bridegroom sews in his clothes strong smelling herbs such as garlic, cloves, and rosemary.80 A German witch will not eat garlic. Therefore, at Shrovetide many people smear themselves with garlic on the breast, soles, and arm-pits, as a safeguard against witches. 91 Before Baptism Danish children are apt to be carried off by the fairies: so Danish mothers guard their children by fastening over their cradles garlic, salt, bread and steel. The eating of garlic was an early English cure for a fiend-struck patient.83

Glass. — Spirits fear glass, perhaps as they fear the diamond, the ruby, the sapphire, and crystal, because they flash in the dark. Glass is found in Egyptian tombs, with Buildhist relies, and near Roman urns, apparently in all cases to keep off evil spirits. Strings of glass beads are the favourite ornaments of the wilder Indian tribes. The mirror was a sacred symbol, perhaps from the reflections, i.e., the spirits, which swarm in it. The early use of a burning glass to kindle fire would strengthen the belief in the sacredness of glass and its power over spirits. The spirit-scaring power of glass is perhaps the reason why a Hindu married woman wears glass bangles and glass necklaces. The object seems to be to seare spirits from her

The second secon

husband. So at news of a husband's death the widow's glass bangles are broken. The bangles not only are no longer of use but are harmful, since their spirit-scaring power will interfere with the chief use of a widow, namely, to be a house always ready to receive the dead husband's spark. The lucky thread tied round the neck of a Dhârwâr Mâdhava Brâhman girl is always mule of glass beads. 44 Among Bliannr Brahmans, on the fifth day after child-birth, the midwife lays on a stool a lemon-tipped darger and some glass bangles.85 According to Hindu religious issoks, a mirror should be touched by the chief mourner, when he is purified. 86 At Chinese doors round looking-glasses with carved frames are placed to keep off evil spirits.87 The Barman white witches use a looking-glass in restoring the soul of a child, in case the dead mother takes it away.99 In Japan, the mirror is a great object of worship.89 In Dahomey. at the end of a big festival, glasses are broken.90 A similar custom is still not unknown in Europe. 91 In a Russian house of mourning all mirrors are covered with sheets. 92 The glass called adder gem was considered a great charm by the Druids.23 In England, it is unlucky to break a looking-glass.94 Mirrors were formerly used by magicians as part of their ceremonial, and there was an ancient divination by the looking-glass.95 In England, it is unlucky to see one's face in a glass at night.96 The Hindus have a similar belief.97

Grass. — The Hindus believe that spirits fear the sacred grass called darbha.³⁴ According to Pandit Narsinha's Nighanturaja, p. 85, white darbha grass is a cure for fever, hard breathing and bile. The sacredness and spirit-scaring power of the grass are apparently due to these medical properties. Besides darbha, two other grassee, durvate and munij,100 are held sacred by the Hindus. The Durva grass is known in Sanskrit by twenty-one names, of which one is mahau. shadhi, the great all-heal, another, satagranthi, the hundred-knotted, and a third, bhûtahantri. spirit-slayer. Durva grass is a specific for fainting, lever, dysentery and nausea.2 Muni grass is sovran for cough and bile complaints. It is considered pure enough for diksha or initiation. for ariharaksha or house-protection, and for destroying evil spirits.3 Darbha, Poa cynosuroides, is invoked in the Atharva Véda to destroy enemies.4 In Western India, the dying Hindu is hid on darbha grass, and in all Hindu funeral rites darbha grass is required. performing funeral rites, the chief mourner wears darbka grass rings, and sits on darbka grass 5 Among Pattanê Prabhus, the juice of durva grass is dropped into the left nostril of a girl. when coming of age and pregnancy rites are performed. The Vadar chief mourner in Bijapur sprinkles molasses, water and green grass on the corpse-bearers'shoulders.7 Among the Bîjâpur Nadigs, after the burial, men bathe and return home carrying five stones and some blades of durva grass.8 In thread-girding the Karnatak Brahmans put a girdle of darbha grass thrice round the boy. When a Dekhan Kanôj Brâhman girl comes of age, on the sixth day the husband pounds darbha grass and drops some of the juice into her nostril. 10 Among the Dekhan Dhruya Prabhus, before the thread ceremony a razor is taken and sprinkled with water, and with it a blade of the sacred grass is cut over the boy's right ear, a second behind his head, and a third on his left side.11 A bundle of hay is tied to the lucky post in the Shôlapur Mudlia's wedding booth.12

Suppliants put grass in their mouths, apparently to scare anger from the mind of the person they address. So, about 1760, when the Kôlîs took the fort of Trimbal, the Musalmin garris in are described as going about with grass in their mouths.13 Shôlapur Maigs, on their return from a funeral, bring harialit grass and nim leaves, and strew them on the floor of the house where the body was laid.15 In Bengal, the Brahman bride during part of the marriage ceremony sits on a mat of viranale grass, covered with silk.17 In Bengal, at the beginning of the marriage ceremony, the first part of which is the solemn reception of the bridegroom by the father-inlaw, the father presents the bridegroom with a cushion of darbka grass on which the bridegroom stands.18 Hindus use darbha grass to purify their sacrificial vessels.18 In the thread-grading-Karnatak Brahmans wind a girdle of darbha grass thrice round the boy.20 Hindus scatter durbha grass over a place which has been smeared with cow-dung.21 In South India, the sight of darbha grass is believed to drive off the giants, demons and other bad spirits, who hurt man and spoil Brâhman ceremonies. The charm called pavitral, purifier, consists of three, five, or seven blades of darbha grass worn in the form of a ring. Before beginning any ceremony the priest takes the grass ring, dips it in holy water, and draws it on his middle right finger. This holy grass enters into all ceremonies, all sacrifices, and all religious and social rites.23 On the 11th of Âśadh (June-July) in Southern India no rice is eaten. People take a bundle of darbha grass, go to a temple of Vishnu, make a bed of the grass, and pass the night in the temple.23 In India, images of grass are made at places of pilgrimage,24 and formerly a blade of grass in a man's hair was a sign that he was for sale.24 The Brahman's sacred waist-thread, at the time of thread-girding, is made from the munited grass.27,28 Hindu recluses sit on darbha grass.29 The Beni-Isra'ils, on leaving a grave, pick three handfuls of grass and throw them back over their heads, apparently to prevent the spirit of the dead following them to his house.30 Similarly, the ancient Jews, as they returned from the grave, plucked grass and threw it behind them two or three times, saying :- "They shall flourish ontside of the city like grass upon the earth.'31 In Egypt kuphos grass was burnt to drive off malaria.32 In 1583, the Chinese wore straw hats as a sign of mourning.33 In Japan, a straw rope is tied round the temple of the sun-goddess to keep off evil spirts.34 The women of the South Sea Islands and the Motu women of New Guinea wear grass girdles.35 The Motu men and women of New Guinea wear plaited strips of bark or grass about two inches broad, as an armlet, round the upper arm. These armlets are often smeared with red clay.36 The Negrillos of the Philippine Islands (1695) wear no ornaments, except bracelets of rushes.37 At a holy spot in Dahomey travellers are given a blade of grass to throw towards the object of worship.38 The woman who led a band of Kafirs in the South African war of 1878 had wisps of straw in her ears, a charm which made her wound-proof.39 Some Papuans plait rushes into their hair round the crown.40 The only ornament of Wafip, an East African chief was a few strings of grass worn round his legs.41 Well-to-do Nubian women wear glass bracelets; those who are poor wear bracelets of grass.42 The Monbatus of Central Africa twist ornaments for themselves out of reeds and

grass, and wear them, like rings, round their arms and legs.43 The Balucka women of Central Africa pierce both their cars and lips, and insert inch-long bits of grass stalk.44 Bongo women put straw into holes made through their lips and nostrils.45 In some American tribes a traveller, to drive out the spirit of weariness, rubs his legs with grass, spits on the grass, and lays it on a shrine at a crossing of ways.46 In the Greek festival to the sun, grass was consecrated and carried about.47 The Romans had a custom of laying a sacred sieve in the road, and using for medical purposes the stalks of grass that grew through the holes.48 In Middle Age Scotland, oaths were taken on grass. Compare Scott's Border Minstrelsu, p. 362:-

> "So swore she by the grass so green. So swore she by the corn."

In England, a straw drawn through a child's mouth close to a running stream cures the thrush.49 In England, herbs used to be strewn in churches on humiliation and thanksgiving days. 50 That spirits fear grass may have been one of the reasons for the old English custom of strewing the floors of houses with rushes. Rushes were used in Devonshire as a charm for the thrush, as well as for their coolness, and their pleasant myrtle-like smell when broken. In the north of England rushes are still (1857) used in making rush lights.51

Grain. - Spirits fear grain, probably because grain scares the spirit of hunger, is a valuable poultice, and yields liquor. According to the Hindus, grain scares spirits. because certain guardian spirits or gods live in grain. Five deities live in rice: - Brahmâ the Creator, Sôma the moon, Ravi the sun, the Marutganas or wind gods, and Lakshmî, the goddess of wealth. 52 In all leading Hindu ceremonies, in Western India, grains of sarshapa, Sinapis dichotoma, and parched rice are scattered to scare fiends. 53 In Thana, among the Maratha Brahmans, when a daughter-in-law returns home from a distance, an elderly woman comes forward to greet her, and waves round her face water and rice, and throws the water and rice into the street, telling the lady not to look back.54 The admitted object of this waving is to drive away any roadside or other spirit that may have attached itself to the travellers. In the East Dekhan, the exorcist piles small heaps of millet round the possessed person, and, when driving out the spirit, holds grains of millet in his right hand and keeps throwing grains in the patient's face. Rice is poured over the stool on which the Dekhan Chitpâvan boy sits, when he is being girt with the sacred thread.55 The Chitpavan bride and bridegroom stand on rice heaps, and, before her wedding, the Chitpavan bride sits in front of a picture of the gods and throws rice over it.56 When an Uchla woman dies in child-bed, as the body leaves the house a nail is driven into the threshold to keep her spirit from coming back, and on the road to the burning ground rálá grains are strewn. 57 At their marriage, the Poona Uchla bride and bridegroom sit on a blanket in a square of rice.58 The Velâlîs, a Poona Tamil class of Vaisyas, strew the ground with parched grain before the body, when it is carried to the burial-ground.59 In the Dekhan, when one Brahman asks another to dine at his house, the host lays a few grains of rice in the guest's right hand, and at their memorial or sraddh ceremony the performer throws grains of rice and sesamum to all the Four Quarters to keep off evil spirits. 60 At the end of a Poona Dhruva Prabhu's wedding, when it is time to bow out the wedding gods, rice is thrown over them. 61 In Poona, on Dasahra day (Sept.-Oct.), men of the higher classes wear in their turbans some seedlings of the rice, barley, wheat, and pulse, which have been grown in baskets in the temple of Bhavani during the nine previous days. At a Dekhau Kunbi's wedding, in the girl's

village, a ball of rice is waved round the boy's head and thrown avery and the books moment grains of rice are thrown on the couple. In Poone, at Handalow was the couple. bride and bridegroom throw rice over the sacrificial fire and the water fars. A Amount the Dekhan Kanôj Brâhmans a heap of earth sown with corn is the welding the state of th At their weddings, the Dekhan Lodhis raise a pile of rice at the deer of the bay is home, count he kicks down.65 Among the Télang Nhâvîs of Bijapur the chief marriage to be that the price should throw rice over the boy and girl.66 On Cobra Day, Nagranchure, and the Proposal value draw a picture of a cobra in grains of rice, and on the cobra throw pulse, pare her grain, and places of plantains and cocoanuts.67 The Dekhan Prabhu during his morning visit to his power at the grains of rice over her, pours water over her feet, and goes round her. (4) At the Delice, which Brahman wedding, a measure of rice is set on the threshold of the boy's house, and the orrange she enters spills it.69 The Dekhan Govardhan Brahmans throw grains of Indian mathet over the head of the boy at the thread-girding. To At Nasik, when cholers breaks out the habbur Brâhmans collect in little doles from each house a small allowance of rice, but the rice in a cert, take it beyond the limits of the town, and there throw it away. This rice is a scape into which has entered the evil influence of the cholers. Ahmadnagar Brahman women in the afternoon go to a temple, or a place where sacred books are read, sit for a while, dray rice before the god or the reader, and in the rice trace the shape of a lotus. Among the Ahmoutingar Mhars millet grains are thrown over the bride and bridegroom, and the bridegroom's mather waves burnt bread round them, and pours water at their feet.73 In Köling ar, if a man eats bread made of the seven grains - barley, wheat, sesumum, ratio, wing the seven and chinak, no spirit can harm him.75 The Rapputs of Kathiawar distribute havel wheat on the day of naming.76 In the Karnitak, the bride and bridegroom take rice out of two baskets and throw it over each other's head.77 The Shënvis of Kanara fasten festions of rice carand mango leaves to their house lintel.78 The North Kanara Lingayats shower millet on the bride and bridegroom. 79 In Belgaum, when the Mudaliar's corpse is laid on the pile, the mourners drop rice into the mouth.80 Among Belgaum Vaddars, at their weddings, friends and relations throw rice on the heads of the bride and bridegroom. During the festival of Dayamava in Dhârwâr no corn-mills may grind corn, apparently from the fear that, as Dayamava is more of a fiend than a guardian, the blessed influence of corn-grinding may annoy her, may even put her to flight.82 Among Bijapur Shimpis, after the bride and bridegroom have heen rubbed with turmeric paste, women throw rice on them, and wave lamps round them to guard them against unfriendly influences.83 Bijapur washermen throw grains of rice on the bridegroom to keep spirits from attacking him. 4 Among Shôlapur Jingars the priest mutters charms over the razor with which the boy is to be shaved, and drops red rice on it. 53 Among Shôlapur Golak Brahmans the boy at a thread-girding sits on rice. 96 Among the Shôlapur Tirguls the family priest for ten days after a birth throws red rice over the mother.87 Bice is used in emptying their divinity out of articles in which guardian power has been housed. So the Sholapur Jingars, when the wedding bracelets, or kanhans, are no longer wanted, untie them, lay them in a plate, bow to them, and dro, a pinch of rice over them, and their guardian power leaves them. The sense scems to be that the guardian influence in the bracelet is bowed out and leaves, and that the pinch . Op. cit. Vol. XVIII. p. 139.

of real to against to prevent any wandering influence making its abode in the empty West a married ver comes of age, Sholapur Kômatis throw rice over the girl and to I have been in the yearly village festival, in the Southern Maratha Country, every h soundman gets some grain and some flesh to bury in his field.90 Among the Karnatak Mesahara, grains of rice are thrown after the dead, and during the Muharram festival, to scare evil, wheat and rice are pounded, spread on the ground, and pinches of them laid in the corners of the house. In Jain temples the worshipper strews grains of rice in the form of the winder, or guard-ended cross, in front of the image. A millet poultice is a common medicing with the Khonds, 21. The Khonds marry in the place where rice is has 'e d. ?2 The Ordon's put rice in the corpse's mouth. ?3 They throw rice on the urn as they take it to the tomb, and sprinkle grain on the ground behind the bones to keep the spiret from coming back.44 Like Parsis, Oraons believe that they please the gods when they make merry. 21 At a Good marriage rice is several times poured on the ground, 26 The Make Gonds pour handfuls of rice on the ground when the corpse is lifted, and drop some grains on the body.97 Among the Bengal Kôiris, the bride and bridegroom walk seven times round pare of water vessels, spilling grain as they go.98 At a Beni-Isra'il wedding, women touch the boy's knees, shoulders, and head with rice." The winnowing fan, probably owing to its connection with grain, is holy. It is one of the gods of the Nilgiri Irulas.100 The Kois of Southern India fasten cords of rice-straw on trees or at the borders of fields, In Southern India, the chief rite in the new-year, pongol, or boiling, festival, is the boiling of rice? At the crowning of the chief of Kolastri (in Madras?) in 1778, the chief was seated on a throne under a canopy, screened from sight till the lucky moment came. The chief priest thrice dropped rice on the chief's crown. When the third sprinkling was over, a great shout was raised.3 Rice, coloured with saffron and vermilion and charmed, is used at prija, or worship. This coloured rice is the proper offering to make to any one asked to a wedding or thread-girding.4 Mourners in south India drop some grains of rice into the mouth of the corpse.5 In Ceylon, parched rice is scattered at special ceremonies connected with spirits.6 According to the Persian sacred books, fasting brings the spirit of hunger and thirst. So with the Parsis fasting is wrong, and as with the Hindu Vaishnavas, feasting is a religious duty.7 It is said in the Avesta: - "At seed-corn spirits hiss, at shoots they cough, at stalks they weep, from thick ears of corn they fly. He who grows much corn sears the mouths of spirits with red-hot iron."8 With the Parsi belief that the man who grows grain scares fiends may be compared the account given by a European writer (A. D. 1248) of a man who saw the Night Hunt coming, and rushed into a field because he was there safe. It is known, says the writer, that evil spirits cannot come into tields. Opinions differ as to the reason. Some say the Creator will not let them come, because grain is useful to men; others say the field guardians keep them off.9 In a Japanese legend the sun goddess throws rice to drive off darkness, that is, evil spirits.10 In Nubia, while crossing a certain valley each man throws grain on the ground as a spirit offering.11 In Greece, in the rites of Isis, baskets were carried filled with wheat or barley,12 and in modern Greece wheat is strewn over the dead.18 The Romans offered millet cakes at the Palilia (21st April), because, says Ovid,14 the rustic gods take pleasure in millet. A trace of the older spirit-

scaring belief seems to appear in Ovid's remark,15 that purched grain and salt partly. It a Cumbrian girl is jilted, the youths rub her with peas straw. B. At a Corolean well-day, from the balconies girls strew flowers and grains of wheat as the bride passes. I have old legends, Seth is said to have put three seeds in Adam's month.19 In Ireland, formerly when any one entered upon a public office, women in the streets and girls from the whatever sprinkled him and his attendants with wheat and salt." On St. Agnes' Eve. in Scotland. girls go into a field, and say: - "Agnes sweet and Agnes fair, hither, hither now repair." In England, it was believed that straw would stop a witch. She could not step over it.21 In England, beans were sacred to the dead. They were supposed to contain the souls of the dead.22 In England, wheat used to be strewn before the bride on her way to charch.24 Wheat ears are mentioned as worn with rosemary in wedding garlands in hingland in the sixteenth century.24 In North England, when the last sheaf is cut, a figure is raised on a pole crowned with wheat ears, and adorned with ribbons, and is carried home in triumpit. It is called the kern or corn baby. Each cottage has its kern baby made of out cake.35 That pears are ominous or magical is shewn by the North England saving: - "Set a peaped with mine pease over the lintel, who ever comes in first will be your husband."26

(To be continued.)

SPECIMENS OF MODERN BRAHMANICAL LEGENDS.

BY G. K. BETHAM.

No. I. - The Manjaunt-Purána.

This is a short history of the holy place of Manigunt, known as Venkatera-Mühüt myu. and taken from the Mahapurana called Sahyadri-Khanda.

Preliminary Notes.

Manjgunt is a small village situated in the west of the Taluka, or Revenue Sub-division, of Sirsi, in the Collectorate of North Kanara, Bombay Presidency. According to the latest enumeration it contains 35 houses, and boasts of a population of 362 souls (194 males and 168 females). It is clean and healthy and possesses good water, and it is beautifully situated near the brow of the Western Ghats. Though but a small village, it is a place of some local importance, on account of the large temple sacred to Sri-Venkataramana, which is located there.

The Maniguni temple enjoys a yearly income of Rs. 1,600 from Government, which is given in lieu of the lands once attached to the temple, but now resumed. This income is supplemented by the takings of the jatra, or religious fair, which is held here annually. The yearly expenditure is estimated at about Rs. 800; the outgoings being laid out on the expenses of the fair, the pay of the temple attendants - about 20 -, and the expenditure on the daily worship of the idol.

The fair is held in the month of Chaitra, the great day being the day of the full moon in that month. It commences six days before the day of the full moon, i.e., on the tenth of Chaitra, and on that day the image of Sri-Venkataramana is placed on the lower tier of the smaller of his two cars, dragged down to a tank and then brought back again. The god is thus taken every day for five days in the flower (or small) car, each day a fresh tier, or story.

being added, tell on the sixth day — the great day, the day of the full moon — the idol is placed on the great car and dragged down to the tank. Before the great car is started, commuts in large numbers are broken on the wheels by the principal personages present, the cost of these coconnuts being defrayed from the temple funds. It is then dragged down to the tank, drams and other instruments being played before it, and camphor burnt in front of it. It is next dragged back and the idol reinstated in its place in the temple. The next day a quantity of red color is prepared in a large vessel, which is kept for the purpose in front of the temple, and a great deal of horse-play ensues, the liquid being thrown over each other by the assembled people. With this the játrá, or religious fair proper, closes.

About 2,500 is the average annual attendance at the fair, which lasts for about a fortnight. The people do not come from any great distance—sixty to seventy miles at the outside. Many come from below the Ghâts, the bulk of the pilgrims being goldsmiths and Havig Brâhmans. From the sixth day before the full moon, that is, the day of the commencement of the jûtrê, during the time that the car is being dragged, all the Brâhmans present are fed at the temple expense: and on the great day—the day of the full moon—a regular feast consisting of sweetmeats, etc., is given, and on this day the attendance of Brâhmans is usually very large. Many people merely goto the fair to amuse themselves, but there is also a moderate attendance of bonê fide pilgrims, who come with offerings of jewellery, money, etc. These offerings are usually intended to propitiate the god and gain his good offices in prospering their business or in securing the recovery of relations and friends from severe illness: they are also sometimes thank-offerings. Nearly all who come offer something at the shrine, however trivial it may be: small pieces of money, or truit, such as plantains, eccoanuts, etc.

There are two tanks at Manigum: a large one in front of the temple and a smaller one on one side of it. The tank to the side is called the Kôthi¹ Tank, and it is supposed to be particularly holy. Any one bathing in it is considered to have done as meritorious an action as if he had bathed a karôr of times in sacred aprings. There is, however, but little water in it now, and so not much use of it is made by the pilgrims. There is plenty of water in the great tank, which has some twenty or twenty-five steps in it, by which people may descend or ascend. Near the great tank is a temple sacred to Hanuman and containing an image of that god.

A certain amount of trading goes on during the fair. Little business is done during the days that the car is being dragged, but afterwards, that is, from the day of the full moon, trading commences in earnest, and it usually lasts on till the day of the next new moon. The principal articles offered for sale are brass and copper vessels, cloth, cocoanuts, sweetmeats, spices, and sugar.

The Maniguni-Purana.

Sûta conversing with Vyâsa said: — "O! all-knowing and deeply learned Vyâsa, you have told me many notable stories. You have told me even about the origin of the Sahyâdri Mountains, but I am most anxious to hear what you have not yet told me of, and that is the story of holy Venkatêsa, which is contained in the sacred history of god Vishnu. Be good enough therefore to relate it to me."

Vyasa, in reply, said: — "Listen to me, O Sata! He who hears the story of the most holy actions of the glorious Vishau, as well as he who relates them to others will be successful and happy. Sri-Vishau, after he had been kicked by Bhrigu Rishi, left Vaikuntha and came down to Venkatadri, where, on account of its resemblance to Vaikuntha, he settled. The place abounded with tanks of pure water and various trees, plants, creepers, and flowers, such as the Asaka, the Punnaga, etc. The demons, who resided in the place, being terrified by the presence

I Rijat, a granary, store-house: also a common form for a square in a neith-agar, i. e., for a salt-pan. The term holist applies to either the Koneri or the Dhenn Tirtha. I incline however to identify it with the Dhenn-Tirtha. A large tank might be the Koneri-Tirtha of the Persina, as it is square in shape and has steps on all four sides of it.

of Vishnu, fled from the spot, and assuming the forms of wild beasts they entered Bhutaka, where they began to trouble the Rishis. The Rishis thereupon went in search of Vishnu, who having assumed the name of Venkatesa, had concealed himself on the hill or mountain of Venkatachala and begged of him to relieve them from the troubles occasioned by the quendam demons (now wild beasts). Srî-Venkatêsa, in reply, told them that he had come down from Vaiknutha to win Padmavati for his wife, and also to protect his devotees. He further told them to be in readiness to assist him in his matrimonial designs, and in return, should they prove useful to him, he promised to remove the cause of all their griefs and anxieties. Accordingly, Srt-Venkateia, after he had won Lakshmi, started from the Scshachala Mountain with her, attended by Vishvaksêna and other followers, and made a circuit in order to protect his worshippers, and to relieve them of their cares. He pursued and killed all the wild heasts he met with, and in doing this he travelled a considerable distance. He traversed the countries of Chôla and Pândya, and bathed in the river Kâvêrî. He crossed many rivers, among others the Nêtravati, so called because it took its rise from the eyes of Varahasvamin, when he was living in the Sahyadris, and the Kumaradhara,2 both the Tunga and the Bhadra, which begin from Varihasvamin's iaws, and the Sôma3 and the Aghnasint,4 and thus seeking for a suitable shady and well-watered resting place, he eventually settled down near to a beautiful tank called Katka, which is situated to the west of the river Aghanasini."

Sûta then asked Vyâsa to tell him about the origin of the tank, and how it came by its name, whereupon Vyâsa replied:—

"Hear, then, O Sûta, the (history of the) origin of the blessed tank.

Once upon a time a Rishi called Kanka, (a person) of profound learning and great piety, in the course of his travels, during which he had bathed in many sacred streams and exercised great charity, came at length to the Rishi-Parvata, on a mountain in the Sahyadri Range. Here he found many Rishis living, namely, Bharadvaja, Kausika, Jabuli, Kasyapa and others, with several demi-gods, Gandharvas, Apsaras, Kumaras, and Siddhas. He, therefore, resolved to remain in the place for a long time. On one occasion, when he went into the surrounding forest to gather fruits and roots, he saw the birds and beasts gasping in the great heat of the san, and suffering much from the want of water, which was not obtainable in the forest. Being filled with compassion for these helpless creatures, he created a tank, from which they could get water to drink, and which would likewise be generally useful. He used also to bathe every day in the tank himself, and commenced practising very severe austerities. Sri-Bhagavat, the husband of Kamala, was much pleased with the piety and devotion of the Rishi, and in consequence, after the lapse of some time, he appeared to him and promised to give him whatever he might desire. The holy man then asked that it might be ordained, that from that day he himself, as well as all others who should bathe in the tank, might receive absolution from all sins and thus obtain salvation. He also asked that the tank might be called after him. Sri-Bhagavat, being pleased at the request, promised to grant it, with the addition that great worldly happiness should likewise be the pertion of all believers bathing in the tank, and then, having said this, he disappeared. Since that time the tank has been known by the name of Kanka-hrada (or the tank of Kanka)."

After hearing the above, Sûta asked Vyasa to tell him, whether there was any instance of any one having been freed from sin and its consequences, by bathing in the blessed tank, to which Vyasa replied:—"Hear from me, O Sûta, this ancient and mysterious history. Once upon a time Marada, on the occasion of a visit to the hely city of Kill, saw a beautiful woman performing her devotions. He asked her who she was, and why she was thus doing persons: whereon Ganga gave answer thus:—"O Narada, all persons leave their sins is me, and go whereon Ganga gave answer thus:—"O Narada, all persons leave their sins is me, and go

² A river rising from the eyes of Vaciliasvins; Mt., the takes away of virginity [Kansalassas F].

² The name of a small siream near Gillarga.
⁴ The Aghankimi or Tidri river, rises near Sirai in Heath Kamers, and falls into the Arabian Size: known locally under the name of Dominalia also.

away five. I am thus doing penance in order to get rid of these sins, which are a great burthen to me, and to gain salvation. I am indeed fortunate to meet with you now thus. Advise me as to what I should do.'" Narada then said:—'O woman, Srî-Venkaţêśa has come down (from Vaiknntha) to relieve all people of their sins, and he has taken up his abode near the waters of the Kanka-hrada in the Sahyâdris, and has promised to bestow complete absolution and salvation on those who bathe in those waters. If you join the river Svêdinîs your wishes will be gratified.' Accordingly, the (river) Ganges, which had assumed the form of a woman, took its course through the rocks, and joined itself to the Svêdinî, the warm water of which is said to be the sweat of Srî Venkaţêśa. Having done this it passed on under the name of the Sîtala-Ganga to Venkaţêśa, and so on to the Kanka-hrada. There being purified, it (or she) once more returned to Vârâṇaśa, being, however, directed by Venkaţêśa to repair thither (i. e., to the Kanka-hrada), on one Sunday in the month of Mâgha every year."

Vyûsa then said further:—"Brahmâ and Mahêsa assumed the forms of a cow and calf respectively and came to Srî-Venkatêsa (at the Kanka-hrada), but were unable to ascend the stone on which he was recliuing. Srî-Vênkatêsa, taking pity on them, caused the stone to become soft. After this the cow and the calf used to ascend the stone and bathe the image of Venkatêsa every morning and evening in milk. A Brâhman, observing this, used to feed them regularly every day, in return for which devotion they bestowed much wealth upon him, they themselves meanwhile wandering about in the jungles."

After hearing this, Sûta asked Vyâsa to tell him (the story of) the origin of the Sôma and Aghanâsinî Rivers.

Vyâsa then said:—"Dakshaprajâpati gave his thirty-three daughters in marriage to Chandra. Of these Chandra loved only Rôhiṇt, and neglected the others, wherefore in their wrath they cursed him. To avert the evil of the curse, Chandra, by the advice of his guru, made a lièja, to which he gave his own name, and began to do penance. While thus engaged in worship, Paramêśvara suddenly appeared from the lièga, and striking the earth with the tribila he held in his hand, he caused water to rise out of the earth, wherewith he freed Chandra from the consequences of the curse. This holy water, rising as it does in the Sahyâdris, flows south for a distance of twenty-four miles, and then turning backwards it joins the Chandikâ,6 whence receiving the names of the Somâghanâśinî7 and Kâmâghanâśinî8 Rivers, it passes to the south of Gôkarna and falls into the Western Sea."

Sûta then asked Vyâsa what further deeds were done by Sri-Venkatêsa, while resident in the Kanka-hrada.

Vyasa replied:—"While Śri-Venkajēśa was thus reclining on the stone, a yōgin called Tirumala, a follower of Vishņu, after travelling all over the world and visiting many sacred places, came at length to this very spot, which from its shade and the presence of the Kankahrada, appeared to be very charming. After bathing in the tank and performing his usual daily ceremonies, he drank some water, and then seating himself under a tree he commenced meditating deeply (upon Vishnu). Presently he heard a voice from the skies saying:—'O Tirumala Yôgin, Sri-Venkatéśa and his attendant deities are on the stone that is in Kanka-hrada here. Take him from this place and convey him to Maniguni, which lies in a northerly direction from here. Arrived there establish me (sic) near the hutta, which is at the foot of an Aśoka tree, situated to the west of the Somaghaniśini. To the north-east of the hutta lies the Kônêri to Tirtha, and in this tirthe a good deal of treasure has been buried by one Vasu

to A square pond or tank with steps on all four sides (Kanarese).

(by name). From this store (of treasure) take as much as you need for erecting the south and finish the work as soon as possible.' On hearing these commands issued from the store. Tirumala Yôgin swooned with delight, and while thus lying in a trance, he beheld as in a dream Sri-Venkatêsa, resplendent in appearance with his bow and arrows, discus, apear and his other weapons in his hands, and adorned as to his person with all sorts of lewellery and ornaments. who thus addressed him: - 'I am much pleased with your devotion. Since I left Verkatiditi I have travelled far and wide and seen many countries, and now I wish to take up my residences for the future in the Sahyadri, or, as it is sometimes called, the Paschimadri. Continue to worship me devoutly and I will bestow salvation on you. I will also assume your name and dwell there with my attendant deities. Manigual is a sacred place, and is blessed by the presence of five torthas, called respectively the Chakra Tirtha, the Dienu Tirtha, 11 the Patanya 12 Tîrtha, the Indu Tîrtha,18 and the Papanâsinî Tîrtha 14 Take me then from this place, and carry me till you feel my weight sensibly increased, and when that comes to pass establish me in that place. Awake, therefore, from your dream.' So saying he chapped his hands and vanished. Tirumala Yôgin woke up, pleased and joyful, from his refreshing sleep and happy dream, and forthwith proceeded to remove the image of Venkatcia from the stone on which it was placed. While looking at it with great joy, he inadvertently let fall the chisel which he had in his hand on to the left side of Venkatesa, thereby causing a wound from which the blood flowed freely. When Tirumala Yogin perceived this he prostrated himself before the image and began to weep bitterly; when he again heard a voice from above, as on the previous occasion, saying :- 'Press the wound with thine hand and the bleeding will cease.' He accordingly did as he was told and the flow ceased; he then took the idol up in his hands to convey it to Maniguni as directed. On his doing this, the cow and the calf assaulted him violently, striking him with their heads but not goring him, which terrified the yilin very much, and he called upon Venkatesa to come to his aid, whereupon a voice again came from above proclaiming: - 'Know who this holy man is.' On hearing this the cow and the calf desisted from their attacks, and the cow bathed the idol in its milk, and the gods, casting aside their disguises, appeared in their true forms (i. c., as Brahma and Siva). The yigin then again took up the idol, and, as it was smirched with blood and milk, he washed it in the waters of the Kanka-hrada. This made the water impure and so Tirumala implored the sun to cleanse it, whereupon the sun, assuming the form of a swan, removed all the impurities and threw them on to the edge of the tank. After washing himself once more in the water thus purified, Tirumala, under the direction of Brahma, applied gopichandans of the earth from the edge of the tank, and then proceeded in a northerly direction.

"Brahma and Mahesa (that is, the cow and the call) then addressed Sri-Veukajesa as follows: - 'O god, we have devoted ourselves, soul and body, to your service until new: what reward will you bestow upon us in return ? Sri-Venkaria replied thus: - Those who in future shall worship your foot-prints on this rock, in the form of a cow and calf, shall obtain the reward which is the meed of those who observe genthemeliserate, h and those who worship the foot-prints of a cow and a calf together shall obtain the same reward as though they had given away a cow and a calf together in charity. Return now to your native place.

"Tirumala Yôgin then, still carrying the idol, advanced further and further into the forest, till at length feeling the weight (of the image) intolerable, he set it down on a whiteants' nest while he rested. After resting himself sufficiently, he essayed to lift the image once more, but was unable to do so; and while struggling with the weight, he once more heard a voice from above saying: - 'O Tirumala, this is the sacred and beautiful spot called Manigumi. Seat the image here.' Overcome with joy, Tiramala lifted the idel, which no longer resisted his efforts and placed it in the appointed spot near the Asoka tree, and having done this, he

worshipped it. While thus engaged, he heard voices reciting the Pédas and chanting Hara-Kirtunus, and the sound of drums of various descriptions being beaten, and he, therefore, bent his steps in that direction. On arriving at the place he espied Sômêsa, whereupon he hastily turned back again without performing any obeisance, or in any way acknowledging him. Paramesvara then said to his wife Parvati: - 'O Dêvî, this nogin is devoted to Vishnu, and spends his life in his service and in performing his works. All the gods are willing to help him in this, and we also should go. To him all gods are alike.' Pârvatî replied : - 'Oh Mahêśa! you may go, if you like to help one who did not acknowledge our presence by even bowing down before us, and so saving she cursed all gods to be stones. Mahésvara, considering this unjust on the part of his wife Parvat! left her and went away to the North-East, with the intention of being kind to, and assisting the jūinis. devotees and others who are zealous in his service. There he assumed the form of Panchanana, and began practising severe austerities. His wife Parvati, in a dejected mood, went to a place which was half a yojana away to the South-East. Here she met the Rishi Narada, who was going to visit Śri-Venkateśa, who had now taken up his abode near the Sômaghanasini river, so as to be near Tirumala Yôgin, whom he loved. Acting on the advice she received from Nârada, Pârvatî bathed in the waters of the Kankahrada and of the Sômaghanisini, and then she worshipped her son Ganapati, so that she might succeed in her object."

Sûta then asked Vyâsa: — "What did Tirumala do at the foot of the Aśôka tree?" Vyâsa replied: — "When Tirumala returned from his hurried visit to Sômêśa, he found Śri-Venkațesa in the form of an idol, so he fell prostrate before the image in a swoon. Meanwhile Narada having sent Parvati off as described above, came to Tirumala. He saw him lying senseless, and the god Sri-Venkatêsa turned to stone. Being surprised at this, he played upon his vind, in order to propitiate Jayadesvara. Tirumala Yôgin thereupon recovered from his swoon, and begged of Narada to restore Sri-Veikatesa to his former condition. Nårada replied :- 'You have committed two sins: one is that you let your chisel fall on the sacred person of Sri-Venkatêśa, and the other is, that you did not make obeisance to Sômêśa. Go, therefore, to the North-East where Siva is performing austerities, and then go to the South-East of this place where Parvati is worshipping Ganapati, and pray to her devoutly. You will then be absolved from your sins, and Sri-Venkatësa will be as he was before. Build a temple and place (the image of) Srî-Venkatêśa in it. All the gods will be present at the installation, and so will I.' So saying Nårada departed. Tirumala Yôgin took out of the Kônêri-Tîrtha as much gold as he needed and erected the temple. He then, by the direction of Narayana, bathed in the Brahma-Tirtha, and bringing water from the Skanda-Tirtha he poured it over Nârâyana and Paramesvara, the latter having now assumed the form of Panchalinga, 16 and worshipped both gods. He then came to the Chakra-Tirtha and begged for help in his work from Maruti. After this he went to the South-East whither Parvati had gone, and after duly performing obeisance to her, he begged of her to be present at the installation ceremony of the idol. He then went to the Koneri-Tirtha, which, having been dug out by Narayana's chakra, contained in its waters the efficacy of all sacred waters, and performing all his daily ceremonies, such as enene, sandkyd, etc., and thus being made free from sin he came and presented himself before Sri-Venkatesa, who thereupon appeared before him in a living form. The yogin worshipped him, and then summoned many learned Brâhmans well versed in Vedic lore. Brahma and other deities were also invited, and then, in accordance with the forms and ceremonies prescribed in the Vishau Agama, he placed Sri-Venkatésa on the spot indicated by him, at the happy hour of noon on the fourteenth day after the full moon of

^{*} Paschalinga refers to the local legend of Gikarna: the five lingue are:

⁽I) Shejfévara in Shejvéd near Kárwár. (I) Mahibalésvara in Gökarpá.

⁽⁵⁾ Siddhésvara in Siddhéshvar near Gökarná.

⁽⁴⁾ Distributes in Distributors, five miles south of Kumis.

⁽b) Murdidyara in Murdishyar.

Phalguna. After the installation, Éri-Venkatésa was bathed by all present in panchamrita and with the juice of panchaphala in the manner laid down in the mantres, and then they dried him with a soft white towel, removing all moisture, and having done this they decorated him with sweet scented flowers and with suvaraskitaki." They put a crown on his head. and lace on his neck, and adorned him with keyere, le karacha, le and makera-kundala. 20 After worshipping him thus, naivedya was performed with all sorts of delicate dishes. sweet fruits and betel leaves: then followed mangalarati,21 with all sorts and kinds of drums, dancing. singing and mantras, and this was succeeded by the nemathers. After this Tirumala did obeisance to the Brahmans with sugarcane and flowers, and presented ornaments and clothes to all, satisfying all completely. He also fed them sumptuously, and then received their blessing. He passed that night in vigil (as enjoined by the idstras) and performed the usual daily ceremonies early in the morning. He then performed the rites of rathSteave and vasantôtsava, and the next day he performed avabhritha, thriha-mana and the yejands. While these sacred ceremonies were in progress Parvati rejoined Parameivara and became happy through the good offices of Sri-Venkatesa."

Vyasa then further said to Suta: - "Narada asked Éri-Venkațiea to use his influence to get all the gods to settle in his neighbourhood for the good of his devoices. whereupon Sri-Venkateia looked at Lakshmi with a smile. Then Mahishamardini, taking with her the Dhrava-lings, which was to the east of the Chandika, went to the north-west, where she settled. This place is called Dêvîmanî.24 A young prince, called Dhrava, brought the Dhrava-lings, (so called from that circumstance) from Gôkarna as far as Dêvîmani, and when feeling tired by the weight of the lings and by the heat of the sun he placed it there. Half a league from there is the Suvareakunda Tîrtha, near which lives Suvarnakësini, ** the daughter of a Rishi. Half a league from thence is the sacred place called Lakshmi-pads-dvaya." To the north-west of Manigum Somesvara resides, in order to protect good people by the command of Hari.

"Mahêśa had told his son Ganapati of the quarrel between Parvati and himself, and how she had cursed all gods to be stones, and he had therefore advised him to go elsewhere and seek a quiet and safe resting place in the village of Navanita, which was situated in the Paschimadri. Ganapeti was accordingly wandering with his wives Siddhi, and Buddhi,29 and was travelling with them, when he came to Manigum and found a crowd of gods and people assembled there. He also saw the relies with Bri Ventrates seated in it. Maruti told him that his father was there; whereupon, filled with fear, he and his wives fled eastward. Mâruti told Śri-Venkatāsa about this, and Parametvara also came to hear of it, whereupon, getting angry, he cursed Ganapati and his wives to be tarned into stones, and then in high dudgeon he retired to the north-west. Garagett and his wifes were accord-

ings, turned into stones before they had waiked a league and a half to the eastward of Mahiganh. Mahésa coming to the place shortly afterwards, and seeing the sad condition of Galaspati, prayed to Vishan, upon which Nárada went to Sri-Vehkatésa and besought him to be merciful. But Vehkatésa said to Nárada:—'No one can release a son from the curse of his father: therefore let him (i. e., Ganapati) settle at Drônipur, 30 and protect the faithful there. Let him grant the petitions made by devotees at that place. Let him become famous under the name of Suta-Vinayaka within the circle of my influence. Sahkara, under the form of l'alchahinga, will protect devotees near my residence. Ganapati will remain at Révanbhandpar, 11 and will take care of the faithful there: while my servant, the devoted Maruti, will protect the (outlying) villages. Let all the other gods, who have come here settle with their attendants, live round about this place, according to their pleasure.' Nárada was much pleased at hearing this, and from that time forward Srî-Vehkatêsa, under the name of Tirumalèsa, took up his abode in the sacred place of Maūjguni, surrounded by deities, attendants and the sacred springs."

Sûta then asked Vyâsa: — "What is the story of the Kônêri-Tîrtha? Why did Vasu bury treasure in it?"

Vyasa, in reply, said: — "In the Krita-yuga there lived in the town of Vaijayantipura³² a pious merchant, by name Padmadbara. He lived a happy and contented life, with his sons and grandsons, and, under the guidance of learned Brahmans, devoted himself to the service of Madhukèsa. He had one son, who wasted his father's money in sinful pleasures. The merchant pleaded with him but in vain, for the son paid no attention to his remonstrances, so he at last turned him ont of his house and even went to the length of having him turned out of the village. The son, thereupon, repented of his misdeeds, and wandering in the forest began to pray to Narlyana, fasting. After a little while the god presented himself before him, with his saikha, chakra, gadū, and palma in his hands, and requested Vasu (which was the name of the son) to ask of him whatever he might desire, and then taking up some water from the Kônêri. Tirtha, he sprinkled it over his head and made him pure. Again he asked him what he wanted. Vasu, on beholding Vishnu, worshipped him, and begged of him to grant him great wealth in this life and eternal happiness in the next. Vishnu granted his request: and then saying that the waters of the Kônêri, or Chakra, Tîrtha, which he created by means of his chakra, would remove the sins of all who bathed in it, he disappeared.

"Some time after the expulsion of Vasu from his home his father, the merchant, yielding to the entreaties of his wife Padmini, despatched a number of camels (under the charge of numerous servants) laden with much treasure for his son Vasu. A note was attached to the forehead of each camel, stating that the treasure was for Vasu. He ordered his servants to bring back the treasure should they be unable to find his son. The servants, in their quest, wandered over hill and dale, and through towns and villages, till at length being thirsty, they turned aside into a forest which lay to the west of them. Here they found water, but Indra was disporting himself therein with his wives. Nevertheless, they proceeded towards it. Indra seeing them, became enraged, and seizing some huge rocks he hurled them into the air. These falling to the ground, produced a dreadful noise, and caused dust and mist and water to rise and splash in large quantities. The servants, on beholding these terrifying phenomena, forsook the camels, and fled in every direction. The camels (left untended) went on wandering aimlessly in the forest, till at length they came to the spot where Vasu was residing. He saw the notes on their foreheads, and on reading their contents found that the treasure with which they were laden was meant for him, and he therefore took possession of it. He led a very pious life after this, and at the end, when death was approaching, he buried all his treasure in the Kônêri-

^{*} Lit., the village of the watering trough.

Tirtha, and after death he went to holy Vaikuntha. This is the improving story of Kindri, and how it came to be full of treasure. There are other springs also, called respectively Research. Shanmukha, Vinayaka, and Bilva,"

Sûta then said to Vyasa: - "Tell me what kinds of austerities were ar action by Thomas's Yôgin." Vyâsa replied : - "He satisfied the Brahmans, and gave them more money, see that the. might worship Venkatêsa according to the forms laid down in the mantras of Vistana How round ned Venkatêsa thrice a day, and at the ninth hour he prayed and how Adams before no stante; and on the twelfth, fifteenth and thirtieth day of every munth he presented special afternational took the god about in his car. He used also to worship the attendant deliver of Vision every day with the usual (or customary) offerings, and also with a resident for section of the offered delicate dishes of food as sacrifice, dishes such as integrated in single straight single straight and the sacrifice of the sacrification of the sacrifice of the sacrification of the sacrifice of the sacrifice of the sacrification of th masha-bhaksha,37 vatika,38 sali-tandula,33 atirasa,40 malha,41 (10 794-hisabel),42 aprilate Politice changuli,44 modaliz,45 and also plaintains, jack-fruit, etc. In the season of Vasanta-first against inc (naivēdya) was offered by means of panaka. In the month of Kirttika rows of lights were lighted in front of the idol (image). In the season of Hemanta-vita material was performed to mean a of huggi. 47 bhabri. 48 guda. 49 ghrita, patôla. 50 kakhâla. 51 rive wêbba. 2 ha dana guda 22 and with trains such as grapes, dates, jack-fruit, pomegranates, and also with other good rate fluits this of seeds (bijapura); also with pin-supuri. In this way he passed many years in the openancy of many saints, worshipping the god. At length, by the direction of Hari, he made a petermane to Giri, whereon the god revealing himself to him in his true (or original) from his section became merged in his. In a former life this yigin had been a Brahman called Middle via passe under the name of Tirumala) and, as a reward for the severe austerities he had are treed in Venkatadri, he obtained salvation."

Sûta then said to Vyâsa: - "Tell me when Veikatêsa proceeded from Girl, what he did. what object he had, where he stopped, and what form he assumed."

Vyasa replied: - "In order to destroy cruel beasts and to protect his worshippers. Venkatë: held a conch shell and a bow in his right hands and a chaken and acrows in his left hunds, and having wooden sandals (on his feet) he went to live at Manigant in the Sanyakri mountains. One day, when Narada came to Venkatagiri, he saw Palmivati performing austerities, because her husband had left her, and he addressed her thus: - 'Oh goddess' your husband is staying in the Sahyadris: go there and be happy.' On hearing this she went away, wandering on through villages and towns, deserts and forests, hills and dales, till she came at length to the Suvarnakunda. She bathed in that pool, and was performing her devotions, when saddenly a woman named Suvarnakësini made her appearance from the middle of the pool and told Padmävati her story, which was as follows: - Once upon a time when Indra came to the pool to disport himself with his wives, he caused a shower of gold to fall into it for her (Suvarnakêśinî's) sake, for the space of about six hours. She then gave Padmivati some butter, and saying that her wishes would be gratified she disappeared. Padmivati then walked for about six miles in a north-easterly direction, looking everywhere for Venkates in a despairing kind of way. While wandering thus she unexpectedly met Tirumala Yogin, who was perform-

Money.

M A dish of rice, milk and sugar. Broth, soup. 48 Ghi; clarified butter. or Cakes or cooked food: more especially cakes made of the best kind of midn, a split pen or pulse Phasesias radiatus or max). The very best kind of rice.

³⁸ Cakes made of pulse flour fried in oil or butter. 40 Sweet cakes made of rice and angar and fried in phi.

⁴² Cakes made of mudgit, a kind of bean. Also cooked mudgit, 43 Light and rich bread or cakes: opapa by itself signifies this; purils or plint means simply cakes, and is therefore more or less tautological. 15 Sweetmanta.

⁴⁴ Excellent — the best — molasses. [Compare the Encares chigaji.]

⁴⁶ Cooling drink: especially acidniated drink such as lamounds, tamarind water, etc. 47 Boiled rice mixed with any split pulse, sait, etc. 48 Leaves or cales of brend : the closeds form of backara. m A disk composed of rice, flour, pumpkin or ensumber, sugar, etc.

sa A pampkin gourd (Cuserbita Pspo). 49 Molasses, coarse sugar. m A variety of cucumber. 31 All-spice (Myrtus pimenta).

ing his round of one kin round Venkatesa. On seeing her he guessed from her face what the object was that she had in view, and he therefore said to her:—'Sri-Venkatesa is living only about two kin from here: join him and be worshipped in company with him by my devoted disciples.' She consented to do this gladly, and went and settled down on the right side of Sri-Venkatesa."

Vyasa then said to Sûta: - 'Now listen and I will tell you the story of the Bilva-Tirtha.

"A Brahman devoted to Bhairava was going to the Sahvadris with the intention of worshipping him on the day of the Mahasivayoga. While going (there) he lost his way in the forest, and being unable to find it. he betook himself to prayer without food, and without performing his usual devotions. Bhairava, therefore, determined to succour his devotee, and for this purpose he assumed the form of a bull, his wife taking that of a cow, and appeared before him like ordinary cattle, returning homewards with the herds. The Brahman, on seeing them, followed them with the fruits, etc., he had brought with him as offerings, determining to worship Bhairava after entering the town at least. Bhairava thereon immediately appeared to the Brahman in a very tall form, and commanded him to erect a temple to him as high as he was himself, and such as would command from it a view of Gökarna: in return for which he promised to bestow much wealth upon him. As Bhairava was disappearing after this, the bull as if to lower his pride struck his head with his horn, and the cow poured its milk upon him and then they both vanished: on perceiving this, the Brâhman worshipped the linga, and wreathed it with bel-flowers and leaves. Upon this being done, Bhairava again assumed a human shape and spoke thus:- 'O Brahman, a little distance away to the east of this place there is a Tirtha, throw the bel-leaves you have adorned me with into it, take a bath in it, and then go still further east when you will meet Sômêsvara. Worship him as well as myself with panchadravus devoutly. Srt-Venkaten will do what you desire: and saving this he disappeared. Accordingly he (the Brahman) searched for the spring, and when he found it he threw the bil-leaves and the fruit into it. In the last yuga, a Gandharva had forced a woman, named Ambala,55 for his sensual pleasure. She in her wrath cursed him to be a fish until he eat bél-leaves, which had been consecrated by being placed on the head of a Sivalinga. This Gandharva had in consequence wandered through many rivers and tanks in the guise of a fish, till at length he had come to this tank. When the leaves therefore fell into the tank, the fish eat them all, and thus, being freed from the curse it resumed its original (or rightful) form of a Gandharva. And then addressing the Brahman, he said:-'O pious and faithful Brahman I have regained my former state through the leaves which you have thrown into the water: so let this spring be known in future as the Bilya-tirtha. Those who bathe in it will be purged from all sin committed by them in their former births.' So saying the Gandharva returned to his native place. The Brahman was greatly surprised at hearing this, and from that time forth he used to bathe daily in that spring, and worship Bhairava and Venkatesa, till he finally obtained eternal happiness. I have told you this story as briefly as I could. It is from this story that the spring derives its name. He who hears it or reads it will become pure and attain to Svarga,"

Vyåsa said: — "Oh Såta! in the last yuga, Skanda and Vinâyaka, when boys, centended with each other, and they came to their father, Mahêśvara, and enquired of him thus: — 'Tell us, O father, which of us two is the wiser and braver?' Their father told them to go and ask Brahmâ. They therefore went to Brahma-lôka, and there they saw Brahmâ with Sarasvatî by his side. Brahmâ knowing their errand took up some water in his hands from his

^{*} The five elements of immeriality, i. c., (1) milk, (2) curds, (3) ght, (4) honey, (5) sugar, which make up the mixture paricklespits, in which an idel is bathed.

The name of the youngest daughter of a king of Kasi and wife of Vichitravirys. She became the mother of Pindu by Vylas, the brother of Vichitravirys;—the latter dying childless. There is a curious likeness here to the Jewish law enjoining the raising up of seed to a brother dying without issue. Ambali is also the name of one of the Apparent. It is probable that she is the individual indicated in the text.

kamandalu56 and said: - 'I am going to throw this water down to the worth. Wassesever one of you can drink it all up in the air without letting any of it reach the sartio will be looked upon as the wiser and braver of the two, and he shall be as happy as if he had bathed, given tithes, observed ceremonies and worshipped on the earth.' So raying he threw a little water in a very thin stream into the deva-tirtha. Shanraukha and Vinigaka true t very hard to drink up all the water, while it was in the act of falling, but they did not surevert (in doing so). The water fell down on to the earth in the Sahyadri mountains, and it fell so quickly that it would have been impossible for even Vaya to have caught it. Being very apery and disappointed, they (i. e., Shanmukha and Vinayaka) began to pray to Siva. He and his wife Gangast came and said : - 'Your efforts are vain, you had much better do as Brahmi tells v at. The water that fell from the hands of Brahma shall be known as the Brahma-Tirtha, and he who bathes in it shall go to heaven.' On hearing this, Kumira took some water, charged with the efficacy of his austerities, and threw it down in front of the Brahma-Tirtha. He then howed down before Mahesa and prayed to Brahmi, whereupon Brahmi, being pleased, told him that the water he had thrown down should be known as the Kumara-Tirtha. He who bathes in these two tirthus shall obtain the same amount of merit as if he had bathed in the Ganges and in the Godavari. This Kumara-Tirtha is at the foot of the mountains. The two springs are in the same forest as is the Panchalinga-Tirtha."

" Paramésvara hurried to the spot where Gapapati and his wives were turned into stones in consequence of his curse. He observed their condition from a distance, and being very sorry for them he began praying to Vishau, facing towards him and begging of him to release them from the effects of the curse. He was feeling hungry and thirsty, wherefore Vayu-deva brought some tila,58 and put it in his mouth. Paramtivara eat it, and in consequence became a little refreshed (strengthened). Meanwhile, by the grace (or interposition) of Hari the curse was removed. Narada who had come to the place, when he saw this, treated Ganapati and his wives with great respect, and held a conversation with them. He (Narada) could not find any water wherewith to worship Siva, so Vinâyaka made a trench with the little finger of his right hand into which water flowed, and this water was used by all for the purpose of worshipping Siva. To this water Narada gave the name of the Vinayaka-Tirtha."

A translation⁵⁸ of the tradition of the Maniguni Temple as obtained from the authorities, (i. e., from documents in their possession).

In Saka-St. 1341, on the fifteenth day of the month Chaitra in the Samvatsara Vilambi, I, Mâdhava, minister of the brave and learned monarch, Matkari Maharaja, have, in accordance with orders received from the king, assigned the revenues of the siz villages of Kalhalli, Kalugar, Savale, Barasguni, Badagi, and Maniguni to the name of the god Tirumalėsa of Maniguni, the husband of Lakshmi; a most powerful monarch among the gods. ready to grant to his devotees whatever they may desire: who thus granted a boon to Prahlada and who conferred on Vibhishana the sovereignty of Lanka; the possessor of such ornaments as a kaustubha, and other (ornaments), also of a golden throne (pálki), studded with precious

⁵⁶ A vessel for keeping holy water in. Brahma is nonetimes depicted as holding it in his hand. Siva likewise, It is specially used by sannydais. Ascetics alone are privileged to carry the same dain. The name is also used for the gourd of the Cucurbita angenaria, which is carried by excettes for receiving alms such as handfula of rior, etc.

⁵⁷ This is curious. Siva is called Ganga-dhara, occasionally. Gangadhara means the upholder of the Ganges, in allusion to the legend which represents him as receiving the river on his brow as she fell from heaven on the intercession of the saint Bhagiratha, but nowhere else is he described as the husband of Gangt. She is said to have been the wife of king Santanu, to whom she bore eight some.

⁵⁹ The whole of this account seems garded. Matter, the king all alled to, is unknown to history. He was probably one of the petty chiefs belonging to one of the branches of the great Challetyn family. The attempt to connect the great Madhava, who must have mornished some eighty to ninety years earlier than Mathavi, is somewhat ludicrous.

stones wherein to be carried (lit, for his use) at the time of the great feast, which takes place etery year.

Another pious Kingso of the East, named Vijayadhvaja, who was laboring under the misfortune of being childless, came and took up his abode at Venkatadri, where he remained wershipping at the shrine of Venkatilia. One night he dreamed that a Brahman told him to go on a pilyrimage to the boly place of Maujguni and to bathe in the tirthas there, and that then his desire would be gratified. He then awoke from his dream, and found that it was dawn; placing confidence in his dream, he left the mountain of Venkatadri and started, with his family, for the holy place Maniguni. It took him five months and twenty-two days to accomplish the (contemplated) pilgrimage, and it cost him a great deal (of money); still he did not mind this, but on the contrary was very much pleased to finish the journey. He then wished to go further on to Gûkarna and consulted with his wife about it, whereupon she told him that she was already pregnant about two and a half months, and she therefore entreated him that they might return home and go to Gôkarna another (lit., second) time. The king was overjoyed at hearing of his wife's pregnancy from her own lips, and ordered that a stone should be inscribed shewing that he made over the revenues of the four villages of Hosûra, Bandal, Tejparu, and Bengavi to the god Tirumalêsa of Mañjgunî. Afterwards his wife came and entreated him to make over the revenues of the three villages of Kursi, Chamani, and Gund to the same god of Mañiguni in her name, as a token of her faith in the god. The king, being very much pleased at this speech, gave orders to his minister Srîpati, and to his family priest Rümakrishna Upadhyaya, to make over all the revenues of the above-named seven villages to the name of the god Tirumalesa of Mariguni. According to the orders of the king. they both caused a stone to be inscribed as a memorial of the above-mentioned gift, on the second day of Magha in Saka-St. 834.

In the time of Tirumala Yûgin there were — a golden crown, an ear-shaped ornament set with jewels and pertaining to the crown, a pair of golden shoes, etc.

After the lapse of some years Gôvinda Nâyaka, as directed in a dream, presented a padaka, that is, an ornament shaped like a pipal leaf, usually attached to a necklace and worn round the neck, locket fashion.

A king of Sonds, by name Sadasivaraya, gave a golden cuirass (armour) and cuisses (thighpieces) and some other ornaments.

During the time of the English a golden serpent-bed sacred to Venkatêśa (nágaśayana), gold and silver armour, and various other ornaments, have been added.

THE DEVIL WORSHIP OF THE TULUVAS.

THE STORY OF KOTI AND CHANNAYYA — (continued).

The palace was broken down, as if it were trodden down by heroes who had to fight seven battles. Channayya went to Balitimar at Panja, pushing, with his dagger, a stone which could be drawn by seven and seven elephants. It

The king here indicated must, I think, have belonged to the family of the Kadambas. He may be identical with Vijayavarman. The whole of this story is, however, apocryphal; nothing but the names are known of the rulers of this family between the years A. D. 750 and A. D. 1068. The Saka date given here corresponds to about

¹⁶ I. c., fourteen elephants.

"O foolish Kemira! Silly Kemira! Opium-cating Kemira! Brang-smaking the hand Sour-târs-drinking Kemira! Swollen-legged Kemira! Spindle-shauked Kemira! Snub-besed Kemira! Broken-toothed Kemira! Pot-bellied Kemira! Big-headed Kemira! If we drag you to the East, we will beat you with balls of earth from a gram-field. If we drag you to the West, we will make you eat the sand of the sea. If we drag you to the South, we will make you mount the Ghât of the god Tillinga. If we draw you to the North, we will make you ascend the mountain of the god Basinga," said the heroes. "Before we wash our faces we shall go to Brahmā at Kemmulagē. When we go there we will take little Chancayya of Edambūr," said they.

On the road they saw ten or fifteen gudis at Kemmulage.

- "What mean these, Little Channayya?" asked the heroes.
- "You will die yourselves, but you will kill me also," said he.
- "What are we looking at? Is it a bastiof the Jains? Is it a palli of the Mappiles? Is it a church of Kudumba? Is it the door and house of a rich man? Is it the hut of a poor man?" asked they.
 - "Aho heroes! You kill me," said he.
- "Go and hide yourself under a small mango tree, like a fruit under a leaf," said the heroes.

When they went to the forest of Kemmulage, a Brihmans, having finished his daily pûjû, was going home to his household pûjû. They asked the Brihmans for some sandal from the god, and said they would take their offerings to the god.

- " Pûjd for to-day is now finished; come to-morrow," said the Brahmana.
- "If you are a Brâhmana who knows the particulars of all Bástras, you had better see us perform a pûjd with an upright heart!" said the herces, and stood with bended heads on a flat stone and prayed:—"Let a drum tied to a coccanut tree, and another drum hung on an areca tree, and let all the other musical instruments be heard! Let the sound of a horn and of a gun be heard! Let a torch that has been extinguished burn again! Let a golden plate be placed at the door!"

They made Brahma Bhuta come to them, trying their best and not letting him go. Then all the musical instruments were heard, and all men and women trembled.

- "What is this wonderful thing, this wonderful enchantment?" said the Brahmana, as he went to perform pujú at home, and sat down to take his dinner. Then he returned to the temple running, and found the heroes standing with bended heads on the flat stone.
- "One should beat these Billavar boys with a cocoa leaf. One should beat these Billavar boys with a bundle of prickly twigs," said the Brahmana.

Said Channayya:—"What do you know, O Britmans, about lucky hours and times? Britmana, you told us the day, the hour and the time; what do you say now? If you are a Britmana, who is acquainted with the details of the Bistras, shut one eye and open the other eye; bend one leg and make straight the other leg; and then I can examine all the Sistras. Now, Britmana, open your eye that is shut, and shut your eye that is open?"

He could not open his eye that was shut, and could not shut the one that was open. He could not make straight his leg that was bent, and he could not bend the leg that was made straight.

"Brâhmana, who you are and who are we ? If This is not an earthen pot, and not even a relation of a Brâhmana," said they.

Then the Brahmana became possessed by Brahma Bhuta.

"O Khill O Channayya! Offer to the god the present which you have brought," said he.

A figure of Brahma was offered, and läkhs of Rupees, and Brahma made a steel ball in the bellies of Kôṭi and Channayya. Thus they offered their present to Brahma Bhûta and took sundal.

"O Brahmâ, we must make you a present. Do you worship the god with flowers," said they. They then left the place and went onwards with the intention of getting a present and honor from the Edambûr Ballâl. They stood under a small mange tree and called out: — "O Edambûr Kinnyanna! We have offered to the god a present and taken sandal. Now let us go! O Kinnyanna, we have been to the Edambûr Ballâl in our childhood.

(To be continued.)

FOLKLORE IN THE CENTRAL PROVINCES OF INDIA.

BY M. N. VENKATSWAMI OF NAGPUR.

No. 1. - The Thousand-eyed Mother.1

Oxce upon a time, when Ammavaru,³ the goddess of small-pox, had been making fearful havoc amongst the inhabitants of a certain town, the fond mother of an only son, in whom all her affections and hopes were centred, with a view to escape the wrath of the angry Mâtâ,³ fled across hill and dale, wood and water, not knowing whither she was flying — such was her fright — until, in a dense forest, she was met by an old woman, who was no other than the goddess herself in disguise. Said the goddess:—

- " Daughter, whither are you flying?"
- "Mother, I have only this son whom you see here, and I am trying to escape from the wrath of the goddess, who is devastating the whole town," replied the affrighted mother.

Receiving this answer to her question and seeming not to care anything more about the woman's flight, the old woman asked her to be kind enough to search for lice in her head, for, she added, she was very much pestered by them. The younger woman good humouredly began to search for the lice, both the women squatting themselves on the ground for the purpose, in the dishevelled hair of the old woman, when an extraordinary spectacle presented itself—the old woman's head was full of eyes! Very much surprised, the young woman exclaimed:—

- "Your head is full of eyes, mother; may I know who you are?"
- "Daughter," said the other, "do you not know who I am? I am the Thousand-eyed Mother, and how can you think of escaping by flight from the vigilant watch of so many eyes?"

At this the young mother prostrated herself at the feet of the dévi,4 and asked what should be done to save her only son, who was the object of her life.

"Return," said the goddess, "to the town, and no harm will befall either your son or yourself."

With these words the dévid disappeared, and the woman and her son, who had thus ingratiated themselves into her favour, pursued their course back to the town. The goddess, true to her word, preserved them in the midst of the pestilence, which raged on all sides, attacking all without any distinction.

¹ Narrated by Chinta Poetti, an old man of Nawabasti, Nagpür.

This is a Telugu title of the goddess of small-pox.

* Is a Telugu name for the goddess of small-pox.

* Is a Telugu name for the goddess of small-pox.

It may be remarked that devit in Hindustant frames of the goddess."—ED.]

Note

When anyone says that small-pox is contagious to a high degree and that such and with persons — adults and children — would not have died had they not touched or come in contact with their small-pox-stricken relatives, the old people at once narrate the above story: the unoral being that, if we are to be attacked by small-pox, we must be attacked, no matter how or where; and if destined to die by it or from its effects we cannot escape, as we are under the observation of the Thousand-eyed Mother.

MISCELLANEA

THE AGE OF THE SATAPATHA BRAHMANA.

A FEW days ago, when reading the Bathapatha-Brahmana, I discovered a passage in it. from which it can be conclusively shewn that the age of that Brahmana, or, more properly, of that portion of it in which the passage occurs, is about B. C. 3000. I had a mind to write a detailed paper on the matter on some future occasion, when I should have time to do so; but, on reading Dr. G. Thibaut's paper in the April number of the Indian Antiquary just to hand. I thought it desirable not to delay in bringing the passage to the notice of Oriental scholars. At present I have no time to write on it in detail, so I only give the passage with its translation, with one or two remarks on it, and the approximate time of the phenomenon referred to in it.

The passage runs as follows:— एकं हे नीवि क-स्वारीति वा अन्यति नक्षकाण्ययेता एव मूर्विद्या करकु-त्तिकास्त्रहूमानमेवैतदुपैति तस्मास्कृतिकास्वाद्यीय ॥ २ ॥

Translation:—Certainly one, two, three, four; so [are] other nakshatras, and these only are many, which [are] Krittikh: surely [he who consecrates the sacred fires on Krittikh] gets that plenty of it; [one] should, therefore, consecrate [the sacred fires] on Krittikh. These certainly, do not deviate from the castern direction. All other nakshatras deviate from the eastern direction. His two [sacred fires] become consecrated in the very east. He should, therefore, consecrate [the fires] on Krittikh.

The Krittikah, or Pleiades, are here spoken of as not deviating from the east; while all other nakshatras are said to do so. Now, since in popular language all sakshatras rise in the cast and set in the west, we cannot understand the above description of the Krittikik in the popular sense; for in that case their appearance in the east cannot be contrasted with the other nakshatras. We must, therefore, interpret the passage to mean that the Krittikik were always seen dos

east; while other nakshairus were observed eather to the right or to the left of this point. Translated into modern astronomical language this means a great deal. It means that in those days the Krittikah were on the equator, or that their declination was nil, when the passage was composed.

The heavens are now divided by imaginary circles for the purpose of determining the positions of heavenly bodies. But in old days these conventions were unknown; and the passage in question is at once interesting and important for more reasons than one. In the first place it shows how the Vedic Bishis carefully observed the difference between the positions of the different neachstree; and secondly, what is more to the point, how they managed to express the idea of declination in a simple and rudimentary manner. I do not think that it could be better expressed, if the present method of imaginary sircles is not to be utilized. These old Vedic observers seem to have approximately, if not accurately, determined the due east point, and they must have observed that the Krittikah never deviated therefrom. As remarked above, this would be the case, if, to use the modern astronomical language, the Krittikth were then on the equator. Now we know that, on account of the precussion of the equinomen, the place of the Krittikah, with reference to the equator, is not always the same. At present they are to the north of the equator. We can calculate the next preceding time when they were on the equator. Taking the annual precession of the equinoxes to be 50°, and calculating roughly, I find that . Tauri, the brightest ster of the Pleinden, was on the equator about 2000 B. C., or, roughly speaking, in 2000 R.C. If we take the amount procession to be less than 50°, which is probable, we are carried to a still earlier period,—earlier by about a hundred or two bundred years.

Mose, there is nothing which is doubtful about the notual place of the Krittikih at the time. We have a distinct point to start with in enculation. In my epision, no other interpretation of the passage in possible. I have no time to find by actual calculations whether any other nakshatra, was on the equator at the time; but, from a rough sketch of the position of the equator and ecliptic at that time, I see that one star of Rohini, three of Hasta, two of Anuradha, one of Jyėstha, and one of Aávini, were near the equator, but not a single star of the 27 or 28 nakshatras, except perhaps one or two of Hasta (β and ε Corvi), was then on the equator; neither of these last two, however, is taken as a yégatard of Hasta in later astronomy. The proper

motion of stars is not taken into account in any of the statements above.

The Passage¹ speaks of the rising of the Krittikah due east, as occurring at the time, and not as a thing past. And, in my opinion, the statement conclusively proves that the passage was composed not later than 3000 B. C.

NOTES AND QUERIES.

A VOLUNTARY POOR RATE BOARD IN INDIA.

In Musaffargarh, especially in the Alipûr takell, are found unofficial panchayats in towns, exercising many of the functions of Poor Rate Boards. They levy a rate, generally assimilated to, or based upon, the Government octroi. No one thinks of objecting to pay this. The money is kept by a treasurer, who disburses it on the written order of one or more of the paickéyat.

The objects of expenditure are mainly those of alms-giving and entertainment of religious guestsl but occasionally a useful work, like a smal, bridge, is taken in hand. The mode in which the members of the panchayat are chosen is not clear. The institution differs in some respects from the social panchayats found in Dehli and elsewhere.

R. M. in P. N. and Q. 1883.

BOOK-NOTICE.

Dr. BÜHLER ON THE ORIGIN OF THE INDIAN BRAHMA ALPHABET.¹

THE appearance of one of Dr. Bühler's Indian Studies is always eagerly welcomed by scholars on this side of the Arabian Sea : for we are certain of finding in it something new and original. illuminated by the steady light of experience, born of ripe knowledge. His essay on the Brahma Alphabet need be no exception to the rule, and probably most of us will be ready to admit after its perusal, that a long-vexed question has been finally set at rest. After an introductory chapter discussing the various theories hitherto held regarding the origin of the alphabet called by Europeans, Lath, Southern, Indian Pali, Indian or Maurya, and by Hindés Brahmi Lini. Dr. Bähler states briefly that the results at which he has arrived confirm the views of Prof. Weber. that the Brahma is derived directly from the oldest Phoenician Alphabet, as against the theories of (1) Cunningham that it is an original Indian invention, of (2) Deccke that it is descended from the Assyrian cuneiform characters through an ancient southern Semitic Alphabet, of (3) Dr. Isaac Taylor that it comes from an Alphabet of South Arabia, and of (4) M. J. Halevy, that it is of a composite character, partly derived from

Aramaic, partly from Kharôshthi, and partly from Greek.

When Prof. Weber started his hypothesis. the list of quotable references in the more ancient Indian literature regarding writing was a short one, but since that time further explorations have brought to light various additional pieces of evidence. Amongst the older dharmasastras. that named after Vasishtha, which probably dates from some centuries before the beginning of our era, and which is older than the Manusamhito. mentions written documents (lekhya) as proof of ownership; but the most fruitful researches have been those in the canonical works of the Southern Buddhists, especially in the Jdtakas. Dr. Bühler quotes several játaka stories in which writing is mentioned :- a slave gets himself a rich wife by means of a forged letter (lekha), a teacher corresponds with his pupils, a king with a future Buddha, while in two instances reference is made to official correspondence between kings. In the Ruru-játaka, a debtor invites his creditor to come with his bonds, and in several instances2 particularly important records were inscribed on gold plates. The Vinaya-pitaka also refers to writing (lekhd) and writers (lekhaka) and to the cutting (chhindati) of inscriptions. In the Mahavagga, we

Origin of the Indian Brahma Alphabet, with a table. Vienna, F. Tempaky.

² One instance not mentioned by Dr. Bühler may be quoted, — the Sambhava-jdtaka No. 515, Fausböll, V. 59.

I I do not know whether the passage is noticed by Weber in his emays on the makehatras. I saw the compa in Norember last; but they, being written in German, are a sheaf letter to me.

² Rubian Bradier by George Bühlet. No. III., on the

find mention made of a proclaimed thief (likhitaké chôrô), and of the education of a boy at school in lekhd 'writing,' ganand 'arithmetic,' and rung 'forms.' By the latter, Dr. Bühler ingeniously understands the bazar and agricultural system of accounts now taught in schools, after boys have been taught the simple rules of arithmetic. In ancient times, when coins were rare, specimens were placed before the pupils, which they had to handle and look at, in order to learn their form, weight, and marks.3 Thus the lekha, ganand and ring of the Mahdvagga correspond to the three "Rs" still taught in indigenous Indian schools. Dr. Bühler refers only to the present custom of Western India, but my experience of the schools of Eastern Hindûstân has been the same. These references to the art of writing may be taken as dating from about 400 B. C. The oldest words used for writing all mean originally 'to cut,' such as chhind; or 'to scratch,' such as likh; 'the scratcher,' lekhaks; 'scratching,' or 'scratches,' lekha; and 'the indelible,' akkhara. On the other hand, lipi which we first meet in Panini (cir. 350) B.C.) means literally, 'smearing,' and points to the use of ink.

Space does not allow me to do more than allude to the interesting digression of Dr. Bühler in the various Indian alphabets.—The Brahma and the Kharoshthi ('Ass's Lips,' mentioned by the Chinese under a similar name), the sixty-four alphabets mentioned in the Lalita-vistara, and the eighteen of the Jaina Agamas.

As in the indigenous schools of the present day, the Brahma Alphabet had, according to the oldest authorities, only ten vowels, ri, ri, li, and If not existing. At the present day in and h are added, and each is combined in our schools with each consonant, forming the so-called bardkharf, or sets of twelve, 'the book in twelve sections 'which Hiuen Tsiang describes as taught to Indian children in the seventh century A. D. As regards the omission of ri, ri, li, and li, an important piece of evidence is found at Both Gaya, where a series of mason's marks gives the alphabet as far as ta, but omitting these vowels. This proves that separate signs for these vowels did not exist in 300 B. C., for, while omitting them, the alphabet contained the vowels at and an, the visarga ah, and the guttural sa, which were not required for the vernacular Prakrit of the time, and the use of which shewed that the alphabet, then current, was adapted to the expression of Sanskrit.

Dr. Bühler next considers the oldest form of Brahmi Lipi, and argues that the very consider

able variations in the forms of its signs point to the fact that it must have had a long history before the time of Asôka. Not only are there variations in form, but instances occur of its being wristen from right to left instead of from left to right. The varying forms are capable of being classified according to locality, and so far from the characters being homogeneous, they may be divided into two main divisions — a northern, and a southern, — each with sub-varieties. There are also differences between archaic and advanced forms, all of which Dr. Bühler discusses in great detail. He finally concludes :—

To me it seems that these (possition) are most easily explained, on the supposition that several, both archaio and more advanced, alphabets existed in the third century B. C., that an archaic alphabet was chosen for the perpotuation of Addin's Edicts, and that the clorks mixed the forms. And in support of this view I would adduce the Jaina tradition, according to which many alphabets were used about 300 B. C. But, even if we leave aside all conjectural explanations of the facts, it remains undeniable that the writing of the Edicts is in a state of transition, and this along is sufficient to warrant the assertion that the religible tertainly had a long history.

Taking now the question of coins into consideration, the very ancient inscribed coins, found in North-Western India, leave no doubt that since the beginning of the historical period, the Brahmi Lipi has been the paramount Indian Alphabet, and that the Kharoshthi is a later Alphabet, of Aramaie stock, which held always a pecondary place only in a very confined territory. In connexion with this point Dr. Bühler draws attention to the lately discovered Siddapur Edicts, written in Brahma characters, in which the scribe has added at the end his qualification lipikarden 'the scribe,' in Khardahthi characters. Dr. Bühler says 'this looks like a joke or a boast, as if Pada, proud of his accomplishments, had been auxious to make it apparent that he knew more than the ordinary characters. And as he was in the royal service, it is not unlikely that he may have acquired a knowledge of the Kharlehthi during a stay in a northern office.' It is atrange how exactly history repeats itself in India. At the present day, a Kayasth in Ribar, who writes a document in the Knithl character in a Government office, makes it a point of honour to subscribe his own mains, as writer, in the Persian character, the Kaithi being the direct descendant of the Brihma Alphabet, and the Persian well corresponding to the Santtie Eharishthi,

Having these elected the way by his historical inquiry, Dr. Hähler sets himself to discuss the problem of the origin of the British Alphabet.

² [Market girls were thus taught in Upper Burne up to the last parameter, my, 20 years ago. — Ro.]

He rightly observed that the only safe way to compare the Brahma with Semitic signs is its that the comparison must be based on the with at from out the Indian Alphabet, and on actualto courting Semitic signs of one and the same period, withat the comparison may include only such irregular equations, as can be supported by analogies from other cases, where nations have larrowed foreign alphabets: and (3) that the e inpurison must shew that these are fixed minerales of derivation. Applying these sound rules it seen appeared that, while the Southern Semitic characters could not be considered as the origin of the Brahma Alphabet, it became possible to identify in the latter all the twenty-two Northern Semitic letters, and to explain the formation of the numerous derivative signs. which the Indians were compelled to add. A table is given shewing, letter by letter, the connexion between, on the one hand, the Archaic Phonician, and the Moabite stone characters. and, on the other hand, those of India; and, given the principles of derivation which Dr. Bühler lays down, the resemblance between the characters leaps to the eyes. The following quotation illustrates this principle in a few words, and as clearly as possible.

A superficial examination of the Bråhma Alphabet shews the following chief characteristics:—

- (1) The letters are set up as straight as possible, and they are, with few exceptions, made equal in height.
- (2) The majority consists of vertical lines with appendages attached mostly at the foot, occasionally at the foot and at the top, or rarely in the middle: but there is no case where the appendage has been added to the top alone.
- (3) At the top of the characters appear mostly the ends of vertical lines, less frequently straight horizontal lines, still more rarely curves on the points of angles opening downwards, and, quite exceptionally in the case of the letter ma, two lines rising upwards. In no case does the top show several angles, placed side by side, with a vertical or slanting line hanging down from it, or a triangle or a circle with a pendant line.

The principles, or tendencies, which produced these characteristics, seem to be a certain pedantic formalism, a desire to have signs well suited for the formation of regular lines, and a strong aversion against all topheavy characters. The natural result was that a number of the Semitic signs had to be turned topaytury or to be laid on their sides, while the triangles or double angles, occurring at the tops of others, had to be got rid of by some contrivance or other. A further change in the position of the signs had to be made, when the Hindus began to write from the left to the right. They had, of course, to be turned from the right to the

left, as in Greek. Instances where the old position has been preserved, are however met with, both in borrowed and derivative signs.

Given these principles of derivation Dr. Bühler's table is almost self-explanatory. Specially ingenious is his suggestion that in certain cases the substitution of a dot in a later Indian form for a circle in an older Indian one, indicates that the persons who invented the dotted form wrote with pen and ink. For the actual forms of the letters in Dr. Bühler's table the student must be referred to his article, but the following gives the net result (without giving the actual forms) of his inquiries in a succinct shape:—

SOME EARLY SOVEREIGNS OF TRAVANCORE.

BY P. SUNDARAM PILLAI, M. A.

Preface.

THE late Mahârâja of Travancore observed, in one of his public lectures, that if India could be considered a microcosm of the world, Travancore could be with greater justification regarded as the epitome of all India. The observation was made with special reference to the variegated natural features of Travancore and to her equally rich and varied flora and fauna. It is, however, no less applicable to her population. It would be difficult, indexel. to find elsewhere in India, in so limited an area, a people so varied and typical of the mixed races that inhabit it. The two predominant factors of Indian civilization - the Aryan and the Pre-Aryan — are to be found in Travancore in every degree of fusion. From the aboriginal Kânikâr, or hillman, to the Vaidika Nambûri Brâhmana, what stages of the meeting and mingling of the two races can we not perceive in the endless distinctions of caste so eminently characteristic of the extreme South of India! The subtle forces set in motion by the great Aryan race to subdue and absorb into its own polity the earlier races of India may be still seen at full work in Travancore. And there, again, may be seen, taking place under the very eyes of the observer, the gradual evolution of all the forms of marriage known to the student, endogamous, exogamous, polygamous, punctuen, and what not.1 Arrested in consequence at different stages of their natural growth, may be seen also all conceivable laws of inheritance. Equally diversified and full of philological import is the language of the country. Exactly as the practised ear perceives all possible stages of corruption between pure Tamil and pure Malayalam, on passing from one end of the land to the other, - say from Cape Comorin to Paravûr; so also may the critical student notice all varieties of mongrel mixtures of Sanskrit and Tamil, as he descends from the proud poems of the crudite few to the popular ditties of the illiterate many, - from a Bháshá-Sákuntalam, for instance, to a Türrampáttu. Every phase. too, in the evolution of that all-embracing conglomeration of faiths, ceremonies, and philosophies, called the Hindú Religion, from the grossest fetishism, worship of trees, of snakes, of evil spirits and what not, to the highest Vedantic school of Sankaracharys, - himself supposed to be a native of the place, — finds in Travancore its votary to this day, — not to speak of the numerous representatives of foreign religions, such as the Syrian Christians, who claim to have received their gospel direct from Saint Thomas himself. With regard to manners. customs, dress, and ornaments, infinite is the variety that obtains. Each caste would appear to have been bent upon originating and appropriating to itself a particular form of these natural adjuncts of social organization. Even more tempting than all this pleasing variety, is, to the student of Indian ethnology, the general air of primitive simplicity that, despite its complications. pervades the entire society, its language and institutions, its manners and traditions. And the air of primitiveness is by no means deceptive. Most of these social peculiarities are in truth but strange survivals of what at different stages was the rule in all India, at any rate in the peninsular portion of it. Endless particulars from the daily routine of individual and social life might be given to illustrate how strangely things survive in this land, though long extinct elsewhere; but suffice it here to say that Travancere seems to have played, in Indian anthropology, the part of a happy and undisturbed fossiliferous stratum. And it is easy to understand why it should have been so. No internal revolution seems to have ever convulsed her social system so as to effect the past, to which her own remarkably conservative nature inclined her to steadfastly adhere; and as for the violent changes outside her domains, they seem to have never reached her till their fury was spent, so that

¹ Vide L. H. Morgan, Ancient Society. Punches is the Phylara type in form of polyandry).

This term means "a song on the apparation," and markets the story of Milappelightes, the section Tamil spic. It is being fact supplanted in popular favour by more modern songs and means to have but a short been of life now before it.

when, floating down in the fulness of time, their influence came to be felt, the nett, or skeleton, results alone aank into the structure of her society to be preserved unmolested for ages to follow. Thus taking all in all, Travancore, I earnestly believe, deserves more attention from the students of Indian history than at first sight her apparent geographical and historical isolation would seem to entitle her to; her population being so remarkably varied and typical, and the social fabric a veritable mine of precious antiquities in many a department of anthropology.

To the best of my knowledge the mine remains unworked - nay even unnoticed up to date. I do not complain that the history of the people is yet to be written: but I confess I am surprised to find that the political history of this principality, one of the most ancient in all India, is itself a blank beyond the immediate present. Even of the ruling dynasty, whose origin, Mr. Shungoonny Menon observes,3 tradition reckons as everal with creation itself, what information are we in a position to offer to the critical historian beyond a couple of centuries ago? The Travancore Government Almanac' publishes, no doubt, year after year, a list of 35 sovereigns from 1335 A. D., as having immediately preceded the present Mahârâja; but, apart from such indefinite and suspicious names as 'Wanaut Moota Rajah,'s which cannot but detract from the scientific value of the document, what little I know from independent and indubitable sources of knowledge is not in favour of its accuracy. Mr. Shungoonny Menon begins, indeed, his History with Brahma the Creator, but he fills up his first chapter, which brings down the account to Martandavarman, who began his rule just 164 years ago, i. e., within the memory in all probability of the historian's own grandfather, with such questionable materials as to render it difficult to rebut Mr. Sewell's condemnation of the whole as devoid of historical value.6 Considering that of the political history of the country, of the history of the unquestionably ancient royal dynasty itself, we know so little, it is no wonder that we should know still less in the more obscure and less attractive branches of Travancore archæology.

But how long are we to remain in what I cannot but describe as a lamentable, if not disgraceful, condition of ignorance? To a native of Travancore - and I am one - it cannot but be galling to have to wait till competent foreign scholars find leisure to investigate and enlighten him on the history of his own fatherland. He would rather, whether fully qualified for it or not, gird up his loins and be doing something, than be simply mouning over the fact till the fortunate advent of a competent swant. But even should one be willing to wait, the sources of sure information, the facts and things to be observed, do not seem to be endowed with equal placid patience. With the rapid spread of education and the general uprising and commingling of the masses, the very things of archeological import are fast vanishing out of sight. No one with wakeful eyes could live a decade now in Travancore without being constantly reminded of the extraordinary rapidity with which the tide of progress is washing away all old landmarks, even in this retired creek of the so-called "changeless East." Traditional beliefs. ways, and manners are dissolving like spectres in the air. Every caste seems bent now upon giving up its own, for the sake of the forms and ceremonies, dress and ornaments, and even the modes of speech, of some other, which it supposes to be superior to itself. What traits of the primitive Dravidian Venid chiefs could one discover in the Anglicized Nair, or of the Vedic age of simplicity in the Nambûri police constable? However desirable such changes may be from other points of view, to the antiquarian they cannot be more gratifying than the too rapid gyrations of an animalcule can be to the microscopist. To neglect vaccination and

Vide page 43, Part II. of the Almanao for 1894.

Means but the ruling sovereign of Travancore, 'Wanaut' being vened or Travancore, and 'Moota Rajah' or Hitta Tampirda, being the popular way of styling the eldest member of the royal family.
Vide Sewell's Lists of Antiquities, Vol. II., part treating of Travancore.

to trust to irittu is certainly not desirable; to indulge in padaiyant or mock fights, in there days of peace, might be even more culpable; but when the irittu and padaiyant are gone for good, the historian will look in vain for equally good and clear evidences of the past history of certain localities.

The damp atmosphere of Travancore is another source of dread. It is fast demolishing and disintegrating sources of information of the highest scientific value possible. A host of historical temples with valuable inscriptions are fast going to rains. Left to the dissolving influences of nature, or worse still, to the tender mercies of Marâmut coolies,? the temples of the land, with their many and diverse architectural peculiarities and memorable historical associations and inscriptions, will before long either quietly cease to be, or so utterly change their aspect as to present no meaning to the future inquirer. Our sources of historical information then, both ethnical and epigraphical, seem to be all equally moribund, muttering, as it were with their dying gasp: "Observe new or never!" How important, how helpful, these dying declarations of the past are often found to be, only those who have dealt with them can know, and, if I here venture to catch and interpret some of the still voices of antiquity in the midst of which I live, with a view mainly to awaken general interest in our history, I have no other justification to offer, no other apology to make, than that they might ere long cease to be heard at all.

I propose to begin the study with the royal house of Travancore, and I propose also to confine my attention at present to what light can be secured from public stone inscriptions.

Of all the materials available to the critical student of Indian history, inscriptions, as far as they go, are the very best. It may be possible, indeed, to extract a few scattered grains of historic truth from the old and genuine Purines, but only those that have made the trial can be aware of the difficulties and doubts with which the process is beset. Even when the genuineness of a Purina is settled beyond doubt, and its age determined, one ought to have an extraordinary fund of faith, or, as it is called, 'piety,' to lack a sense of insecurity, as one threads one's way through the endiess accounts of divas and asures, and discerns here and there a glimmering, and perhaps distorted, view of matters earthly and human. But whatever may be the historical value of the real and old. Ashidala-Puranas, to follow the Sthala-Mahatmyas as faithful guides would imply an unconditional surrender of all canons of historic criticism. They all profess to be integral portions of the old Eighteen Purasus; but it is an open secret that their manipulation can scarcely be said to have yet ended. To quote a familiar instance, the late Mr. Minakahisundaram Pillai of Trickinopoly, the last of the Tamil bards, used to supply Sthale-Purcase on order; and I know a respected and scholarly physician in Kôttayam is to this day engaged in writing a Mahataya in Sanskrit on his own household deity. But whether old or new, it would be a satisfaction to find in these works of skill even remote references to events historical. For, true to their function, these religious compositions begin and end with gods, and condescend to chronicle only their miraculous dealings with friends and foes.

Local traditions in some countries may subserve historical purposes, though the logical rule for the rapid deterioration of their testimony has always to be kept in view. But in Southern India, all legendary lore is of the most mischievously misleading character. We cannot travel far, even in Travancore, without constantly coming across hills, valleys, streams, temples,

Traffic is a village feast generally in honour of the horoine of the Bliogradighton, evidenced as a disinfectant of small-pox, exactly as it was reserved to in the days of that old Tamil spin; — vide page \$1. Swaminatha Lyer's edition.

^{*} Means literally battle array. It is a dissolutly dranken march past in torchlight, aften ending in something worse than sham fights.

Day labourers in the Government Public Works department. Market is a word of Arabic origin used in Travancore to mark off the native Public Works against from that under European arginstra.

and hamlets, which are fondly believed to be connected with the incidents of the Mahabharata and the Ramayana. As observed by Dr. Burnell, most of them are "merely attempts at explanation of the unknown through current ideas, which, in Southern India, amount to the morest elements of Hindu mythology, as gathered from third-rate sources." In Travancore, even the legitimate names of places, of idols, of castes, of religious dignitaries, and of social ceremonies, which, when carefully understood, bear clear historical allusions, are strangely twisted and corrupted to suit fanciful derivations under the influence of the same myth-making tendencies.

Literature is another of the resources usually open to the student of history, and even in India. too, much valuable and reliable information may be gleaned from the ancient literary writings, so long as their authors had the good sense to be true to nature and man, and to dispense with the crutches of "divine machinery." so uniformly found at every turn in their later limping career. But, unhappily for us in Southern India, we know how soon the Tamil literature degenerated and lost its healthy realism. Copper-plate documents, temple and palace records, and what are called granthavari, or connected accounts, in respectable households of long standing, are less pretentious, though often more fruitful, sources of information; but even these are certainly inferior in point of reliability to contemporary stone inscriptions in open and public places. Copper-plate grants, being mostly the private property of individuals or corporations, always present the chance of turning out to be forgeries in favour of vested interests. As for the other records, it is always impossible to rebut the charge of corruption or interpolation, since they have frequently to be transcribed - mostly by unqualified hands - in consequence of the ephemeral writing materials to which they are generally committed. Unless, therefore, we have clear internal evidence, or other collateral information, it is seldom safe to lean on crumbling cadians. however venerable. On the other hand, a contemporary inscription in a place of public resort. if once deciphered, and its age determined, will afford for ever a footing to the historian as sure and firm as the rock on which it is engraved. It would seem, then, to be the very first duty of those who crave for more light on the past of Travancore to ascertain whether such incontrovertible epigraphical evidence is available in this ancient principality, before proceeding to utilize less trustworthy sources of information. Fortunately for us, inscriptions are not altogether rare in Travancore. I have with me something over one hundred of these ancient stone documents, taken from different quarters, mostly from places south of Trivandram, and, though confining my attention, for the present, to the light they shed on the history of the royal house, I shall have an opportunity of illustrating their general historical value.

One word more I feel bound to add in the way of preface. Since most of the documents I have now the pleasure to place before the reader are in the Chera-Pandya or Vatteluttu Alphabet, the translation I give of them ought to be considered tentative only. The characters of this alphabet, which according to some authorities is the only one original to India, are not yet fully made out. Out of 180 letters, which ought to make it up, Dr. Burnell's conjectural Plate (No. XVII. in his South-Indian Paleography) is able to supply only 96. Until, therefore, photo-lithographed copies of the facsimiles with me are placed before the scientific public, and my readings and renderings subjected to searching criticism, I have no right to claim entire confidence. I may, however, in the meantime, say that each of the inscriptions I have to depend upon has received my best and most anxious attention, and that sufficient time has been allowed to elapse since the collection was completed for patient study and reflexion. I shall further indicate, as we go on, whatever doubts or difficulties still strike me as material to my interpretation. The whole being thus but provisional, I have not made the translations altogether and strictly literal, which would be but rendering them nearly unintelligible in the absence of the originals for reference. They are nevertheless as faithful as I can make them in the circumstances.

¹⁴ Fide Burnell, South-Indian Palmography, Introduction, page 1.

The Sovereigns of Travancore in the 4th and 5th Centumes M. F.

TOTAL OF STATE OF STATE OF

I now proceed to select a period, which is an absolute blank in the lasters of Toyour en. as it now stands. The list of 35 sovereigns given in the Travancore Coreconcer. If the last the as I have already said, with 1335 A. D., so that from the 14th century downwards, on have some sort of account to give of the Travancore royal dynasty, whether absolute by connection on a In Mr. Shungoonny Menon's History, too, we have some sort of account, he were the first that it or loose, only from that date downwards. "In the Kollom year 5 (*30 A. Day, " 2000) 4 this author, "Udaya Marthanda Vurmah Kulasekhara Perumal died, but his succession and and and the particulars of his reign are not traceable from the records. The names and other particulars of many of the succeeding kings are also not in the records."12 He then goes on with his narrative only from 505 M. E., or 1330 A. D., when, according to him, the same and the the pagoda at Vycome12 shew that king Adityavarman "assumed authority over the arfairs of that Davaswam" is or temple. Thus, then, it is clear we have now no information, whichever to give for the first five centuries of the Malabar era.14 Leaving the earlier percents for later research I shall now consider the last two centuries of this blank epoch, etc., the fourth and fifth centuries M. E., and shall try to see how far inscriptions can help in filling up the gap with authentic facts and dates.

In the very opening year of this period, vis., 301 M. E., or 1125 A. D., we find Sri-Vira-Kéralavarman ruling over Travancore. The document—a public stone inscription—in proof of the fact comes from a deserted village, called Cholapuram, about a mile to the east of Oluganacheri, the transit station between Tinnevelly and Trivandram. In this described village stands the neglected temple of Rajendra-Chôlesvara, to complete the ruin of which not man; recurring monsoons are now needed. Of the historical importance of the temple, this is not the place to speak; but if any one wishes to verify the document I have now to present. it is to be found on the western wall of that shrine, engraved in old Tamil characters in four long lines. It is, I think, advisable to warn the visitor that the temple is full of polyments snakes! The document I depend upon runs thus:-

Old Tamil¹⁶ Chölapuram Inscription of Vira-Keralavarman. Sen-Tamil Current.

"Hail! Prosperity! In the year opposite! the year 301, since the appearance of Kollam. with the Sun in the sign of Leo (i. e., in the Malabar month Chingam), we, the loval chieftains 14 of Sri-Vîra-Kêralavarman, flourishing in Vêçâdu, (vis.) Dananjaiyan Kandan of Varukkappulli, Sri-Tougappalla (?) Sri-Saiyan alias Bri Sakkarayudhan of Mannur, Kannan Govindan, the

¹¹ Vide page 89, Shungoonny Menon's History of Travancers.

¹² Vycome, or rather Vaikam, is a populous village about 24 miles to the south of Cookin. According to Dr. Gundert, the word means 'alluvial deposit,' pointing to the probable geological origin of the place. The local deity is called Kôlappan, obviously a corruption of Kôyilappan, showing that the name Kôyil must have been and used to designate the spot, exactly as Chidambaram was in the days of the early Saivs saints.

¹³ Vide page 93, Shungoonny Menon's History of Transacare.

¹⁴ The report on the Travancors census of 1891 says: "The lat Perunal was installed about 314 A. D. about 12 centuries after this there is no authentic record of any value." - Fide page 179, Vol. I.

¹⁵ The numeral above indicates the serial number of the inscriptions as made use of in this paper, while the the below gives the number as in my register.

¹⁶ The description above the line refers to the characters, and the one below to the language of each inscription. For a specimen of Old Tamil characters, see Dr. Hultssch's fassimile of Réjardie's inscription, No. 1, in Vol. II. Part I. of South-Indian Inscriptions. That inscription is a specimen also of what I call Scu-Tamil Current with reference to the language of the document.

¹⁷ Endless are the controversies with regard to the interpretation of this expression as found in the Tiranelli copper-plate grant. For the opinious of Mr. Whish, Sir Walter Elliot, Dr. Burnell, Dr. Caldwell, and Dr. Rultzack,

see ante, Vol. XX. pp. 288, 239. Here, however, the word "opposite" evidently massic "squiesient is."

The expression is asserting additioner.—They were foundal chiefs and not 'paid agents,' as far as I can ascertain.

han a series of the secretary ?). and Kêralasimha Pallavaraiyan alias Vikraman Kunran of the sense billers too discharge of our official agency, do make over the tax in paddy and 1 - 14 N. de - Ir m. Vad sêri, to this side of Mummudi-Chôla-nallûr, as a gift to the god. to be unified for supplying every day four nolli of rice, vegetables, glee, curds, areca-nuts and hetel, and also one perpetual lamp, to the Mahadeva of the temple of Bajendra-Cholesvare, in Manuardi-Chola-nallir glias Köttår, and in order that the arrangement might her as long as the san and the moon endure, we make the gift, solemnly pouring water on the nhar, and cruse also the grant to be engraved on stone."

This theorement proves that Sri-Vira-Kôralavarman was reigning in Travancore, in the that month of the first year of the fourth century of the Malabar Era, or roughly speaking about the latter half of August 1125.20 It proves also that Travancore, or Venad21 as If was the realied, was under him a well-organized principality with loyal feudal chieftains to trans at public business in her name, and levied taxes, as she does to this day, both in kind and in cash. The Government dues even in these backward days, with heavy military charges, could not have been anything but moderate and fair, as the whole revenue of the tract of country, as set apart for the purposes of the grant here recorded, was considered adequate to furnish daily but 4 nalli of rice and sundries to the Mahadêva of the Rajendra-Chillewara temple. This temple, as the name indicates, was founded in honour of the famous Eastern Châlukya-Chôla emperor, Rajêndra-Chôla,22 who, according to the latest researches, ruled from 1063-1112 A. D. over almost the whole of the Madras Presidency, from Kaliura in Orissa to Vilinum on the Malabar Coast.23 The circumstances under which Sri Vira-Kêrala of Vên'il was prompted to dedicate so piously a portion of his revenue to a temple founded by a foreign monarch are, of course, now difficult to determine; but if I am at liberty to venture a hypothesis, I suspect the grant was meant, in all probability, as a political neace-offering to the representatives of the Chôla power in the land.24 It being but thirteen years after the death of Rajendra, Vênad must have been, about this time, just recovering from the terrible shock it had received from the victorious arms of that great conqueror, whose forces, after subduing the five Pandyas,25 overran all Nanjinad, and advanced as far to the west as the ancient scaport of Viliams about 10 miles to the south of Trivandram. Rajendra's was no passing whim of conquest. His vigilance extended over every part of his territories, and he did all he could to consolidate them into one enduring empire. He transformed Kôttâr, the chief city of South Travancore, into Mummudi-Chôla-nallûr - 27 " the good town of the thrice-crowned Chêl ," and left there, not merely the temple of Mahâdêva noticed in the document before us, but what is more, a powerful "standing army" to watch over his interests in this distant corner of his dominions. The Oddars29 and Chaluppars,30 so common all over the southern districts and in Trivandram, mark to this day the extent of the old Châlukya sway in the land. I am afraid, therefore, that Sri Vira-Kêrala was making but a virtue of necessity, when he thus yielded up the tax on the tract of land between Köttår and Vadaseri for the support of the "great god" of

* The equation for the conversion of the Malabar or Kollam era to the Christian is + 824f. I use the Malabar year throughout, as it is the one still current in the country.

¹² The original reads eluttu-chchiqu-vari-pay.

²¹ Vensilu is one of the twelve districts of low or vulgar Tamil according to Tamil grammarians. The Kérala-Ulpatti makes it one of the divisions of Kérala. It is derived from of | = love or desire, either directly or through or, 1'4nd would mean, therefore, 'the land of love' or 'the levely land.'

¹⁴ I say Chela power advisedly, for it seems probable that Rajendra's dominions in the South fell to the lot of the Choles rather than to the Eastern Chalukyas.

²⁴ Vijja tan jinil migawar-alvarum kufta kiffinai-kk!ffilat p Ism nt. Kalingattu Parani. 🕦 Vilai konju Vilinan-alittahun Silai konjadum dandu kond-allaus. Kalingattu Parani.

M Rajaraja is called "Mummuji-Châla" in an inscription dated the 14th year of his reign; — vide Dr. Hultzsch's Report for 1892.

^{*} Called nilgippadal in an inscription which I have, dated in the 39th year of his reign.

to O low means the men of Oddiyam or Orissa. Rajendra was himself first anointed king at Vengl in A. D. 1968. The word is evidently a corruption of Chalukkar or Chalukyas.

Rajendra. The inscription, however, proves, for one thing, that the White paper, where were gradually emerging, with the opening years of the fourth century M. H., from the above with a Chilukya-Chola eclipse. The receipt of a grant is an acknowledgment of the receipt of grantor to make the grant. His action argues, therefore, both practical statements states manlike sagacity on the part of Vira-Kêrala; for he is shewn thus to have lake record to h the situation and made the best of it.

That the policy of conciliation with an enemy too powerful to at cases continue, cononly a preliminary for the recovery of lost territories, as opportunities exparted, as providing the document I have next to present, dated just eighteen years later. This is employed white from Tiruvallam,31 a petty village near the old mouth of the Karamana: river, about four miles to the south of the Trivandram fort. Within a recompalar enclosure, on the eastern bank of the river, stand three chief shrines, of which the casternmost, dedicated to Mahâdêva, is certainly the oldest. The middle one — the smallest of the three — is now said to be sacred to Brahma, and it is on its western wall that the following grant is assertized, in rather small and superficial Vatteluttu characters, running over ten closely packed times. Being close to a holy bathing ghat, still in use, and being in some measure related to the central temple in the capital, all the three shrines are in pretty good condition, though, because of the exposed situation, the inscription itself is fully open to the efficiency influenced of the sun and rain. The translation of this rather lengthy record would run thus : -

No. $\frac{2}{47}$. Vatteluttu Old Malayalam.33 Tiruvallam Inscription of Vira-Kérulavarman.

"Hail! Prosperity! In the Kollam year 319, with Jupiter in the sign of Scorpio, and the sun in Capricornus (i. e., the Malabar month of Makaram), was done the following deed." Tenganada, belonging to the loyal chieftains of Bri-Vira-Keralavarma Tiruvadi, graciousiv ruling over Venid, being recovered,36 the said chieftains make over in writing the tax marable in paddy within the area of Nigamattir, amounting to * *, and the duties called cheerdu and alagerudu, as well as the tax on hand looms, in order to provide daily, in all. 7 mili of rice. for the use of Brahmans worshippers (namaskaram), and for evening offerings to the Maka dêva, Tirukkannappan,36 and Ganapati in the temple of Tiravallam, and also to provide once a month one candelabrum (dipandid), for each of the (first) two deities. Accordingly from this time forwards. Mahadeva shall have two noti of rice, Tirokkannannan two nuli, Ganapati one nuli, and the worshipping Brihmanas two nuli. Moreover, the cight coins37 given in addition by the men of Kattuieri, being also handed over as nell, to Narias Tadar, he shall make a set-off with that money for the amount he has invested in the purchase of Araviyûr-compound, and he shall further, after making forthwith a flower garden therein, supply the three deities with two garlands each, and take for himself (in return for his labour) the boiled rice offered to the gods. Karana Tadar, on his part, while accepting the aforesaid grant of the tax due from Nigamattir, amounting in paddy to * , and the duty called alagerudu, as well as the tax on hand looms and the 8 coins given as well, agrees to collect the said dues in half-yearly payments, to grant receipts therefor, to meet the charges thereon, and to furnish the dip mails, as well as the garlands from the flower garden (now

²¹ Vallum means, according to Dr. Gandert, a place for watering fields. Would not valless mean the same in illavum chellavum vallavum varddhikkum in the Bina Product

³² This river seems to have frequently aftered its place of discharge even in recent times. The shifting boundary of the two adjoining talks is a guide as to what the course was, when the administrative divisions were last arranged. 35 Old Malayslam differs but little from current Tamil. I should have reskoned it as San-Tamil but for certain inflexions — for instance varue instance of removed ; armenterallisms instead of surrest installed

^{34 &}quot;Bayda kāriyam-dvidit" is an explotive to introduce a decrement. * The word is tipitta it. There is nothing to show that the Tamil maint of this name had ever a temple at this upot. The word

refers only to Krishna, now the presiding daily. 37 Achehu clearly means a coin, though it is impossible now to determine its value.

ere was to be appeared. If Natura Tudor [should ever fail],28 the village association, the if your count " and the tempte managers are empowered to carry out this arrangement, a wifter the man't the same endore, through such agencies as they might be pleased to المعقد فيبرد ال

We have here irrebutable evidence of the continuance of Sri-Vira-Kêraļavarman's rule up to Makara 319 M. E., or roughly speaking up to the end of January 1144. Heating his reign hasted, or when it accually commenced, we have as yet no means of descriming, but that it did last for 18 years and 5 months at the least is established by the two inscriptions before us. The addition in the second document of Tiruvadi, or "holy feet," to the name of the sovereign, if it means anything at all,40 may be taken to indicate the expansion of his dominions and the consequent growth of his power, since we first met with him. The re-establishment of his authority, so far to the north as Trivandram, affords of course clearer evidence of the same. Though I have not yet been able to identify the exact heality of Tenganad, I have no doubt it must have embraced the sea-coast from Tengapatnam on the mouth of the Kulittural river to Tiruvallam, including the famous scaport of Vintam. The enemy, from whose hands Tenganad is here recorded to have been recovered, may have been, therefore, the representatives of the very same Chola power that Kêralavarman, in the earlier part of his career, found it wise to conciliate.

As for other inferences from the inscription before us, particularly about village associations, temple authorities, and the curious personage, Bhattaraka Tiruvadi, I would fain vait till our data accumulate. It is quite the fashion nowadays to suppose that ancient native Indian government was despotism, pure and simple, and I would wait till more facts are brought to our notice about the constitution and powers of the early village associations of Travancore, before I venture to discuss the soundness of this general assumption. When we remember the diverse secular functions the Hindu temples 41 were designed to discharge. besides being places of divine worship, we cannot be really too curious about their constitution and management. But I would allow the Buddhist monk, Bhattaraka, to go once more in proof, through his slow evolution of Bhatturaka Tiruvadi, Badara Tiruvadi, Balara Tiruvadi and Pashira Tiruvadi, before I would identify him with the modern Pisharadi, whose puzzling position among the Malabar castes, half monk and half layman, is far from being accounted for by the silly and fanciful modern derivation of Pisharakal + Odi, Pisharakal being more mysterious than Pisharadi itself.43

A word or two about the taxes and duties mentioned in the above document would prove more pertinent to our present inquiry; but I am sorry I have failed, even after repeated inspection of the original itself, to make out, not only the shorthand symbols 48 given to signify the quantity of paddy, but also what is intended to be read by the combination of letters which, as far as I can discern look like 'chévadu' and 'alagerudu' - terms which convey no intelligible meaning to me. From the context I take them to stand for certain duties then levied. The tax on looms is clear enough, though there is no means of discovering its amount. It must have been but a trifle, considering the total expenditure charged on all the revenues set apart by this deed. The word nell is another obsolete term, which I take to mean 'capital.' Considering

The expressions within square brackets are conjecturally supplied, while those within the semi-circular brackets are additions to render the meaning clearer.

^{*} Bidåra is a corruption of Bhattaruka, in which full form, too, the word is often found.

⁴⁰ The kings of Venat were always known to literature, Tamil and Malayalam, as Venatt-aligal "the holy feet of Vendd."

⁴¹ They were fortresses, treasuries, court-houses, parks, fairs, exhibition sheds, halls of learning and of pleasure.

¹² I regret to observe that the Travancore Coneus Report, 1891, adopts this absurd derivation. See Vol. I. pages 743 and 755.

se This applies to all subsequent inscriptions. The symbols are arbitrary contractions of words and numerals, and difficult, therefore, of conjecture.

the difficulties of the Vatteluttu Alphabet in general, and the fauthers of this me ript on in particular, I have reason to be gratified that it has only served to attest at least 70-70 a Retainvarman's rule in 1144 A. D. and the re-establishment of his authority in Telegand.

III.

Seventeen years later we get a glimpse of another sovereign of V2phi. On Saturday, the 7th Idavam 336 M. E., the throne of V2phi was occupied by Sri-Vira-Ravivarma Tiruvadi. The authority for this statement is an inscription in old Tamil, in four long tires on the southern wall of an old temple, in another deserted village near Olugunscheri, new called Puravacheri, a name as much fallen from its original proud designation of Puravari-chatur-vêdimangalam, as the village itself from its former pristine glory. For the heacht of such as may wish to verify this document, I must note that the priest in charge of this temple is an inveterate heavily-worked pluralist, and his movements are more invalculable than most mundane phenomena, so that one ought to go prepared to stay at Olugunacheri for a week to catch a glimpse of this servant of many gods and to be admitted into the courtyard of the pagoda. Yet if you believe the priest (and it would be profane not to do se), the pajds are most regularly performed: only, if you go there in the day time, they are going to be performed at night, and if you go there at night, they will have been finished during day. The inscription would run thus in English;—

No. $\frac{3}{29}$ Old Tamil Puravacheri Inscription of Vira-Ravivarman.

"Hail! Prosperity! In the year opposite the year 336, after the appearance of Kullam, with the sun six days old in the sign of Taurus (i. c., the 7th Idavam). Saturday. Makayiram star.46 was the following deed in cadjan passed :- The loyal chieftains of Sri-Vira-Iravivarma Tiruvadi, graciously ruling over Vênâd, declare that with the object of providing for the daily offerings to the Alvar in (the temple of) Puravaravu, in Puravari-chaturvedimangalam, and for a perpetual lamp to the same deity, are granted under tiruvidaiyáffum tenure, to last as long as the moon and the stars endure, the following paddy lands, irrigated by the Charar channel of Tâlakkudi, and by the waters of Cheyyanêri tank in Charavayal, viz., Unnandittai, measuring 1 + 1 + 1 + 1 and Puduvûr Mûlai measuring 10, making a total of 18+11 lands, the dues on which at the rates of assessment obtaining in the village amounting to mattal 7 * . the servants of this Alvar, shall lease out, levy, and cause to be measured at the door of the pandare's (granary), as per temple measure called puravariyin, and conduct the above said expenses without failure. The four boundaries of the lands, thus set apart, are ordered to be marked off by demarcation stones bearing the emblem of the holy discus, and in order that the allowances might continue without let or hindrance, this deed itself is commanded to be inscribed on stone and copper, in witness whereof are our signatures: Pullalan Aiyan (signature). Chingan Rangan (signature). Narayanan Sankaran (aignature). Kadai Dévan (signature), and sign manual."

This proves that Sri-Vira-Ravivarman was on the throne of Travancore on the 7th Idavam 336 M. E., or about the end of May 1161 A. D. It being but seventeen years since we saw Bri-Vira-Kêralavarman, recovering possession of Tengania, we may rightly presume that Sri-Vira-Ravivarman was his immediate successor. Pullilan Aiyan and others who signed this document were probably the fendal chieftains who conducted the administration of the day. Talakkudi being in the very confines of the present eastern boundary of Travancore, we may take this grant as evidencing the extension of the Vêrid sovereignty all over the south. It is noteworthy

is Makayiram is Malayalam for Mrigastroham, a was about the hand of Orion. It means here the lanar mansion on the day.

⁴⁴ Aiyan is here no title, but the name of the person himself.

that the measurement of the lands given is in the style⁴⁷ still followed in the Tanjore district. There was, further, about this time, no standard of measures and weights anywhere in Southern Light, each temple using its own under the name of the local deity. There are two revenue terms in this record, the significance of which I have not succeeded in finding out. These are tiruvidaiyattum⁴³ tenure and mattal.

TV.

On the western wall of the same temple at Puravari occurs another inscription in eight long lines relating to this identical grant; but a stone in the middle of the inscribed portion of the wall has been removed and replaced by another in the course of subsequent repairs, rendering the document thereby incomplete and enigmatic. It will be seen, therefore, that it is not altogether to be deplored that temples with historical associations do not receive frequent repairs! In the case before us, it is easy to supply the lost parts with the help of the related document which I have just discussed. With the omissions so made good, the inscription would read thus in English:—

No. 4 Old Tamil Puravari Inscription of Vîra-Ravivarman, No. 1.

"Hail! Prosperity! In the year [opposite the year 336, since the appearance of Kollam],49 with the sun * days old in Taurus, Saturday, Makayiram star, the officers in charge of Nanjinadu and the villagers of Talakkudi, assembling together, did as follows: In accordance with the royal proclamation issued by the loyal chieftains of [Sri-Vira]-Iravivarma Tiruvadi, [ruling graciously over Vênâd], to provide tiruchênidai and a sacred perpetual lamp [for the Âlvâr in Puravari], in Puravari-chaturvedimangalam, we, the people of Talakkudi, [have caused demarcation stones bearing the emblem of the holy discus] to be put up at the boundaries of the paddy lands, [named Unnandittal, measuring $\frac{1}{4} + \frac{2}{3} + \frac{1}{23} = 0$, and Puduvûr Mûlal], measuring making in all 10 + 310, and irrigated by the Charar channel of Talakkudi-Kidacheri and by the waters of Cheyyanêri tank in Charavayal, and we [have made them over] to the servants of the Alvar, so as to enable them [to levy from this day forwards the rent due from them according to the rate current in the village], subject to minor charges and deductions, for the purpose of providing, without failure, and as long as the moon and stars endure, for the daily expenses, as well as for a sacred perpetual lamp, as graciously commanded; in witness whereof, we, the people of Tâlakkudi, (hereunto affix) our signatures. Arayan Pasitângi, signature Kêralan Araiyan, signature. * * Vikraman Araigan, signature. Vêlân Kêralan alias Nanjinattu Mûvênda Vêlan, signature. I * * * of Panayûr wrote this deed, and wrote it at the bidding of the servants of the Alvar, and the people of Talai; [countersigned] * * * Kêrala Santôsha Pallavaraiyan, signature. Gôvindan Vikraman, signature. Anantan Sakrapâni. signature."

The grant declared in the previous inscription would thus appear to have been actually executed on that very day, —a fact reflecting no small credit on the administration of those ancient times. This document confirms the inference already drawn with respect to the extent of the Vênâd principality on that day, since the executive officers who complete the transaction are styled 'officers in charge of the affairs of the Nânjinâd,' — Nânjinâdō being the collective designation for the two southernmost tâluks of Travancore. The Chôla power then must have been by this time altogether extinct there; and it is quite possible that the Vaishṇava

⁴⁷ Vide Inscriptions Nos. 4 and 5 in Vol. II. Part I. of South-Indian Inscriptions, for samples of this system of land measurement.

At The word might be analysed into tirs + vidai + al + tu + am, and might then mean "the holy rule of the ball," i. s., Siva's emblem, and hence perhaps 'tax free or temple tenure.'

^{*} The parts within square brackets are those supplied.

w It is indifferently spelt now Nanianad and Nanjinad, the correct form being Nanjil-nadu meaning the land of plougus.

temple at Puravari was thus patronized to spite the foreign Saiva temple of Rajardra-Challestare. not far from it. But it is always unwise to attribute motives, and we may, therefore, he content with recording the fact that on the 7th of Idavam 336 M. E., Vira-Ravivarman ruled peacefully over all South Travancore, his affairs in Nanjinad being administered by a transportation Kêrala Santôsha Pallavaraiyan, 51 probably in command of the local forces, if we may judge from his title, and Govindan Vikraman and Anantan Sakrapani, in charge of the civil administration. His ministers of state at the capital were, as we have shready seen, the loyal chieftains, Pullâlan Aiyan, Chingan Rangan, Narayanan Sankaran, and Kôdai Dêvan. It is also worth noting, in passing, the part played by Araiyan Pasitangi and others, representing the village of Talakkudi; for it is remarkable that the people of Talakkudi had the right to crecute, and in a manner to ratify, the royal grant. The reservation as to minor charges and deductions, appearing in this inscription but absent in the former, would point to certain cesses, levied by village associations, on lands falling within their union. There is a word in this inscription which I do not quite understand, viz., tiruchénidei, though from the context it may be safely taken to signify some kind of daily offering in Vaishnava temples.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.LE., L.C.S.

(Continued from p. 231.)

Honey. - Honey is believed to have power over spirits, because honey is one of the earliest foods, yields an intoxicating drink, has many healing virtues, and prevents corruption. Old honey is a cure for cough, wind and bile. It also increases atrength and virility.27 Honey is used by the Hindus for washing their household gods.25 The Dekhan Brahman father drops honey into the mouth of his newborn child. Among higher class Hindus, especially among Brâhmans, when a child is born, hency is dropped into its mouth from a gold spoon or ring.29 Among Dekhan Hindus, when the bridegroom comes to the bride's house, honey and curds are given him to sip. This honey-sipping is called madhuputho; its apparent object is to scare evil from the bridegroom. Honey is considered by the Hindus a great cleanser and purifier. It is also the food of their gods. In Bengal, the Brihman bride has part of her body anointed with honey.22 How highly the early Hindus valued honey appears from the hymn, "Let the winds pour down honey, the rivers pour down honey, may our plants be sweet. May the night bring honey, and the dawn and the sky above the earth be full of honey."33 This intense longing is probably for honey-ale, madha, or mead. In Africa, an intoxicating drink is made from honey." The Feloops of West Africa make a strong liquor out of honey,35 and the Hottentots are fond of honey beer. Mead made from honey was the favourite drink of the Norsemen. In England, honey-suckle still keeps off witchcraft."

Horns. — The horns of certain animals are believed to scare fishes. Also horns are used as weapons both of attack and of defence, and as weapons are worshipful. Further, the horn is a light giver: classic lanterns were made of plates of horn. The hart's horn is very largely used as a medicine in Western India. In the Kohkan, it is a

^{*} Pallavaraiyan, meaning the king of the Pallavas, is an old military title. It was mometimes conferred also on mon of letters as a special mark of royal favour, a.g., on the arthor of the Portysperinaus. s Information from Mr. P. B. Joshi. ** Information from Mr. P. B. And in case to go of the speciment of the contract of the cont

common cure for bile, fainting, and headache.39 At a Hindu wedding, a horn is blown when the lacky moment comes.40 The practice of blowing horns at weddings was formerly common; at present it is going out of fashion.41 Among the Bharadas of Ahmadnagar. when a child's ears are bored, a ching or horn, made of horn or of brass, is tied round the child's neck to be blown by the child before worshipping his gods or taking his food.42 The Lingayats of Bilipar in Sravan (July-August), the great spirit month, carry a long pole wound round with a coloured cloth and surmounted by a conical globe. They call this nandi-kodu. or Nandi's horn.47 In Coorg, at a festival, at which a man used to be sacrificed, rude dances are performed, in one of which the dancers wear the horns of the spotted deer.44 Naris, a Persian. had horns on his tiara; so also had the Assyrians.45 A small horn called corniculum was worn on a Roman believt as a mark of honour.46 The Egyptian god Chnum wore ram's horns.47 The Jewish alter had horns. At each corner of the masonic alter is a horn. 48 In the Bombay Dekhan the himidpunti, i.e., from seventh to eleventh century, Hindu temple roofs have horn-like bosses on the stones, and horns adorn the top of the spire of many Mahâdêva temples. The Reman horn of plenty is still a Freemasons' symbol.49 In China (in 1321), some women wore a great spike of horn on the forehead to show they were married.50 Both among the fifth century White Huns of Central Asia, Persia, and India and among the later Huns of Asia and East Europe the women wore horns on their heads, a practice which was the origin of the fashionable highpeaked Hunische hats of fourteenth century Europe. Among the Druses of Lebanon the women wear silver horns.⁵¹ The women of one division of the wandering Vanjaras of Western India wear a high horn-like spike of wood. The Sunangs, a wild Malay tribe, greatly prize rhinoceros' horn as a cure. 52 The Dyaks of Borneo wear chips of deer horn as amulets and keep deer horns as talismans against sickness, death and defeat.⁵³ A favourite charm in West Africa is a large horn filled with mud and bark, with three small horns at its lower end. This horn is believed to keep slaves from running away.54 The people of Madagascar consider the horns of cattle a symbol of strength. All horns are supposed to have a medical power like hart's horn,55 Pinto says that, while in South-West Africa, when stricken by a strong fever, the people covered him with amulets, his chest with horns of antelopes and his right arm with bracelets of crocodile teeth.56 Rhinoceros' horn is a great antidote of poison.57 The Bongos of the White Nile make horn-like points on their roofs.58 Bracelets of horn are worn by the Msuahili women of East Africa.59 The musicians at Dahomey wear horns. Co In Central Africa, a horn is used as a bleeding cup. C1

In England (1724), it was the practice to swear on the horns at Highgate near London.62 The Italian traveller Della Valle (1623) tells of a piece of horn owned by the captain of the ship Dolphin, which was believed to be unicorn horn, because it was good against poison.65 In Eng. land, the husband of an adulteress used to be described as wearing horns.64 The phrase, which is in use in French, German, Spanish and Italian, as well as in English, is that the unfaithful wife presents her husband with horns. This is a hard saying. The horns given by the wife cannot be the horns emblematic of power; they must be the guarding horns. Apparently, what

the husband's horns are to save him from is the pointed finger of scorn. S Neapolitan ladies wear small horas as charms. If by chance the charms are not worn the first and fourth right finger pointed under a handkerchief save from the evil eye and other harms." In carly mosaics the Deity is expressed by a right hand issuing from the clouds with the first and fourth fingers pointed like horns.67 Indian goddesses have both hands with horn-pointing fingers.68 In a curiosity shop in Naples, a stag horn stands over the door. Inside are Etruscan glass beads, a ram's head to keep off the Evil Eye, a head with horned moon and a hanging horn. " In the Kircher Museum at Rome, among the collections from the early lake dwellings, are pieces of horn. 70 In Spain, horn shavings cure sickness caused by the Evil Eye." Ram's horn is the only safe keeper of snuff; also in early classic and Norse times the horn was the proper holder of liquor: all good things remained safe from evil within the keeping of the horn of plenty: guardian sounds gained a special virtue when blown through a horn. Two oxen skulls guard the lid of a Roman incense box.72 In Pompeian frescoe lxxviii. in the Naples Museum, a horn hangs from a fillet,-"for the Evil Eye," says the guide." Again, for the Evil Eye, in the streets of Naples cab horses have the forelock waxed and twisted into four or five horn-like spikes apparently the same as Homer's horn-shaped lock of hair. An ass drawing a coster's cart has an upright brass horn on its saddle.76 Wine, the beloved of spirits, and so specially, apt to be soured by evil influences, wants careful keeping. A wine shop has one horn upright over the door and a second slung across the door. A wine cart has often a hanging horn in front and almost always a horn hanging from the arle.76 So notable is the scaring power of the horn that in Naples amuless of every description are spoken of as horns.77 The house wants guarding, so near Tivoli, a sheperd's but has a horn on the rooftop; and, in Tivoli, a blue piece of iron over the tram-shed door is twisted into a horn shape." On the roof ridges of Bhils' houses in East Gujarat, horns are common to keep off evil dreams and the illomened owl.79 The crops want guarding from the blight of the Evil Eye. The bleached skulls of oxen or cows may be seen in market gardens near Bombsy, and in most patches of garden crops grown by the Bhils in the Panch Mahais. The Bombay market man will say that the skull is a bird scare : the Bhil admits that it keeps off the Evil Eye. Cakes offered at Greek altars were horned, and called moons and oxen. 81

Horns guard from evil not only the head of the injured husband. The horned human head is one of the best of guardians. Moses' rays stiffened, perhaps returned, into horas. When a Catholic Bishop is consecrated, the horned mitre is set on his head with the christianising formula that with his head armed with the horns of either Testament he may appear terrible to the gainsayers of truth. The guardian Dionyens was essentially a horned god. 53 Among western Asiatics, Alexander is the great two-horned Zulkirnain. The coin-heads of the Seleucide are horned. Weiner noticed in Peru a great horned head on the roof of a tomb. 85 Some of the Roman Medius faces are horned. Pompeian freeces ii. in the Naples Museum has a horned human head and a long horned deer's head. According to the guide,

⁶⁵ The unfortunate husband is also called the calcifold. Appearantly, this should be candicided, he who has been turned out of his nest as the hedge-sparrow is jurned out by the Cook wold or Moureock, that is, the Cackno. Mr. Histop (Two Babylons, p. 895) has a handrome bit of Bubylonian connecting the two attributes of the ill-used husband; Nimrod as universal king was kinck-hold king of the world. As made the emblant of his power was the bull's horns. Hence the origin of the cockold's horns. But the financial the fraction of the right hand venomous. Tracts, Vol. II. p. 24. The common people of North England think the financial of the right hand venomous. It is never applied to a wound or a sore. # Op. all p. Mil.

W Proper Mill, with

This face images are still worn in Naples to keep off the Evil Eye. 37 All over India the horned face, or Singh Mukh, guards the threshold, the pillars, the ceiling corners, and the roof tops of countless Jain a. i Brahmanic temples. This face has absorbed the earlier hornless Fame, or Medusa-face, known as Kirth Mukh, and the Sun face, or Sûrya Mukh. With slight alterations it remains the tentre of many a flowing band of Masalman tracery from Mahmud's tomb in Ghazn to the propers and strines of the Panjab, Gujarat and the Dekhan. Singh Mukh still looks out from his veil of leaves in the central feature of many a belt of ornament in Indian carved tables, book whard, acroes and almiras. The Christianity of Western Europe has degraded the early guardian horn face to Old Horny, the Devil. The Virgin standing on the crescent moon is said to symbolize the power of the Queen of Heaven. An earlier and ruder sense is that the crescent moon is chosen, because it is horned. The honoured Virgin wants protection. The horns, on which she stands, will scare evil influences. In a rough frescoe in an inn at Baic near Naples, one of the horns of the moon, on which the Virgin's feet rest, is curved like an oxhorn. Across the other horn, which is stiff, a snake is thrown.

Incense. — The fumes of certain gums and woods cure fainting fits and swoons. In the Kunkan, the fumes of the leaves of Raphanus satious are supposed to cure piles. 99 Another element in the belief in the demon-scaring power of incense is the Persian idea that to bad smells are evil spirits which good smells can put to flight. The origin of burning incense in raligious services seems to be fartly to please the guardian, partly to scare evil spirits from him. On the one hand the medium, or bhagat, inhales the fumes of frankincense that his familiar spirit may enter his body; on the other hand, according to Burton, spirits can be driven⁹¹ from haunted houses by a good store of lights, odours, perfumes and suffumigations, as the angel taught Tobias to use brimstone, bitumen, myrrh, and briony root. In the Kônkan when a person is believed to be possessed by a spirit, a fire is kindled. On the fire some human hair, narkyd liban or dung-resin, and a little hog dung, or horse hair, are dropped, and the head of the sufferer is held over the fumes for a few minutes. If the spirit is weak, it gets frightened and makes off. 22 The burning of incense before an idol is an essential part of Hindu worship. No Hindu worship is complete until incense is burnt and waved before the god.93 Gügal (aloes) is believed to drive away spirits. So the Gagli Brahmans of Dwarka say they get their name, because they drove away a demon by the help of alces or gugal.94 Myrrh, aloes, benzoine. camphor and sandal are all considered purifying and healing by the Hindus.95 The Santikamalakara, a Hindu religious work, states that when a child is suffering from the disease called balagraha, or child-seizure, sandal paste should be rubbed on its body, fumes of incense should be made to pass over it, and flowers, rice and a lighted lamp should be waved round its face.96 The Hindu ritual lays down that, before it is set on the pyre, the dead body should be rubbed with sandal-wood, perfumes, saffron, or aloe-wood.97 Strong fetid smells are used by Hindu doctors to cure diseases. ** Karnatak Musalmans say nothing is so great a spirit-scarer as a good smell, especially frankincense and flowers.98 Among the Malays, incense is used to counteract spells and scare spirits.100 The Chinese hold that incense When a Chinese child is sick with fever, the mother puts three burning incense sticks in its hand. A servant carries the child out of the house, and the mother follows, pretending to sweep, and calls "Begone, begone, begone."2 The Motus of New Guinea stick bunches of sweet-smelling leaves in their armlets.3 In Madagascar, gums and fragrant wood are burnt on special religious occasions.4 In Africa, when their

husbands are hunting, Hottentot women burn something like rosin, which they find or the sea shore and pray for success.5 In Roman Catholic ceremonies, the garments of the private are incensed, apparently that no evil influence may lurk among them. Among the Research Catholics, the bread and wine at Mass are incensed: the altar and the priest are in consent. and the Bible is incensed three times before the Gospel is read.9 According to Mr. Handle the daily services, lamps, and fumigations of cathedrals on the Continent make them safe. English cathedrals are unwholesome. In a Greek Church haptism incense is waved in front of the font,10 The Bulgarians hold it a sin not to fumigate flour when it comes home from the mill. II Intolerable smells drive off spirits. So, the Angel Raphael drove out the detains A smodeus by making a stench with a fish's liver.13 In England, spirits were believed to have delicate nostrils, dreading certain stinks and loving certain perfumes.14 In England (1.77). on the Twelfth Night, to guard those organs from sickness, the head of the house burned frankincense and fumed his own and his children's noses, eyes, ears, and teeth. Then the incense was carried round the house to drive off witches.15 In England (1800), coffins and to he anointed with rich odonrs.16

Indecency. - Spirits are said to be afraid of indecency, especially of the male and female organs. So in the Hölffestival, Hindas call out the names of the male and female organs. according to the Mahabhirata, to scare the mouster called Dhundharikshasi, when to ables children. Among the Dekhan Râmôsis, before the turmeric rubbing, the bridegroom is stripped naked.17 In Poona and in parts of Gujarat, at the festival of Sirál Set, on the section Srâvan, or August, lower class Hindu women dance in a circle round an image of Sirk Set, singing indecent songs. This festival is specially observed by barren women.19 The Shilliplir Mhars are buried naked, even the loin-cloth is taken off." The Linguyat boy, about to be initiated, is kept naked and fasting all the morning." On Ganpati's day, the waxing fourth of Bhidrapad (August-September), it is unlucky to see the moon. Any one who sees the mean picks a quarrel with some one, and uses bad language in order to be abused in return.21 In a shrine at Mahâkût near Badâmi in South Bijapar, a naked female figure lying on its hack is worshipped by barren women.22 In the Karnapak, naked and indecent figures are painted on idol cars and temples to keep off the Evil Eye.3 In 1623, the traveller Della Valle noticed on an idol car in Kanara the images of a man and woman in a dishonest posture.24 At the village festival of Dayamava, in the Southern Maratha Country, women used to vow, if the goddess answered their prayer, they would walk naked to her temple. Wemen still walk without clothes, but covered with a garment of sim and mangoe leaves and boughs, and excepted by other women and children.25 At the same festival to Dayamava, the Mang who carries the basket of pieces of kid and buffalo flesh, and scatters them in the fields, is naked,26 and a Mang. called Ranigia, abuses the goddess in the foulest language. Sir Walter Elliot notices that a similar outpouring of abuse formed part of the Greek Field Dionysia." In Bengal, at the

Durga festival, indecent songs are sung.28 The Vaishnava priests of South India sing obscene songs, which, the more they are stuffed with dirtiness, the more they are liked.29 In South India, the sculptures of most temples are obscene. Niches are filled with figures of men and animals in shameless positions.30 According to Pliny, the Romans of his time bad the pots they quaffed from graven with fair portraits of adulteries. It is because of its evil-scaring power that the ling is a cure for barrenness.32 The Beni-Isra'il midwife, when she draws off into salt the Evil Eye that is blasting the child, abuses the person whose sight has worked the mischief.33 The Shanar exorcist beats the possessed, and uses the most filthy language he can think of.34 In Central Asia, most of the comedian's representations are obscene, often vivid and witty, and approved by rounds of laughter.35 Before Muhammad's time Arab men and women used to worship naked at the Ka aba, 36 Two of the stones worshipped at Makka in pre-Muhammadan times.represented A'saf and Navilah, a man and woman who had committed whoredom. As the Prophet was unable to stop the worship, he allowed it to continue as a token of respect for divine justice.37 In Japan, Yo and In, the male and female principles, are placed at the doors of Buddhist temples.38 On New Zealand tombs phallic sculptures, symbolic of the via generatrix' are common.38

Among the Papuans and also among the Turkomans funeral rites are performed by naked women.40 So Alexander the Great ran naked round Achilles' tomb.41 In Tartary and in South Africa, people used to scold at the thunder and lightning to drive them away.43 In Madagascar, on the birth of a child in the royal family, the greatest licentionsness was allowed.43 The Romans, when there was a plague or a famine, acted a play in which the gallantries of Jupiter were shewn.44 The early Christians considered it lucky to meet a harlot in the morning,45 The same belief is widespread in India. The harlot is the sin-trap or scape-goat. The Turkoman horse-doctor or saint, in Bonvalot's Heart of Asia, tells the owner of the sick horse: - "You must strip yourself naked, hold the horse by the tail, and kick him on the quarters while I pray."46 Among the Red Indians. Minnehaha, at the request of her husband Hiawatha, when the noiseless night descended laid aside her garments wholly and with darkness clothed and guarded, unashamed and unaffrighted. walked securely round the corn fields, drew the sacred magic circle of her footprints round the corn fields, to protect them from destruction, blast of mildew, blight of insect, Wagemin the thief of corn fields, Paimosaid who steals the maize-ear.47 In Greece, when it has not rained for a fortnight, young girls choose one of their number, who is from eight to ten years old, usually a poor orphan, strip her naked, and deck her from head to foot with field herbs and flowers. The others lead her round the village singing a hymn, and every house-wife has to throw a pailful of water on the naked girl's head.49 In Germany, stand.

raise laughter. Luck is gained by clearing the air of spirits. To clear the air of spirits two influences must unite. each powerful over one of the two great swarms of unhoused spirits. The two influences required are, — a scaring influence to put to flight the host of man-hating irreconcilables, and a squaring influence to draw and house the army of friendlies and neutrals. This dual scaring and housing power of the male and female organs seems traceable to two experiences. First to the experience that the organs are the source of the great healer, urine, and so are a home to the squarable and a terror to the irreconcilable; and second to the experience that, as the source of being, these organs are a haunt and a fount of spirits, a home, in later phrase a symbol, of ancestral and other guardian influences, and therefore, like other guardian homes, at once a dread and a jail to man-hating wanderers. The shouts are as potent as the organs, because, from the experience that in the name dwells the spirit of the object named, it follows that to show the names of the organs has the same effect as to show the organs themselves.

ing naked, or walking backwards, was an usual requisite for finding out a laver. Another way was, being naked, to throw the shift out through the door.49 German witches bathed naked in sand or corn,50 In Germany, to bring rain, a little girl, completely undressed, was led outside of the town, and made to dig up henbane with the little finger of her right hand and tie it to the little toe of her right foot. Size was then solemnly conducted by the other maidens to the nearest river and splashed with water. 51 A carved stone, representing a liagam was found in a grave near Norfolk.12 In England, in 1268, to stay a cattle plague wood was rubbed till it burned and an image of the penis was set up to guard the cattle from disease. In fifteenth century France, cach Cathedral church had a bishop or an archbishop of fools, and in churches under the Pope a pope of fools. Mock pontiffs had crowds of mock ecclesiastics, some dressed as players and buffoons, some with monstrous masks, others with faces smutted, some dressed as loose women. In the service the crowd sang indecent songs in the choir. After the service they put filth into the censer and ran about leaping, laughing, singing, making obscene jokes, and exposing themselves in unseemly attitudes with shameless impudence. The first time he takes them out in spring, the Saxon swine-herd in Transylvania goes naked with the pigs. The herd's nakedness keeps diseases from the pigs. Similarly in Transylvania, women belping a cow to calf should wear no clother. 55 The story of Godina at Coventry appears to be a case of meaning-raising invented to make possible the continuance of the old practice of opening fairs by a naked procession. 56 African chiefs and, according to Ajanta and other cave paintings, Hindu rulers of the sixth to the tenth century, were waited on by naked women. Persons to be initiated into the classic mysteries took off their clothes on entering the inner part of the temple.⁵⁷ In England, a charm for acrofula was for a fasting virgin to lay her hand on the sore, and say: "Apollo denies that the heat of the plague can increase where a naked virgin quenches it," and spit three times.58 A part of the crowning rites of a Tahitan chief was that naked men and women danced and left excrement round him.50 The Australians hold elaborate dances in which they imitate the loves of animals. When a child is seriously ill, the Gujarat mother sometimes goes to the small-pox goddese's temple at night naked, or with nothing on but nim (Melia anadirachta) or acopálo (Polyalthea longifolia) leaves. She sometimes undresses in front of the temple and stands on her head before the goddess.61 In Middle-Age Germany, a naked maiden stopped droughts and worked many cures. 62 According to Pliny, the touch of an unclothed maiden cures boils. The same authority states that a naked woman stills a storm at sea. In the East, the belief prevails that a snake never attacks one who is naked. About 1860, a cattle plague was wasting Russia. In a village near Moscow, the women stripped themselves naked and draw a plough so as to make a furrow round the village. At the end of the circle they buried alive a cock, a cat and a dog, calling : — "Cattle plague, spare our cattle, we offer a cock, a cat, and a dog." In England (1805), valentines sent on February 14th were often indecent.

The Florence Carnival was famous for the indecency of its songs. The Carnival songs of Lorenzo de Medici shew how far the license was carried. The marriage songs of the Romans were indecent. So are those sung by the women of many Hinda castes. Compare among the Jews of the Eastern Caucasus: a week before the wedding the women sit on the roof, singing

old Tâtâr love songs. Mr. Elworthy is, no doubt, correct in explaining that the object of the lewd fe-connine or marriage songs was to avert evil influences. 70 The Egyptian women (B. C. 480). floating in boats down the Nile to the fair of the goddess at Bubastis, in passing a town, drew uear, sang, beat cymbals, cried out, lifted up their clothes, and loaded the townspeople with abuse.71 The women of Cevlon keep at a distance Bodrima the ghost who died in child-hed by waving brooms and abusing the demon with a string of epithets.72 In Rome, on the 15th March. at the festival of Anna Perenna, the country people had rustic sports, drinking. singing and dancing. A remarkable and unaccountable feature, says Wilson, was the use of ancient or vulgar jokes and obscene language.73 'At the Athenian stenia the womers made jests and lampoons against each other.74 The Fiji women welcome warriors back with obscene songs.75 In the Roman triumph, the soldiers shouted Io Triumphe, and sang songs with the coarsest ribaldry at the general's expense.76 The great spirit-scaring festival at Axim, on the Gold Coast, begins with seven days of the freest lampooning and abuse.77 At the great harvest festival of the Hos in North-East India, sons and daughters revile their parents in gross language, and parents their children.78

The Cruise of the Marchesa gives insight into the reason why indecent statues or pictures, especially figures in the act of sexual union, and the emblems of the union of the sexes, came to have a religious meaning and to be objects of worship. The ruined Papuan temple at Monokware, in Dorei Bay, in north-east New Guinea, had on either side, not far from the entrance, a great image of a man and woman in sexual union. Within were other carved wooden figures of much the same kind, grotesque and indecent, intended to represent the ancestors of the Nufoor tribe, and known as the Mon or First People. In a note to page 281, Dr. Guillemard states that both in New Ireland and in the north-west and north-east of New Guinea, the aim in making the Divine Nine-pins, called Kurovar, which are the chief local household gods, is to house the spirit of a dead ancestor. He says: - "The belief is that the ghost must have some habitation on earth, or it will haunt the survivors of its late family." Whatever lodges the uneasy ghost protects the family from suffering and is therefore lucky. The object of the indecent figures is the same as the object of the Divine Nine-pins, that is, to tempt ancestors into them. Indecent is a vague word. It may mean simply naked. The belief, that the private parts are specially spirit-homes, seems based on the fact that they are appetite and passion centres, affected without or against the will of those to whom they belong. The belief on this point is a case of the great early religious law, the unwilled is the spirit-caused. To the early man both the local physical and the general mental effects of the promptings of the sex appetite imply the entrance and working of some outside spirit. In later religious thought the effects are explained as due to possession by Venuses, Loves, or Nymphs. In another view, the cause is Satan warring in man's members, er the old Adam goading to sin. Since, therefore, the private parts are great spirit haunts, they can be used as spirit-housers. Therefore, the private parts are lucky. The belief, that the private parts are specially open to spirit attacks, seems to be the origin of physical decency. The private parts are kept hid, lest the evil eye or other evil spirit should through them enter the body. So to intercept any fiend-bearing glance, the naked Madras Hindu child has hung round its waist a heart or V-like vulva or yoni-shaped metal plate. Similarly, the sense of ceremonial or religious nakedness in the attendant of the king, or in the devotee, or vow-payer of the god is that their nakedness draws into themselves the evil spirits, which, unhoused, might have vexed the king or the god.

e Elworthy's The Evil Eye, p. 425. Compare Munro's Catullus, 16, quoted in Smith's Greek and Roman Antiquities, Vol. I. p. 839.

¹¹ Herodotus, Vol. II. p. 60; Wilkinson's Egyptians, 2nd Series, Vol. I. p. 279: Vol. II. p. 230. 72 Demonetogy and Witchcraft in Ccylon, Journal of the Asiatic Society of Ceylon (1867), p. 37. 73 Wilson's Works, Vol. III. p. 239. 74 Potter's Antiquities, Vol. I. p. 487.

⁷⁵ Featherman's Social History, Vol. II. p. 217.

²⁶ Smith's Roman and Greek Antiquities, Vol. II. p. 897. 78 Dalton's Descriptive Ethnology of Bengal, p. 196.

In addition to their luckiness or spirit-housing power as being simply naked, figures in the act of sexual union, or, in a later form Mahadêva's favourite home, the symbols of the united male and female organs, have faurther power to tempt spirits to lodge in them. It may be said that the attractiveness to spirits of figures in union, or of the emblems of union, is nothing more than enticing the spirit to enter into the act which had been one of its chief human pleasures. But it is doubtful if this common-sense view is the true explanation of the belief that the representation of the act of sexual union has special spirit-drawing power. Because the passion or possession that accompanies the act of union, and still more the experience that the result of the union is the framing of a new human being, the calling a soul from out the vast and striking a being into bounds, must have impressed the conviction that the moment of sexual union is the chief of spirit-housing times. The other early belief, that the spirit of a dead relative comes back into the new-born babe's body, must have still further enforced the belief that sexual union was one of the chief spirit-housing conditions. The likeness to some one dead, which later thought traces to the handing down of certain physical strains, proves to the early man that in the child lives the dead relation whom the child resembles. This seems to be the chief consideration why representations or symbols of sexual union are believed to be specially tempting ancestorlodgings, and are therefore specially lucky and worshipful.

THE STORY OF KOTI AND CHANNAYYA - (continued).

As they were going, the Ballsl sent a man to say to them:—"If you defeat in battle an elephant, a horse, and an army, too, I shall give you a mura of rice."

- "Your servants get, as a present, a ser of rice," said Kôti and Channayya.
- "Do you, heroes, fight with an elephant and with a horse, and defeat nine lákhs of men, and I will give you as a present a mura of rice. I shall send my servant to you. Be, at that time, with Little Channayya.

A man was sent to fetch the heroes from the **Édambûr Baidya's** house. They went to the Ballâl and saluted him. Five hundred elephants were loosed to fight with the heroes of Édambûr.

"If you come with justice, I will shew you a road to my heart, but if you come with injustice, I will cut you into pieces, like bees," said Channayya.

A troop of horses was brought out to them, but Channayya mounted on a horse, and killed it, by pressing it so that it vomited up its food.

"The elephant is defeated and the horse is defeated, but the nine lakhs of men remain,' said Channayya to his master.

The younger brother himself killed the nine lakes of men by his might. It was difficult even for the Ballal himself to remain alive.

- "I will give you a present, Channayya!" said the Edambûr Ballâl, and presented the heroes with land at Ekanadka.
- "We want land that has been fallow for sixty years and on which wild plants and herbs have been growing for thirty years," said the brothers, and took their leave.

The land at Ekanadka was presented to them. They went there, made a plan, and built a palace. The palace was built with five hundred rooms below, with an upper story in the

middle, and with another story over that. The land was hilly, but the hills were dug down and made into a paddy field by the heroes. On the 18th of the month Paggu, they ploughed the field with four bullocks and sowed seeds in the corner of the field.

"We have ploughed and sown in the dry land sowing sixty muras of paddy, and in the wet land sowing ninety muras of paddy," said the brothers to each other.

"Let us examine the sprouts of the seeds. Do you, elder brother, go through the dry land and I will go through the wet land," said Channayya.

When Kôti went through the wet land and Channayya through the dry, the younger brother met the elder.

"Brother Channayya! what do we see in this country? A wild hog called Gujjara was born when the earth was created. He has destroyed all the crops. He has ruined all the paddy fields producing food for fifty men," said Kôţi.

"There is no hunting and no army in this country," said Channayya.

"This is not a country where men live. This is a widow's country and a woman's country," said Kôṭi.

"We have not rubbed off yet the sweat of our limbs with the clothes tied to our middles. Our daggers rust," said Channayya.

Little Channayya told all this to the Ballal of Edambur. The Ballal sent Little Channayya to Ekanadka Guttu, to bring the heroes in a ghaligé. The heroes saw the letter and came in a ghaligé.

"I hear that you say that this is a widow's country and a married woman's country, and that, as this is a widow's and a woman's country, there is no hunting," said the Ballâl. "I will write a letter to the hunters, so that they may assemble under a small mango tree."

The Ballal wrote a letter to a thousand people of Edambur and to three hundred people of Tolabari to collect together, and proclaimed that each household was to come. Also, that every grandson, who was under the care of his grandfather, and every nephew, under the care of his uncle, was to assemble. Every elder brother and younger brother and every brother-in-law was to come to the hunt.

"Every one of these is to be present under the small mange tree for seven days and nights," said the Ballal. "Little Kinnyanna, why do not the heroes come yet? Were they not informed?"

Soon after that, when Kinnyanna went to the heroes to call them, they came over. They came to the Ballal and saluted him, standing on lower ground.

- "Are the men and the army sufficient, Kôti and Channayya?" asked the Ballâl.
- "Master, the men are sufficient for the hunting; but there are no dogs at all," said Channayya.
 - "Where are the dogs, Channayya?" asked the Ballâl.
- "On the ghais in the Upper Country there is a dealer in dogs, who is call Mallodi," said Channayya.

A letter was written to the Upper Country to bring twelve dogs without leashes, and twelve dogs with leashes — altogether twenty-four dogs. The Ballâl ordered a servant, Baggs, to carry the letter. Bagga carried the letter to Mallodi. Mallodi read the letter, in which was written the order for twenty-four dogs. Then he called to a dog "Kalu! Kalu"! and gave him food of black rice. He called out "Bollu! Bollu"! and fed another dog with white rice. He put chains on the dogs necks, and came to the small mango tree with the dogs. The Ballâl sent a man again in a ghaligé to the heroes, that they should come in a ghaligé, as the dogs

were brought. The heroes put shoes on their feet and took umbrellas, and arrived. Then the Ballal said to them:—"Kôṭi, Channayya, let us go a-hunting now!"

"In what country, in what forest and in what prickly shrubs are we to hunt?"

"Let us go to a valley, where the long-horned deer feed, or let us go to a plain where the peacocks feed, or let us go into a black forest, or let us go to the mountains, where horses grow up, or let us go to any forest you like. Let us throw stones into the forest, and send dogs into the grass," said the Ballâl.

Flying birds and running birds did not rise up. Squirrels running on trees, bats hanging on leaves of trees, and coloured deer did not get up. Cranes and other birds crying, did not get up.

"Now let us go and hunt in a forest where black musk-deer live, " said Channayya.

A large tiger, the longest in the country, got up. One Dêvanâgari Ballâl killed the tiger. Channayya killed another, which was as old as the world. When they were going to a valley, where very large tigers live, a wild hog called Panjina Gujjara, which was as old as the earth, got up quickly; and as he was coming along, grinding his teeth, as it were with the sound of thunder in the month of Karti, he ran at Kôti Baidya.

"If I run away, I shall lose my honor; but if I stand here, I shall be killed," thought Kôti himself, and killed the hog.

All men came to see the hog, which was smaller than an elephant, but greater than a horse.

Then the younger brother Channayya came to his elder brother, and called to him, "Brother, brother!" and asked him, "Did you kill a hog that is smaller than an elephant and bigger than a horse?"

"Brother, you see," said he, "we could both kill a thousand people of Panja together-with this hog!"

Then, the brothers brought a pot of water and a shoot of the sanjimana plant, and made the hog alive again and dragged it to Panja Balitimar, where a thousand people of Panja on one side and the brothers alone on the other stood up to fight a battle. While they were fighting, Channayya speared the hog and killed it. A thousand people of Panja took hold of the two hind legs of the hog, and Channayya, seeing this, tied his girdle to the hog's teeth and dragged. When they pulled only one foot, Channayya pulled seven feet, and took it to a rock called Munjolu Pade and told the people to cut up the hog. He said that a share was to be given to the village, the head and a leg to the hero who killed the hog, some curry to the neighbours, and poison to the thousand people of Panja.

- "Let us make the hog alive and draw it away to Râyanâd Forest," said Kôti.
- "We gave life to the hog, took him away, and now let us go to Ekkanadka," said the brothers.
 - "What is to be done for the sin of killing a hog?" asked the younger brother.
- "Channayya, one only need rub on oil; oil from oil-seeds; oil from a hand-mill; warm oil for the nails of the fingers; kilenne oil for the ears; ght for the head: ten or eighteen kinds of oil should be rubbed on."

A servant put oil on his left side and rubbed it on the right side. He put oil on the right side and rubbed it on the left side. But while the brothers sat having the oil rubbed on, a contemptuous letter from Panja came to Edambür: — "Send back the whole of the wild pig, and with it some curry. When you send it, you should send our share. When you send it, you should give the here who killed the hog the bead and one leg. When you give it, you should transmit the honor. When you transmit the honor, you should send the instrument

with which the hog was killed. When you send it, you should send the heroes, too, who killed the heg, tied back to back. When you send them, let the army stand up to fight. When they stand up, let the Ballal leave off male customs and let him dress as a female; let him put two account shells for his breasts; let him put on a small jacket; let him tie his hair into a knot; let him put collyrium on his eyes; let him put a sirá round his middle; let him be dressed with thowers. If he sees his feet holding a small knife, then his country is that of a female."

Thus was the letter written, and when the Ballal saw it, he wept bitterly.

There was a poor Brâhmana at the garden called Amasavanda. The Ballâl went there and called out, "Edambûr Sañkara."

- "Why did you send a man to me, O Pergade!" asked the Brahmana.
- "Tell me what your pay is for going to Ekkanadka," said the Ballal.

Pergadê wrote a letter and gave it to the Brâhmana.

"Channayya is very cruel; Channayya is hard-hearted; therefore, O Brâhmaṇa, go carefully," said the Ballâl.

The Brûhmana went, passed the compound, and stood at the opening between two posts He called out, "Kôṭi! O new hero! Channayya! O new hero!" and Channayya came out running to beat him, and gnashing his teeth.

"Let us ask him whence he comes and where he is going," said Kôți.

They asked him, and he replied: — "I am a man from Édambûr, and have brought this letter," said the Brâhmana.

"There are many who remain at Edambûr for the sake of their meals; but let us see the contents of the letter," said Kôti.

When they knew the contents of the letter, it was no time for the Édambûr Ballâl to sit quiet, for then the seven kinds of battle appeared near. "We shall bathe to take away the oil off us, and drink rice water," said they. The water was warmed for seven nights with fire.

"O Brâhmann, take rice for food, and return to Edambûr," said they, and gave him the letter for Edambûr.

The younger and elder brother bathed, and when they had dried their hair with a cloth violently, the drops of water from their heads like bees fell at Kemira's feet. They put on marks of sandal paste, and then they prepared to write a letter to their brother-in-law. It was one Elkote Bangar Kujumba Kajer at a bellu (dry land) in Uppuchekêr Bâl, to whom they sent a letter to come within a ghalige. Then they went home to their meal. They opened the lids of strong boxes. They made a pure gold key for the jewel box, a common gold key for the pure gold box, a silver key for the gold box, a wooden key for the silver box, and a key of copper for the wooden box. They opened the box and took a black silken cloth from Kavûr, and took out all their clothes, and dressed themselves. Channayya took a signet ring from a carved box, and put it on. They put jewels in their ears, and while they were putting a thick cloth on their shoulders, their brother-in-law arrived.

"Do you remain here cultivating the land thrice in a year. If we return back, we shall take back our house and property. If not, every thing belongs to you," said they to him, and went to the chavadi of Edambûr. They went to the Edambûr bidu and saluted the Ballâl. Channayya asked the Ballâl:—"Why did you write that letter?"

"Seven kinds of battles are near, Channayya!" said the Ballal. "I am a son of the Billavar caste; how can I fight?" said Channayya. "There is a sword in your stone-box. If I can wield it, I will fight the battle. Give me an iron chain from your swinging cot, to see if I can cut it with my dagger.

"Can iron cut iron in two, Channayya?" asked the Ballal.

"If iron cannot cut iron, how can it be possible for a man to kill another, and how can a battle be fought?" said Channayya.

"When shall I see your face again, and when will you see my face again, brother?" asked Channayya.

Channayya Baidya went to battle at Panja. Koti Baidya went to battle at Nekilajyya. Channayya killed thousand people of Panja and had a gold post carried from Panja to Edambûr. He did not leave even a single man to answer a call, and he did not leave even the sprouts of plants, but destroyed every thing. He dug up the steps with a pickaxe and burnt the house with fire. He made the house red and then black, and then said that he would go to his elder brother. When he went to his brother Kôṭi, he had gathered the seven battles into one, had defeated all in six battles, and was fighting the seventh. He made a sign with his cloth so as to turn his younger brother back, as there was an arrow shot by Sanda Giḍḍi.

"Has the arrow struck your eyes or legs?" asked Channayya.

Immediately an arrow came and struck Channayya's leg.

"If he was a good dog, he would have bitten in front, but as he is a dog of Panja, he has bitten from behind. Therefore, I cannot see the arrow and take it out," said Channayya, and shook his leg with force.

Then the arrow struck Sanda Giddi. Channayya was carried to Edambûr.

Kôṭi Baidya fought the battles and defeated all his enemies. He came to a white saroli tree and sat down under it. Then he was not himself. The black bird, kalinga, sat on his hat. In the meantime one Kalôri of Pañja, who had fled from the battle, came to Kôṭi and seized his dagger, and when Kôṭi Baidya opened his eyes and saw him.

"This is not my dagger, but belongs to Brâhmana of Kemmulaje. It is not necessary to steal it from my hands. I will give you it myself," said Kôţi.

When the Ballal of Edambar heard that one Kalu Naika had gone away with Kôti's dagger, the Ballal sent his nephew Dêvanajiri Ballal to Kôti. When Dêvanajiri Ballal arrived, Kalu Naika was going away with the dagger, but he caught Kalu Naika and tied him to a horse's feet and made the horse run away. Then Kalu's face and nose were broken, and he died.

Dêvanajiri went back to Kôți Baidya. Kôți Baidya then said to the Ballâl, "Brahmâ has ordered me to go to him. I leave this life, and therefore I give you a grant on copper."

Kôti Baidya wrote a document that Edambûr is for the elder brother, and Pauja for the younger brother, and gave it to Dêvanajiri.

"I leave my body and go to Kailâsa; therefore get holy tulasî, and pour water into my mouth. Under a white saroli tree at Hasalajya Bâil in Beltangâḍi Kôti left his body and went to Kailâsa. And when he died and entered Vaikuṇṭha, Brahmâ ordered him not to touch the wall of the temple and not to descend into the yard.

"As you are the god who knows the particulars of all Sastrams, why did you make me die?" asked Kôti.

"There is only one death and one burial ground both for you and your brother; therefore, bring your younger brother, too," said Brahma.

When Kôti came to Channayya, as a spirit, his leg was being washed. Kôti called out, "O, my younger brother!" and then the younger brother Channayya struck himself on the head, and died, and went to his brother. Then they went together to Brahmâ. Then

Erahma ordered them to touch the wall and to come into the yard, and to walk three times round the temple, and then they entered the temple of Brahma. Fuel was collected in a burial ground, for which a mange tree on the other side of the river and a jack tree on another side of the river were cut down. Sixty bundles of sandal were brought. Then the dead bodies were burnt. In this manner the Bailal caused their dead bodies to be burned perfectly.

(To be continued.)

FOLKTALES IN HINDUSTAN.

BY W. CROOKE, C. S.

No. 11. - The Tale of Panchphila Rani.1

THERE was ence a Raja, who had seven sons. One day he was asleep on the upper storey of his palace, and he dreamed a dream. He thought he was in a lordly garden. The walls were of gold, and in the centre was a bower made of gold and silver. The doors were as the doors of Vaikuntha, and in the garden were all the fruits and flowers which are found in the garden of Raja Indra. In fact it was the garden of Raja Indra, which the Raja saw in his dream. In the morning, when the Raja awoke, he called all the noted craftsmen and gardeners of his kingdom, and ordered them to prepare a garden, such as he had seen in his dream, in a single day. Such was the wealth and magnificence of the Raja that the garden was made, as he desired.

One night it so happened that Lal Part (the Red Fairy), Pukhraj Pari (the Topaz Fairy), and Sabz Pari (the Green Fairy) came down on their flying couch to observe the world of men; and when they saw the garden of the Raja they believed that it was the garden of Raja Indra. So they dismounted and walked about the garden and were surprised at its beauty. They expected to find Raja Indra and their sister fairies there; but when they searched for them in vain they knew that it was an earthly garden and not that of their lord. So they flew back to Raja Indra and told him that a king on earth had made a garden surpassing his. Then Raja Indra was wroth exceedingly, and calling his two demons, Siyah Deo (the Black Demon) and Safed Dec (the White Demon), he ordered them to fly down and see which Raja had brought him to dishonour. When Raja Indra heard the tale of the garden he was evercome with anger, and ordered his four demons Lal Dec, Siyah Dec, Sabs Dec, and Safed Dec to destroy the garden by devouring the flowers and fruit trees. That night the demons came and ate several trees in the garden. Next morning, when the gardener saw the havoc they had made, he reported to the Râjâ, and the Râjâ himself inspected the place. He was very wroth, and calling his Darbâr, he proclaimed that he would give half his kingdom and wealth to the man who would detect the ruffians that had injured his garden. On this his seven sons came forward and asked that they might first of all be allowed to undertake the duty, and to this the Raja agreed.

Accordingly on the first night the eldest prince kept watch, but he fell asleep, and the demons came and ravaged the garden as before. So in turn all the other princes, except the youngest, tried and failed.

Then came the turn of the youngest prince, and he was so determined not to go to sleep that he cut his little finger and put salt into the wound. Then he climbed a tree and never slept. At midnight the demon, whose turn it was to ravage the garden at that time, came, and it was safed Dec. He appeared like a thunder cloud, and when he came into the garden he took the shape of a horse and began to destroy the trees, but before he could do any harm the prince jumped on his back and began to beat him so that the demon fell down and begged for mercy.

² Told by Wali Muhammad Kasgar, and recorded by Sayyid Nawib 'Ali, teacher of the Muhammadganj School, Bahrachi District.

Then he told the prince who he was and why he had come to injure the garden. He said to the prince:—

"Pluck a hair out of my tail, and, whenever you want me, you have only to burn the hair and I will attend to do your bidding. I am one of four demons, one black, one red, one white, and one green. They are called Siyah Deo, Lal Deo, Safêd Deo, and Sabz Deo. If you can bring them under subjection, as you have me, you will attain your object."

In the same way the prince, during the course of the night, subdued the other three demons. In the morning, he went back to the palace, and as he had been awake all night, he lay down and fell asleep. In the morning, when the Râjâ went to his garden and found it safe from injury, he was delighted and searched for the youngest prince. When he found him, he held the royal umbrella over his head, and treated him with the utmost respect and brought him home. He was about to put him on the throne in his stead; but his six brothers began to repeat the saying—"There is no such friend as a brother and no such enemy as a brother (bhái aisá hit, na bhái aisá muddai), and they determined not to stay at home and allow their youngest brother to rule over them. So they left the kingdom and went to the land of China, where the Princess Pańchphula Rani dwelt.

When his brothers left the Court, the youngest prince made enquiries about them, and, learning that they had gone to the land of China, he got a miserable, broken-down horse and saddle of rags, and putting some gold coins inside it, took the road to China, whither his brothers had gone. He passed through many forests and deserts, and at last reached the city of Panch-phûlâ Rânî. He went to the inn, where he found his brethren, and when they saw him, they were angry.

"Is it not enough that you have taken the kingdom from us, that you must pursue us here also?"

But he offered to serve them, and they allowed him to join their company. When any one used to ask them who the youth was, they answered that he was their slave.

One day Bani Panchphula made proclamation that whoever could jump his horse on the topmost roof of her palace should win her hand. But he must strike her with a ball and do this five times. Now the Rani was of surpassing beauty, and princes from the whole world were collected to contend for her. Many attempted the task but they all failed.

The young prince, who had been left behind at the inn, at last bribed the old woman with whom they lived to keep his secret, and he went to a tank and bathed and put on clean clothes; then he burnt a black hair and lo! a heavenly steed, black as the night, stood before him, and with him came a suit of black armour such as human eye never saw. He rode up among the princes, and when he spurred his steed it took him with one bound on the topmost roof of th palace. He struck the Râṇi with the ball, and then jumped down and rode away so quickly that no one was able to recognise him. The Râṇi got only one glimpse of him, but at this, she fell in love. When he got back to the tank, he put off his armour, and sent away the horse, and putting on his rags went back to the inn and no one knew him.

Next day he burnt a white hair and a white horse and armour came at his bidding. He road up and leaped as before to the topmost roof of the palace, and no one knew who he was. So did he in all five times, and on the last day the Rânt was determined to recognise him: so, as he threw the ball at her, she marked him on the wrist with a heated pice. That day he was buying food at a Baniyâ's shop in the bāzār when one of the Rânt's sepoys saw the mark on his wrist and carried him off to the palace.

The Rant wished to marry him at once; but he objected, and said that he was only a slave. He was, however, obliged to marry her, but he pretended to be a madman. Her father the

Raja tried to dissuade her from marrying a madman; but her love was fixed on him alone, and the would not heed their words.

One day the old Råjå, her father, was seized with a sore disease, and the physicians said that nothing would save him except the flesh of the simurgh. His other sons went in earch of it, but they all failed. Then Panchphulâ Rånî exhorted her husband to undertake the caest. But he said:—

"What can a madman like me do?"

At last, when she forced him, he asked for a horse and, as all of them wished that the madman who had married the Rânt should die, they gave him the most vicious horse in the royal stables. But he overmastered it and rode outside the city. There he halted and burnt a black hair, and the Black Demon in the form of a black horse of heavenly beauty appeared. On this he rode over mountain and forest to the land where the simurgh abounds, and caught many of them and rode back. On the way he felt thirsty and looking round, saw a house in the midst of the forest, in which water and all kinds of food were prepared. He went in and roasting a simurgh are and lay down. His brethren came there, and he knew them, but they did not recognise him. They asked him for one simurgh, and he gave it to them on condition that they would allow him to brand each of them on the back. This he did and let them go. He came home and told his wife and the Râjâ that he had failed to find the simurgh. Meanwhile his brethren arrived with the bird and the Râjâ was fed on the flesh and recovered. The Râjâ was pleased with them, and gave them half his kingdom.

After some time an enemy of the Raja attacked his dominions, and the brothers of his wife went out to fight, but they were defeated. The Rana Panchphula was looking on from the roof of the palace, and when she saw the army of her father defeated, she called her husband to their aid. At first he said:—

"What can a madman like me do?"

But at last he burnt a hair and a heavenly steed and armour appeared. He rode to the fight and mowed down the foe, as a husbandman mows down the standing corn. The Rājā knew not whether it was an angel or a demon that fought on his side. When the enemy was routed, the brothers of the Rājā knew well that this was but idle boasting. So he had search made for the hero of the battle. Finally, Rāņī Paūchphūlā told her father that it was her mad husband who had saved him in the hour of need. When the prince was called before the darbār, he asked the Rāja to see if his brethren were branded or not. When they had to shew the marks, the prince told how he had captured the simurgh, and the brethren were overcome with shame and were driven out of the kingdom.

Then the prince went home in splendour and found his father blind from lamenting the loss of his son. When he saw him, his sight was restored to him, and the prince and Panch-phûlâ Râuî lived for many years in the utmost happiness.

Notes.

This tale, as usual, is made up of a collection of tolerably familiar incidents. We have the cycle of the youngest best (Grimm, Household Tales, Vol. I. p. 364: and other references collected by Jacobs, Report, Folklore Congress, p. 98). Next comes the swayamvara where the princess allots tasks to her suitors. It then branches off into the search for the Simurgh, the Rukh of the Arabian Nights, about whose size the narrator has only the very vaguest notion. The hair-burning charm is found in the Arabian Nights. The Ifritah says:—"When as thou wouldest see me, burn a couple of these hairs and I will be with thee forthright, even though I be beyond Caucasus Mountain." (Lady Burton's edition, Vol. I. p. 163.)²

MISCELLANEA.

SOURCE OF SANSKRIT WORDS IN BURMESE.

SEPTEMBER, 1895.]

THE following extracts from Dr. Führer's Annual Progress Report of the Archæological Survey Circle, North-Western Provinces and Oudh, for the year ending 30th June 1894, will interest those readers who have followed the controversy between Messrs. Taw Sein-Ko and Houghton on Sanskrit words in Burma, Vols. XXII. and XXIII. of this Journal.

Dr. Führer and Mr. Oertel were deputed to Burma in 1893-94 to make an Archæological Tour, which has resulted in a most valuable Report, and, as the Report is a good one on its own account, it is to be regretted that the indebtedness of the authors to the writer of this note is newhere acknowledged, and that no mention is made in it of the great debt due by them to Mr. Taw Sein-Ko-

Extracts.

Page 15. - "The most important discoveries as yet made at Pagan are two long Sanskrit inscriptions on two red sandstone slabs, now lying in the court-yard of the ancient Kuzeit [Kuzêk] Pagoda. The oldest one is dated in Guptasamvat 163, or A. D. 481, recording the erection of a temple of Sugata by Rudrasêna, the ruler of Arimaddanapura. The second record is written in characters of the North-Indian alphabet and dated in Sakasamvat 532, or A. D. 610. Its object is to record the presentation of a statue of Sakyamuni by two Sakya mendicants, named Bôdhivarman and Dharmadâsa, natives of Hastinâpura on the Erâvatî (the modern Tagaung in Upper Burma), to the Asôkarâma at Arimaddanapura, during the reign of king Adityasêna. Undoubted proof is here afforded that Northern Buddhism reached Upper Burma from the Ganges, when India was mainly Buddhistic."

Page 19b. — "The discovery amongst the ruins of Tagaung of terracetta tablets, bearing Sanskrit legends in Gupta characters and of large stone slab with a Sanskrit record in the Gupta Alphabet of Samvat 108, or A. D.

416. affords a welcome corroboration to the statement of the native historians that, long before Andrat'a's conquest of Daton in the eleventh century A. D., successive waves of emigration from Gangetic India had passed through Manipur to the upper valley of the Irrawaddy, and that these emigrants brought with them letters, religion, and other elements of civilization. The inscription is one of Maharaiddhirâja Jayapâla of Hastinâpura in Brahmadêsa on the Eravati, and the object of it is to record in [Gupta] Samvat 108 the grant of an allotment of land and a sum of money to the drayasanaha, or the community of the faithful, at the great vihdra, or Buddhist convent, of Mahakasvapa, for the purpose of feeding bhikshus, or mendicants, and maintaining lamps at the stupe in the neighbourhood. The chief interest attaching to this inscription consists in its mentioning five linea! descendants of the Lunar Dynasty (Chandravames) of new Hastinapura, viz., Gôpala, Chandrapala, Dêvapâla, Bhîmapâla, and Jayapâla, and its mentioning that Gopala left his original home. Hastinapura on the Ganges, and, after various successful wars with the Mlechchhas, founded new Hastinapura on the Irrawaddy. The vast ruins of Buddhistic Hastinapura are now buried in dense jungle, and would, no doubt, on excavation reveal the remains of buildings raised by Indian architects and embellished by Indian sculptors. Undoubtedly valuable inscriptions would be unearthed, which might throw new light upon many dark points in the earliest history of India and Burma, and upon a eivilization that appeared when New Pagan was founded, but then steadily declined. There are a few solid circular brick pagodas to the south, east, and west of ancient Tagaung, viz., the Shwêzîgôn, Shwêzatî, and Paungdokya, which are held in great reverence, and which no doubt are very ancient. They were repaired during the reign of Alaungp'aya, as recorded on three marble debs ''

R. C. TEMPLE.

BOOK-NOTICE.

THE KATHAKOÇA OR TREASURY OF STORIES, translated from Sanskrit Manuscripts by C. H. TAWNEY, M.A., with Appendix containing Notes by Professor Ernst LEUMANN. [Oriental Translation Fund, New Series, Vol. II.]

THERE are a good many Modern Collections of Jain Tales. One of the few anonymous ones among them is the above Kathakosa. It is unnecessary to state that the translator has done his task well. Any one, who has looked into the two stately volumes of the same scholar's famous Translation of the Kathdsaritsagara, will know what he is to expect in the present volume. The references to other Folklore texts are, however, not quite as numerous as in the former work, owing to the heavy duties which his present office has laid on Mr. Tawney, while he carried through Press this new translation. His Preface, this time, gives a

short account of Jainism, in order to render the tales perfectly intelligible to those who are not acquainted with the tenets of that religion. The Notes by the writer add some more details of that kind, and trace a good many stories in the older Jain literature. The volume terminates by two indexes (an 'Index of Names' and a 'General Index') by Mr. F. F. Arbuthnot.

The Composition of Mr. Tawney's Kathákôśa is a usual one. The Jain Kathákôśas or Katháprabandhas are either written in Sanskrit ślókas throughout, or they consist of prose interspersed with some verses which generally are gáthás in Jain Prükrit or Sanskrit ślókas. The present collection is of the latter type, and Mr. Tawney has very nicely distinguished the metrical parts from the rest by using different type.

As to the Number of Tales there is some incongruity between the translator's own list (preceding his preface) and the list drawn from the Sanskrit College MS. (appended on pages 231 and 232) The latter has twenty-seven stories only, while Mr. Tawney's numbering goes up to forty-one. The difference results chiefly from Mr. Tawney's counting separately not only the independent stories, but also those which form parts of others. As the arrangement is somewhat confused by this method, I shall not adopt it in presenting below my own verified list drawn from extracts from MS. L. 94. For easy reference, however, I add in square brackets those figures of Mr. Tawney which differ from mine.

List of Tales contained in the Kathakosa.

1 and 2. — Two stories illustrating worship (phja).

3, 4, 5 [40], 6 [5-7], 7 [8]. — Tales warning against the four passions (kaskdyas), the first passion (kipa, 'wrath') being treated in two tales (3 and 4), the others in one each. Of the fifth story [40] which refers to 'pride,' only the beginning is given in the text, but the whole is supplied by some MSS. in an Appendix. 'Cheating' which is illustrated by the sixth story [5-7] is also regarded as a passion, while love and hate are not among the kaskdyas.

8 [9]. — A tale concerning a word spoken in season.

9 [10]. — A tale illustrating woman's virtue.

10-12 [11-14]. — Stories about asceticism. Also bhdvaud, illustrated in 12 [14], is asceticism (not meditation).

13-16 [15-18].—Tales illustrating four kinds of worship mentioned in the Phidjayamalas of the Digambaras. This shows that the text, though it is on the whole of a Svétámbara character, bears

also some Digambara features. The second Appendix [41] even takes in a Brahmanic tale (about Nals and Damayanti), which is not found in any other Jain collection. So the book is pervaded by Světâmbara eelecticism.

17 [19-21] and 18 [22]. — Two stories having reference to liberality.

19 [23 and 24]. — A tale reminding of the respect due to the Jinas and to the Congregation.

20 [25-27]. — A second story illustrating woman's virtue.

21 [28] and 25 [36]. — Two tales concerning the first great vow proclaimed by all Indian religions, vis., compassion with living creatures.

22 [29-31]. — A story on the Namaskâra formula (nama arahantdnam, etc.)

23 [32 and 33]. — A story on passion in genera (kashdya).

24 [34 and 35]. — A third tale relating to liberality.

26 [37 and 38]. — A tale on an offence against a teacher.

27 [39]. — A fourth story about liberality. First Appendix: 5 [40]. — See above.

Second Appendix: 28 [41]. — The story of Nala and Damayanti. Its composition differs in several ways from the rest of the book, as the reader will learn from the end of p. 242.

About half the tales are derivable from older sources and invite comparison with other recensions.

The references given in the Notes may be augmented by one concerning the seventh story [8] which is drawn from the commentaries on Uttarâdhyayana VIII. We find there the name Kapila instead of Vasudêva. This is one of the many instances that shew that's many of the names are the compiler's invention. Indeed, ever since Dêvêndra and Hêmachandra it has been customary to invent names at large, while repeating the old stories. For general research it is, therefore, not advisable to fashion, as Mr. Tawney has done, the titles of the tales after the chief names contained therein, unless these are proved to be faithfully adopted from the original sources. Of course, Mr. Tawney is fully excused as a pioneer; but future translators and editors of tale-collections will perhaps accept the advice not to overrate the names. It is true that they will have to preserve in Titles the traditional names, but they should characterise those tales which have no traditional names so as to point out their general tendency only.

ERNST LEUMANK.

SOME EARLY SOVEREIGNS OF TRAVANCORE.

BY P. SUNDARAM PILLAI, M. A.

(Continued from p. 259.)

V

N the southern wall of the same temple, and not far from the inscription No. III. containing the royal grant of Unnandittai and other lands, is found a small document, in four short lines, recording another royal grant on the 8th of Chingam 342 M.E. It purports also to be issued under sign manual, though it does not mention the name of the sovereign, which, however, we would be justified in assuming to be the same as in the two preceding records, until contradicted by other evidence. It may be thus rendered into English:—

No. $\frac{5}{43}$. Old Tamil Current. Puravari Inscription of (?) Vira-Ravivarman, No. 2.

"Hail! Prosperity! In the year 342 after the appearance of Kollam, with the sun 7 days old in Leo (i. e., the 8th of Chingam), was passed the following deed in cadjan:—The land granted under command to feed two wayworn Brahmana passengers, measures $\frac{1}{2}$ in * * * Nîlakandan-parru, and is irrigated by the river Kôttâru and the Kaichchirai channel. Nârâyanan Kunzappôlan, signature. Kâli Kunrappôlan, signature. And sign manual."

The brevity of this document would lead us to suppose that it was a sort of note, ssued under royal signature, and transmitted by two of the private secretaries in the palace to the ministers of state, with a view to having the usual more formal proclamation prepared and submitted. Anyhow, it may be taken to prove that Srî-Vîra-Ravivarman continued to rule Vênâd till at least the 8th day of Chingam 342 M. E., or about the end of August 1166.

VI.

Vîra-Ravivarman, however, could not have occupied the throne of Vênâd long after that date: for we have evidence to shew that, on the 10th Mina 348 M. E., it was occupied by another sovereign, Sri-Vîra-Udaiyamartandavarman. This evidence is obtained from an inscription in Vatteluttu at Tiruvattar, as it is now called, about five miles to the east of Kulitturai, which is itself half way between Trivandram and Oluganacheri. In this inscription the place is named Tirnvâţţâru, and the old Vaishnava Tamil hymns, Tiruvâymoli, agree with our record in that spelling. But the Sanskrit Sthale-Purage, in manuscript, with which this place is honoured, prefers obviously to follow its modern corrupt designation, and calls it Chakratirths, by way of translation. There could of course be not the least objection to the Sthala-Purana using the modern name; but then it must surrender its insolent pretensions to antiquity. The work claims to be an integral portion of the Padmapurana, and purports to report verbatim, in a series of ungrammatical slokas, a discourse of Siva, on Mount Kailâsa, extolling to his spouse the unequalled sanctity of Tiruvattar, based mainly on the ground of certain dubious tactics practised by the local deity on two supra-mundane monsters.63 On things earthly, and still more on local matters of any historical import, the legend preserves absolute silence. Its writer, however, must have been evidently struck by the similarity of the temples and idols at Tiruvațțâr and Trivandram, as well as the identity of the dates of their principal feasts, since now and again he makes Siva compliment the former by calling it Advanandapura, or the original Trivandram. It is on the southern

⁵² Vettarren-adi vanangi me-ülka-ppirapp-aruppen; similarly in all the 11 stancas of the 9th paths in the pathinguity of Namualyar.

st These monsters are called Késan and Kési. Késan is hilled and Kési his sister, some in the form of a stream to avenge the slaughter. The whole looks like an old Bravidian river myth, modified and adapted to suit the character of the local deity.

wall of the main sanctuary at Tiruvattar that the document I am now about to translate is to be found.

 $\begin{tabular}{ll} \hline \textbf{Mo.} & \frac{6}{10} & \hline \textbf{Vattelattu} \\ \hline \textbf{Old Malayalam}. & \hline \textbf{Tiruvattar Inscription of Vira-Udaiyamartandavarman.} \\ \hline \end{tabular}$

"Hail! Prosperity! In the Kollam year 348, with Jupiter in Cancer, and the sun * * days old in Pisces (i. c., in the Malabar month Mîna), Thursday, Anusham star, Srî-Vîra-Udaiyamārtāṭṭatāvarma-Tiruvaḍi graciously reigning at Köliḍaikkūru in Vēṇâḍ, brought to Kilachchāri palace, in Kōdainalhīr, in the form of nāli, 3 śalāgai and 30 alaga chchu, due on (or to be advanced on the security of) the lands belonging to Adichchan Udaiyannan and brothers, vis., Cheriyakarai Kūṭṭiya Perai measuring * * , Māttarai measuring * *, making in both * * *, in order that the fixed and regular allowances of Pallikoṇḍass Perumāļ at Tiruvāṭṭāru, amounting to rice * * [might be continued without failure]; the income per harvest being * * *."

This is one of the Vatteluttu inscriptions I have, of which I cannot satisfy myself that I have found the full import. The only finite verb I can find in it is konduvannu, meaning "brought," occurring nearly at the very end of the document; but owing to the omissions and difficulties in the previous parts of the sentence, I cannot be sure that its nominative is Udaivamartandavarman. The obsolete word néli, already met with in inscription No. II., may be taken here also to mean 'capital,' or a sum of money. Both from the context and from the numerals following the terms, salagei and alagachchu must refer to the currency then in use. Nalugai usually means a metallic rod of silver or gold. According to the Tamil Nighants, it might mean also a superior kind of gem. All the three ideas, however, are closely related to one another and to money. It is quite possible that bars of silver or gold passed in those days as currency, with or without the Government stamp. Achchu of course, as in inscription No. II, cannot but mean coin, the addition of alagu (fair) being but expletive, as in alsoivs attiopérâlei meaning the "fair title-deed." But I see no means of determining the value of salagai and acacha either in themselves or in relation to one another. All that we can safely conjecture, is that a considerable sum of money was taken to the Kilachchêri palace. Why it was taken to that place, when it was evidently meant to be utilized for the temple at Tiruvattar, is an embarrassing question, to which I can find no answer. It is equally difficult to understand how so large an amount came to be due from the lands owned by Adichchan Udaiyannan and his brothers. Since the last indistinct words of the document seem to indicate the quantity of paddy due every harvest, it is quite possible that the amount, instead of being taken from them, was only advanced to Udaiyannan and his brothers on the security of their lands, and on the understanding that a stated quantity of paddy would be delivered every harvest in return therefor. Hence the alternative construction given in the translation above. On the whole, therefore, this document must be noted as one yet demanding attention and study.

Nevertheless, for the main purpose in this connexion, it is as good a record as any yet noted; for it affords indubitable evidence of the reign of Srr-Vira-Udaiyamartanda-varman in Mina 348 M. E., or approximately speaking in March 1173. It being but six years since Bavivarman instituted the second grant at Puravari, there can be no legitimate doubt as to Udaiyamartandavarman being his immediate successor. The document gives further the valuable information that Kolidatkkuru was the capital of Venad — at any rate, at the date of this record. As far as I can make out, this capital of Vira-Udaiyamartanda is identical with the now insignificant village of Kulikod, near Padmanabhapuram, Kodainalkur being a well-known place thereabouts. If my identification is correct, the way in which the old name has been corrupted by usage, might throw light upon the original name of the modern Calicut or Kolikod. It would appear more reasonable to

Mărtăția is an obvious error for Mărtânda.

The Perumit in a reclining posture as in Trivandram, Srirangam and Seringapatam.

derive Kôlikôd from Kôlidai-Kûru, — "the suitable middle part" of Malabar, — than to trace it to the popular and elever fiction that the territory was handed over to the Zamerin, to be measured out by the distance to which the crowing of the cock could be heard. However that be, if Kôlidai-Kûru was ever "the suitable centre" of Vêṇâd, as the name indicates, we have some means of determining the original extent of that ancient principality. Taking this village, or Padmanâbhapuram, as the centre and Cape Comorin as a point in the circumference, Vêṇâd, as it originally stood, could not have embraced any territory further north of Trivandram. But the etymology of geographical names is not always a reliable guide to history.

VII.

But, whatever might have been the original extent of Vênâd, in the 4th Malabar century it did include Trivandram, its present capital. For in 365 M. E. we find Aditya Rama making a present of a drum to the temple of Krishna in Trivandram. The gift is recorded in a Sanskrit ślóka inscribed in old Malayalam characters on the northern wall of the inner shrine of the Gosala Krishna temple. With the exception of those at Mitranandapuram, this shrine appears to me to be the oldest in the Trivandram fort. In itself, it is a comparatively small building, standing in the middle of a rectangular outer temple, called the gôśálú or cowshed, and the whole is situated in rather inconvenient contact with the north-western corner of the square formed by the corridors of the grand Sri-Bali-mandapa of Sri-Padmanabha, the presiding deity of the place. Tradition, for the nonce realistic, points to a worn-out granite tub, still remaining close to the wall bearing the inscription, as a memento of the good old days when the poor folks of the village resorted to it to what their knives and hatchets before proceeding to the jungles around to fell and fetch fuel. The explanation suits very well indeed the appearance of the time-honoured tub, and also what may be otherwise inferred as to the past of the locality. It would be but an easy and pleasant exercise for historical imagination to picture, with the abundant evidences yet available, the real and original 'cowshed' and the patches of paddy lands and plantain topes by which it was then on all sides surrounded. But long before the date of this document, the primeval peace and solitade of the place must have been to a large extent broken. The Brahmana landlords of the north must have, centuries prior, planted a colony at Mitrânandapuram, as an outpost in their advance The Gôsala itself was, at the period of the inscription, a shrine worthy of a royal visit, and I feel inclined to think that the visit itself was induced by that Brâhmana colony for some political purpose or other yet further north. At any rate, I fancy, it is to some learned member of that body we owe the iloka, which to us commemorates the reign of Aditya Râma in 365 M. E. The verse may be thus translated :-

No. $\frac{7}{86}$ Archaic Malayalam⁵⁷ Sanskrit Verse, ⁵⁸ The Gosala Temple Inscription of Aditya Rama.

"Hail! Prosperity! In Dhanus (Sagittarius) and when life was at its height, Aditya Rama, who is the bearer of the state umbrella of Kêda Mûrtânda, the lord of Gêlamba, and who is further the soul of the earth, both prosperous and honoured, dedicated, after making due oblations, to the Lotus-eyed of the temple of the Cowshed, in (the town of) Syanandura, a good drum made of silver, as huge as the Mandara mountain, and as lustrous as all the foam of the oceans gathered together."

Such is the literal rendering of the rather cleverly composed Sanskrit distich. But, as Indian scholars know, cleverness in Indian versification means, to a large extent, skill in the use

57 Many letters of archaic Malayslam differ from the characters now in use, though the affinity between the two

sets is easy to discover.

This fanciful derivation illustrates how traditions are invented in Southern India. It is but typical of what uniformly takes place with respect to most names of castes, villages, and customs. [Such intentions are not, however, confined to S. India, but are exceedingly common in M. India, and are the rule in Burma.—Ed.]

⁵⁶ The metre of this verse is Sragdhari.

of tantalizing phraseology, with a view to suggest and yet to hide the thoughts to be expressed; therefore behaves us to look into the lines a little closer.

Though the word Dhanus (bow) is evidently intended to suggest that Aditva Rama was. not only the inheritor of the state umbrella of Kôda Mârtânda, but also the carrier of his bow. or perhaps his standard bearing that device of the Chêra sovereigns.50 yet, being in its locative case, it cannot but mean 'the month of Dhanus,' i. e., the month in which the sun is in the sign of Sagittarius. Similarly, the expression "when life was at its height" has its obvious astronomical interpretation. Jiva means Jupiter, and astrology assumes that that favourite planet reaches its 'height,' when it is in the sign of Cancer. 60 The use of the word Golamba again, or, as it is now more usually spelt, Kalamba, indicates that somewhere close by lies buried the wear of the inscription is the Kôlamba or Kollam era, the discovery of which, however, in old verses like the one before us, is often as difficult as a feat of astrological divination itself. A reference to Dr. Burnell's South-Indian Palwography, pages 77 to 80, would shew the extent of the resources at the disposal of the Sanskrit versifier to find convenient sepulchres for the date he might occasionally condescend to embalm in his measured lines. But in the case before us there can be no doubt that the symbolism followed is what is called the Katapayadi system of giving conventional numerical values to the letters of the alphabet; and the word whose component letters are here to be so valued, can be none else than Mártánda, — the words immediately preceding the term Kôlamba. No other term in the neighbourhood is capable of expressing a possible past date in that era. I scruple not, therefore, to conclude that the date of this document is Dhanus 365 M. E., or about the end of December 1189, when, astrologically speaking, Jupiter was in the zenith of his power in that part of the heavens which is graced by the figure of the crab.

But for the present inquiry, it is more to the point to know who was then in power here below in Travancore. "The prosperous and honoured soul of the earth" at that period, we are told, was one Aditya Râma. But with all my appreciation for the poet's feelings of loyalty, and commiseration for the common weakness to exaggerate the glory of the powers that are, I cannot but still complain that he did not somehow manage to put in 'Vêṇâḍ' instead of the whole earth. For as the lines now stand, it is not impossible for a sceptic to question whether Aditya Râma did really belong to that Vêṇâḍ dynasty whose history we are here engaged in tracing. I do not, however, for my part, feel that there can be much scope for any legitimate doubt on the point, particularly with the information placed at our disposal by the inscriptions Nos. IX. and X. in the sequel. But the poet makes amends for this defect by the mention of an important ancestor of Aditya Râma. Aditya Râma is said to have been "the bearer of the umbrella of Kôda Mârtâṇḍa, the lord of Kôlamba," which cannot but mean that he inherited from the latter his umbrella, or crown as we would now say, since one described as the 'honoured soul of the earth' could not have been the personal servant of another individual.

Who then was this Kida Martanda, "the Isa or god of Kilamba?" Kilamba is usually taken as the Sanskrit name for the Malabar era, otherwise called the Kollam year. It is sometimes assumed to have been the ancient name of the seemingly modern

To old classical times, the bow was the emblem of the Chèras, as the fish was of the Pandyas, and the tiger of the Chèlas.

This is certainly the interpretation according to current astrology, but it scarcely seems to me to be correct. Jupiter was in the sign of Cancer in \$48 according to our inscription No. 6, and, his period of revolution being roughly taken as 12 years, it is impossible that he should be again in the same sign in \$65. It is possible that astrology has changed, or that the expression 'at its height' has no special astrological meaning in this connection. On the other hand, since inscription No. 8A4 (post, page 283) assigns Jupiter to Virgo in \$68, he must have been somewhere about Cancer in \$65. But inscriptions Nos. 9 and 10 again locate Jupiter in Cancer in \$71 and \$94, and all the subsequent notices agree with them. All the references to astronomical acts in these early records requirerification. I give them in those pages as I find them

¹¹ For instance, vide page 163, Part III., Travancore Government Almanac for 1694.

seanort of Quilon, about 40 miles to the north of Trivandram. Whether the identification of Kâlamba with Quilon in Travancore be correct or incorrect, it means in the couplet before us only the era, and not any particular place, unless, of course, a play upon the word is intended. I am inclined, therefore, to interpret 'god of Kêlamba' to mean 'one who instituted or took nart in the institution of the era of Kôlamba,' or the Kollam year, in which case there would be also an obvious justification for the mention of this ancestor in particular, famous as he must have been in those early days. The traditional account of the origin of the Kollam Era, as given in Mr. Shungoonny Menon's History, lends full support to this interpretation, which, in simple fairness, I must say, struck me as the one most natural, altogether independently of that account. "In the Kali year 3926 (825 A. D.) when Udaiyamartandayarman was residing in Kollames (Quilon), he convened a council of all the learned men of Kêrala with the object of introducing a new era, and after making some astronomical rescarches and calculating the solar movements throughout the twelve signs of the Zodiac and counting scientifically the number of days occupied in this revolution in every month, it was resolved to adopt the new era from the first of Chingam of that year, the 15th August 825, as Kollam year one, and to call it the solar year."63 Whatever might be thought of this explanation of the origin of the era. there can be no doubt that tradition reckons on Udaiyamartandayarman having taken part in its institution. The change from Kôdai Mârtânda of the inscription to Udaiyamârtânda of the tradition is easy and natural, the latter being a more frequent, as well as a more significant, adjunct of Martanda, in the more favoured Sanskrit language, than the Malayalam word 'Kôda.

In justice to Mr. Shungoonny Menon, I must note also that I find in his pages a mention of Adityavarman as the sovereign of Travancore about the date of our record. "In like manner," writes this author, "the present Poonjat Rajah, who was a close relation of the Pandyan dynasty, emigrated to Travancore, and the hilf territories of Poonjar were assigned as the residence of his family during the reign of king Aditya Varma of Travancore in 364 M. E. (1189 A. D.)."64 We have only to expand Adityavarman into Aditya Râmavarman to make the name accord with our inscriptions. It would be extremely interesting indeed to prove, with the help of Mr. Shungoonny Menon's "records," on the but get hold of them, that Aditya Râmavarman, just a year previous to the date of his dedication of the drum to the temple of Gôśâlâ at Trivandram, was in a position to assign to a fugitive foreign royal family a territory so far in the north as Poonjar. However that be, we have, I believe, sufficient evidence to maintain, in the meantime, that Aditya Râmavarman ruled over Vênâd in the Malabar month of Dhanus 365 M. E., and that his ancestor, Kôda Mārtāndavarman, was the ruler of the same kingdom in the Kollam year one, i. e., about August 824.

VIII.

I will now discuss two small fragments, unworthy of attention, but for the important quarter from which they come. Next to Trivandram itself, the place now most closely associated with the ruling family is Arringal, about 22 miles to the north of Trivandram, and situated on the northern bank of the Vâmanapuram river, about four miles from its mouth in the Anjengo backwaters. The female members of the royal house are now known as the Rants of Arringal and the village and the country thereabouts are still regarded as their private property. Each Travancore sovereign has at the present day to visit the place soon after his coronation to complete the ceremonies in connection therewith, and he

e2 According to this tradition then, the era has nothing to do with the foundation or 're-foundation' of the town of Quilon, as stated in the Travancore Government Almanac, page 162, Part III. Our insuriptions, however, allude to the 'appearance' of Kollam, which I take to mean the 'institution' of the era, and not the foundation of any town. No town is known to have been founded in Malabar of such magnitude as to give rise to an era.

Shungoonny Menon's History of Tresaucors, page 88.

Possiar, or Phiniru, is on the borders of the Madura district further to the north of Permade. There is every likelihood of the old chieftain of this place having had some relation or other with Madura. His family deity to this day is the goddess Madura.

is expected further to renew the visit every year of his reign. It is difficult to believe that such attentions and honours are allowed to the spot, simply because of an accident of a palace having been constructed there, to accommodate two adopted Ranis. as stated by Mr. Shungoonny Menon. "During the 5th century M. E., and in the reign of king Aditya Varma, the Travancore royal family was under the necessity of adopting two females from the Kolathnad royal family, and a royal residence was constructed at Attingal, for the residence of the two Ranis, and they were installed as Attingal Mootha Thampuran and Elia Thampuran, i. e., Senior and Junior Banks of Attingal. The country around Attingal was assigned to them, and the revenue derived therefrom was placed at their disposal."68 Until we know for certain the nature of the authority on which this statement is based, we may scruple to accept the account, as a sufficient explanation of the anomalous relation of Arringal to the royal household. Even assuming that a particular king of Venad in the 5th century M.E. went so far out of his way as to look to Kolatnad for heirs to his own dominions, it is still, I am afraid, not very likely that the fair members so introduced into his own family would be located, in those troubled days, altogether away from South Travancore, the acknowledged seat of his own power. Antecedent probability is in favour of Arringal having been at one time an independent principality, the first of those merged later on into Vênâd. The early aggressive vigour of the kingdom of Vênâd, meeting with insuperable difficulties in the more exposed and troublesome eastern border, over which it had once extended itself, as proved by the inscriptions said to exist in Shermadevi and other villages of South Tinnevelly,67 must have next turned itself to the north, where evidently it found freer scope for exercise. The first state then to be absorbed would naturally be Arringal, supposing it was then independent. And to account for the facts, we have next only to assume that, to conciliate the newly added province, an alliance through marriage or adoption was effected with the house of Arringal, the name "Rants of Arringal" being continued, with the same object, and in the same manner as in the familiar case of the "Prince of Wales." A strong presumption is raised in favour of such an hypothesis by the fact of Kilpperur being found annexed as the house-name or the Vênâd princes in later inscriptions. Kîlppêrûr is an old and ruined village, unapproachable by cart or boat, about 8 miles to the north-east of Arringal. The country about Arringal seems to have been known in early times as Kupadesam. 68 - a province altogether distinct from Vênâd. An inscription of Rajaraja Chôla, dated in the 30th year of his reign claims for him a decisive victory over the king of the Kupakas. The Tamil poem, Kalingattu Parani, of the days of Kulôttunga-Chôla, enumerates the Kûpakas among the subject races that paid tribute to that emperer. The identification of Arringal with Kûpadêśam is rendered almost certain by an inscription in the Apanesvara temple, about 2 miles from Arringal, dated as late as 751 of the Malabar Era, which speaks of the princess who repaired that shrine, as the queen of the Kupakas. If Kupa-rajys and Venad were thus at one time two co-ordinate provinces of Malabar, and if, in later times, we find the princes of the latter appropriating to themselves, as their "house-name;" the name of a locality situated in the former, it cannot be a violent assumption to suppose that the two were originally independent principalities, and that their amalgamation took place under such circumstances as led to a compromise, the weaker party submitting to the stronger on the condition of the stronger appropriating, not only the kingdom, but also the family name of the weaker. In short, it looks not in the least unlikely that, when the power of Verad prevailed over Arringal, some matrimonial or other alliance was concluded, which naturally led the blood of Arringal to prevail, in its turn, in the veins of the Venad princes.

⁶⁶ Shangoonny Menon's History of Travancore, page 98.

Thenty of valuable inscriptions are found in several old villages of this district, which, as far as I know, have not yet seen the light of day, both literally and metaphorically!

Dr. Gundert thinks that Kupa-relys was probably indentical with Kumbalam, but notes at the same time that "either manuscripts exchange it for Mankliness, the most southern quarter." Kumbalam, as far as I am aware, is between Cookin and Alleppy. Arriagal would be the most southern quarter, excepting Venaq.

**Enliquity-Parant, Canto xi. verse 8.

below:-

But of course all this is more or less pure speculation, and must remain as such only, until it can find support in inscriptions or other indubitable facts. Unfortunately, though Arringal has within a small area more than four fair temples, testifying to its once affluent circumstances, there is in none of them any inscription referring to early historical facts. The temple that would appear to be new most closely associated with the palace, is the one called Puttankûvu or 'new grove,' dedicated to Bhagavatî. It is Bhagavatî again that is worshipped in the old local palace, under the name of Palli-arai Bhagavati, or 'the bedchamber Bhagavati.' It is rather difficult to determine whether 'the Bhagavati of the bedchamber' is really a goddess, or only a deified ancestor, say, the last of the independent queens of Arringal. To the west of the palace, and in close contiguity with the principal Vaishnava temple of the station, stands a small neat shrine, dedicated to Peru-Udaiyar,76 apparently the same deitv as is worshipped in the Rajarajesvara temple at Tanjore, but sadly unlike that model in having no inscriptions whatever. About two miles to the east of Arringal, and not far to the west of the populous Brahmana village, called Avanamcheri, n lies a petty hamlet with the historical name of Virakeralam, now corrupted into Viranam. An old neglected temple in this village owns the earliest inscriptions I can find in this locality. There are two of them in this temple, but both of them are extremely disappointing fragments. The first is inscribed on the north-eastern corner of the shrine itself, while the second is engraved on the altar outside the

No. 8A Vatteluttu 83. Viranam Inscription of (?) Vira-Kêralavarman II., No. 1.

square enclosure now in ruins. How incomplete they are will be seen from the renderings

"Hail! Prosperity! In the Kollam year 368, with Jupiter in Virgo, and the sun two days old in Taurus, Kilp" * *

No. 8B Vatteluttu
83. Varanam Inscription of (?) Vira-Kêralavarman II., No. 2.

"Sri-Dêvadâram" Kêrajavarma-Tiruvadi graciously consecrated [this shrine]."

It is of course impossible to say now whether these two broken inscriptions form parts of the same record, or even whether they relate to the same subject. But should we venture to connect them together, which of course is by no means safe, though not an unprecedented procedure in epigraphy, we should have evidence of some sort for the date of another sovereign presumably of Vênâd. I say presumably only, because it is quite possible that Kêralavarman, who founded this temple, belonged to an independent principality, say, to Arringal itself. The word Kîlppêrûr, with the first syllable of which the first fragment breaks off, is intended to refer no doubt to Kîlppêrûr-illam or house, by which the ruling family is designated in later inscriptions; but since earlier documents in my possession do not mention any such housename, it is by itself no guarantee that the reference is to the Vênâd dynasty, at least before its fusion with the Arringal or some other more northern royal house, as observed above. Only after these possible sources of error are duly provided for, can we conclude, even supposing the two fragments to relate to the same subject matter, that there reigned over Vênaq one Kêralavarma-Tiruvadi about the beginning of Idavam 368 M. E., or about the latter half of May 1193. Still, as the balance of evidence is in favour of such a presumption, we will

Peru-Udaiyar does not mean, as both people and pandits now generally suppose, the 'god of copious elething,' but the "great lord or master." Udaiyar was further the family name of Rajaraja and other Chôlas of his dynasty.

It is curious how false learning interferes with stymology. Fastidious scholars new pronounce this name Avanavancheri, and suppose it to signify 'every one's own village,' and not 'the village with a market 'as it may be so naturally and so easily taken to mean.

⁷² The word is not Dévadam, but clearly Dévadaram, though I cannot make out what it means.

provisionally call him Vîrn-Kêralavarman II., — the prefix Vîra, which occurs invariably in all the known old names of the dynasty, being preserved to us in the names of the village where the record is found. We shall, of course, await the result of further researches to convert the presumption into a fact.

TX.

But no such scruples need be entertained in pronouncing that on the 25th of Mêdah 371, the ancient throne of Vênâd was occupied by Sri-Vira-Râmavarma-Tiruvadi. My authority for this statement is a long Vattelattu record in nine lines, inscribed on the southern wall of a small temple, in a village now called Kunangarai, to the south-east of the Veilâni fresh-water lake, about eight miles to the south of Trivandram. It would read thus in translation:—

No. 9 Vatteluttu Old Malayajam. Kunangarai Inscription of Vira-Ramavarman.

"Hail! Prosperity! In the Kollam year 371, with Jupiter in Cancer, and the sun 24 days old in Aries, is made the following grant:- The loyal chieftains of Sri-Vira-Ramavarma-Tiruvadi, graciously ruling over Vênâd, make over in writing, as a solemn gift ratified with water, the (locality of) Sérikkal, in Chenkôttaru, belonging to the said chieftains, to Vana Madhaya Narayan Vinnagar Alvan of Tirukkunagarai, to provide for all his daily expenses. and one sacred perpetual lamp. From this time forwards, the manager of the temple of Tirukkunagarai shall, under the supervision of the Six Hundred of Venad and of the district officers and agents, take sole possession of all things whatsover in this Sérikkal, with the exception of the paddy hand, granted already under command by the said chieftains to meet the expenses of the Bhattiraka of Neliyur, and the manager shall duly supply, according to the regulated measurement, four will of rice of proper quality for holy offerings, and also one sacred perpetual lamp. The paddy per year required to provide the daily offerings of four nall of rice. exclusive of pounding charges, amounting to 10 kil (?) and 24 kalum, and the ahi and thread, required every day for the sacred perpetual lump, should be supplied without failure. The expenses shall be met out of the proceeds of the 'ardi' lands on both the sides, the lower and the higher, of Cheukôttaru, and also the higher fields and Kodunkarai compound, both falling under the kirannai tenure, as well as from the (labour of the) predial slaves thereunto attached, all of which shall be now forthwith taken possession of (by the said manager). If the supply fails once, double the default shall be paid. If twice, twice the default and fine. If thrice, the Six Hundred, the officers, and the Vulanjiyars of the 18 districts shall institute inquiries, and see to the carrying out of this arrangement without failure, as long as the moon and the stars endure. Pillars 73 having been raised so as to mark and include the four limits thereof, this seri (or portion of a village) is granted, under the tiruvidaiyáttam tenure, according to royal command; all of which facts (the following) do know (and can attest), viz., Kandan Kamian of Takka Kokka compound, Kêralan Îsvaran of Tanamankottam, Âdi Tirnvikraman Parnan, and Govindan Kumaran of Pattali. This is in my hand, Kandan Udaiyanan of Kaitavav (signature)."74

Thus then, beyond all doubt, there reigned over Vênâd on the 25th Mêdam 371 M. E. or about the beginning of May 1196, Sri-Vira-Ramavarma-Tiruvadi. This date is but 23 years and a month later than that of Sri-Vira-Udaiyamārtāndavarman at Tiruvaṭṭār (inscription No. VI.) — the last firm ground we have. The interval cannot surely be considered too large for one reign, supposing we are constrained by further researches to reject, as foreign to the dynasty, both Aditya Rama of the Gôsala inscription, and Kêralavarman II. of the Arriagal fragments. But the latter contingency, at any rate, as far as Aditya Rama is concerned, is so far improbable, that it may be well set aside, except in the way of satisfying

⁷² Then sam is the word used, which means, according to Dr. Gundert, 'post with an inscription or device.'

The rest of the persons here named do not sign the deed; each says only 'he knows."

the conscience of the ultra-sceptical. If we admit then either of these two names, we abridge the interval respectively to six or three years — periods too short to disturb in the least our belief in the uninterrupted succession of the sovereigns the records have served to bring to light.

Before quitting this inscription, I would call attention to two or three striking features in the social economy of the times. Besides the village associations already noticed, Vênâd, it would appear, had for the whole state an important public body under the name of "the Six Hundred," to supervise, for one thing, the working of temples and charities connected therewith. What other powers and privileges this remarkable corporation of "the Six Hundred" was in possession of, future investigation can alone determine. But a number so large, nearly as large as the British House of Commons, could not have been meant, in so small a state as Vênâd was in the 12th century, for the single function of temple supervision. There is an allusion again in this record to the "valanjiyars of the eighteen districts." "The eighteen districts" were, no doubt, eighteen administrative divisions of Vênâd. Some of the names of these districts we may come across some day. But who the "valanjiyars of the districts" were is a more puzzling question. So far as I can make out, the word reads only as valanjiyar; but neither in Tamil nor in Malayalam am I aware of any current term of that description. It is an obvious derivative from the Tamilword valam, and the leading meaning of that term is 'greatness, dignity or honour.' If I am right in my reading, we may reasonably presume that the eighteen valanjingars were eighteen local magnates, or feudal barous of the realm. They were, as far as I can see, not men in the royal service, who are always described as those who carry out pani, meaning 'work,' or karyam, meaning 'business.' Both these latter descriptions occur in this document. But whatever was the difference in rank. emolument, and position, between those who carried out the 'work' of the state, and those who attended to its 'business,' the valanjiyars of the land would appear to have been above them both. It looks probable that the "loyal chieftains," whom we have now met so frequently transacting business in the name of the king and forming as it were his government or cabinet ministry, came from this class of valanjiyars or feudal barons. That there were slaves attached to the land, and that there were two important kinds of land tenure, aral or aranmai, subject to the village associations, and kúránmai or freeholds, directly under the state, are other interesting items of information we may glean from this record, though they may not be equally novel.

(To be continued.)

THE ORIGIN OF THE KHAROSHTHI ALPHABET.

BY GEORGE BÜHLER, Ph.D., LL.D., C.I.E,

Though the origin of the Kharoshthi Alphabet is much easier to explain than the derivation of the Brâhmi and though the general lines for the enquiry have already been settled by others, yet a somewhat fuller review of the whole question, than the narrow compass of my Grundriss der indischen Palæographie permits, will perhaps not be superfluous. The very considerable progress, which has been achieved, is chiefly due to the discussions of the Kharoshthi by Mr. E. Thomas in his edition of Prinsep's Essays, Vol. II. p. 147ff., by Dr. Isaac Taylor in The Alphabet, Vol. II. p. 256ff., and by Sir A. Cunningham, who has also settled the value of many of its signs, in his book on The Coins of Ancient India, p. 31ff.

Sir A. Cunningham's remarks refer to the first point which requires consideration in all questions of this kind, viz., the true character of the script, the origin of which is to be determined. He has emphatically recalled to the memory of the paleographists that the Kharôshthi is an Indian alphabet, and by an ingenious utilisation of his finds of ancient coins in the rains

of Taxila he has shewn that the Kharoshthi held always, during the whole period for which spigraphic evidence is available, only a secondary position by the side of the Brahma Alphabet even in North-Western India. It is rather curious that the reminder regarding the essentially Indian character of the alphabet should have been necessary, as even a superficial consideration of its letters teaches that lesson. Its full system of palatals and linguals cannot be designed for any other lauguage than Sanskrit or an ancient Prakrit, the only forms of speech which possess five sounds of each of the two classes mentioned. If this has been sometimes forgotten and even Bactria has been considered as the cradle of the Kharôshthî, the cause is no doubt the loose way in which it used to be called the "Bactrian, Bactro-Pali or Indo-Bactrian" Alphabet, which appellations are due to its occurrence on the coins of Greek kings. who, originally ruling over Bactria, conquered portions of North-Western India. Sir A. Cunningham very properly points out, op. cit. p. 35, that not a single Kharôshthî inscription has been found north of the Hindu Kush, and that in Bactria a different alphabet seems to have been used. He further proposes to substitute for "Indo-Bactrian" the Indian term "Gandharian," which would have been suitable in every way, if in the meantime the old native name had not been found. The districts, in which the largest number of Kharoshthi inscriptions have been found, are situated roughly speaking between 69°-73°, 30' E. L. and 33°-35° N. L. while single inscriptions have turned up south-west near Multan, south at Mathura and east at Kângra, and single letters or single words even at Bharahut, in Ujjain and in Maisûr. This tract, to which the Kharoshthi inscriptions of the third century B. C. are exclusively confined, corresponds to the Gandhara country of ancient India, the chief towns of which were Pushkalàvati-Hashtuagar to the west of the Indus and Taxila-Shâh Dêrî to the east of the river. And it is here, of course, that the Kharoshthi Alphabet must have originated.

In addition, Sir A. Cunningham has shewn that the Kharoshthi held always a secondary position and was used even in the earliest times side by side with the Brâhmi. This is proved by the evidence of his coins from Taxila, several of which bear only Brâhma inscriptions, or Kharoshthi and Brâhma inscriptions, with letters of the type of Aśôka's Edicts. The analysis of the legends, which I have given in my Indian Studies, No. III. p. 46ff., shews that those of four types have been issued by traders' guilds, and that one is probably a tribal coin, belonging to a subdivision of the Aśvakas or Assakenoi, who occupied pertions of the western bank of the Indus at the time of Alexander's invasion. This result considerably strengthens Sir A. Cunningham's position, as it indicates a popular use of the Brâhma Alphabet in the very home of the Kharoshthi.

The next step, which is required, is to find the class of alphabets, to which the prototypes of the Kharoshthi belonged. This problem is settled, as Mr. Thomas has first pointed out, by the close resemblance of the signs for da, na, bu, va and ra to, or identity with, the Daleth, Nun, Beth, Waw and Resh of the transitional Aramaic Alphabet, and requires no further discussion.

Then comes the question, how the Hindus of North-Western India can have become acquainted with the Aramaic characters and which circumstances may have induced them to utilise these signs for the formation of a new alphabet. Dr. Taylor, The Alphabet, Vol. II. p. 261f., answers this by the suggestion that the Akhæmenian conquest of North-Western India, which occurred about 500 B. C. and led to a prolonged occupation, probably carried the Aramaic or, as he calls it, the Iranian, Persian or Bacterian, Alphabet into the Pañjâb and caused its naturalisation in that province. Though it seems to me, just as to Sir A. Cunningham, impossible to accept Dr. Taylor's reasoning in all its details, I believe with Sir A. Cunningham that he has found the true solution of this part of the problem.

One argument in his favour is the occurrence of the Old Persian word dipi "writing, edict" in the North-Western versions of the Edicts, and of its derivatives diputi "he writes" and dipapeti "he causes to write," which are not found in any other Indian language. Dipi

is undoubtedly, as Dr. Taylor himself has stated, an Old Persian loan-word, and all the three words mentioned point to a Persian influence, dating from the Akhæmenian period. And the Saiskrit and Pâli lipi or libi "writing, document," which does not occur in the Vedic and Epic literature, nor in the ancient works of the Buddhist Canon of Ceylon, but appears first in Sútras of Pâṇini, a native of Gandhâra (traditional date 350 B. C.), furnishes the same indication, since in all probability, as Dr. Burnell conjectured, it is a corruption of dipi, favoured by a fancied connexion with the verb lip, limpati "he smears." Equally valuable is a second point, the fact that the territory of the Kharôshthi corresponds very closely with the extent of the country presumably held by the Persians. Dr. Taylor and Sir A. Cunningham very justly lay stress on the statement of Herodotus (L. III. 94, 96), who asserts that the Persian satrapy of India paid a tribute of 360 talents of gold dust. They naturally infer that the Indian possessions of the Akhæmenians must have been of considerable extent, as well as that it must have included the greater portion of the Pañjâb.

But there remain still two gaps which must needs be filled up. The Akhæmenian theory requires it to be shewn that the ancient Persians actually used the Aramaic letters and that peculiar circumstances existed which compelled the Hindus to use these letters. The second point is at present particularly important, because the literary evidence regarding the use of writing in India² (with which the epigraphic evidence fully agrees) proves that the Hindus were by no means unlettered in the fifth and sixth centuries B. C., but possessed and extensively used an alphabet, which probably was a form of the Brâhmî lipi. As long as it was possible to maintain that the Hindus became acquainted with the art of writing not earlier than 400 B. C., it was, of course, easy to understand, that the use of the Aramaic letters by the conquerors of North-Western India should have acted as a natural incentive for their Hindu subjects to form out of these characters an alphabet suited for their own language. But the case becomes different, if it must be admitted that the Hindus possessed already a script of their own before the Persian conquest. With this admission it becomes necessary to shew that there were special circumstances which forced them to use the alphabet of their conquerors.

Both the points just discussed are explained, it seems to me, by certain discoveries, made of late years in Semitic palæography. M. Clermont-Ganneau's important articles in the Revue Archéologique of 1878 and 1879 have shewn that the Aramaic language and writing, which, already in the times of the Assyrian empire, occur in contracts and on the official standard weights, were frequently employed for official correspondence, accounts and other official purposes during the rule of the Akhamenian kings in many different provinces of their empire. Egypt has furnished Aramaic inscriptions on stones and potsherds, as well as Aramaic Papyri addressed to Persian governors; in western Asia and in Arabia both inscriptions and numerous Satrap coins with Aramaic legends have been found; and even Persia has yielded an Aramaic inscription (of which unfortunately no trustworthy facsimile exists) at Senq-Qaleh, midway between Tabriz and Teheran.3 And, I may add, there is also a scrap of literary evidence to the same effect. A statement in the Book of Ema, iv. 7, points to the conclusion that the Aramaic language and writing was well-known in the Imperial chancellerie at Susa. For it is said that a letter, addressed by the Samaritans to Artaxerxes, "was written," as the Revised Version of the Bible has it, "in the Syrian (character) and in the Syrian tongue." The Samaritans would hardly have adopted the "Aramit" in addressing their liege lord, if it had not been commonly used in official correspondence, sent out from, or in to the Imperial Secretariat. The custom itself, no doubt, has to be explained by a strong infusion of Aramæans, or of men trained in the

² Indian Studies, No. III. p. 5ff.

³ See Ph. Berger, Histoire de l'Écriture dans l'Antiquité, p. 218ff., where M. Berger pertinently remarks with respect to the last inscription, that it puts us on the road to India.

⁴ As Prof. Enting kindly points out to me, a similar inference has already been drawn from the above passage by the authors of the Kuzzej. Commenter z. d. heil. Schriften d. N. u. A. Test., hg. v. H. Strack und O. Zückler; Alt. Test., Abth. 8, p. 159.

learning of the Arameans, in the lower grades of the Persian Civil Service, among the scribes, accountants, treasurers and mintmasters, and this is no more than might be expected, when a race like the Persian suddenly comes into the possession of a very large empire and becomes the heir of an older civilisation.

Under these circumstances it appears natural to assume that the Persian Satraps carried with them also into India their staff of subordinates, who were accustomed to the use of the Araman letters and language. And this would fully explain how the Hindus of the Indo-Persian provinces were driven to utilise the characters, commonly employed by the scribes and accountants of their conquerors, though they already possessed a script of their own. The Kharûshthî Alphabet would appear to be the result of the intercourse between the offices of the Satraps and of the native authorities, the Indian chiefs and the heads of towns and villages, whom, as the accounts of the state of the Paūjāb at the time of Alexander's invasion shew, the Persians left in possession in consideration of the payment of their tribute. The Hindus probably used at first the pure Aramaic characters, just as in much later times they adopted the Arabic writing for a number of their dialects, and they introduced in the course of time the modifications observable in the Kharûshthî Alphabet, for which process the additions to the Arabic Alphabet, employed for writing Hindî, furnish an analogy, perhaps not perfect, but nevertheless worthy of notice.

In support of these conjectural combinations three further points may be adduced. First, the Kharoshthi Alphabet is not a pandit's, but a clerk's, alphabet. This appears to me evident from the cursive appearance of the signs, which has been frequently noticed by others; from its (according to Indian views) imperfect vowel-system, which includes no long vowels; from the employment of the anussara for the notation of all nasals before consonants; and from the almost constant substitution of single consonants for double ones. The expression of the long vowels by separate signs, which occurs in no other ancient alphabet but the Brâhmi Lipi. was no doubt natural and desirable for the phoneticists or grammarians, who developed that alphabet.5 But it is a useless encumbrance for men of business, whose aim is rather the expeditious despatch of work than philological or phonetic accuracy. Hence, even the Indian clerks and men of business using the Brihmi have never paid much attention to their correct use, though they were instructed by Brahmans in the principles of their peculiar alphabet.6 If, therefore, these signs, which have only a value for schoolmen, do not occur in the Kharôshthi. the natural inference is that this alphabet was framed by persons who paid regard only to the requirements of ordinary life. The other two peculiarities mentioned, - the substitution of the anusvara for all masals, standing before consonants, and the substitution of ka for kka, of ta for tta and so forth, and of kha for kkha, of dha for ddha and so forth, - are clearly the devices of clerks, who wished to get quickly through their work. If thus the Kharôshthî appears to be an alphabet, framed with particular regard to the wants of clerks, that agrees with and confirms the assumption, put forward above, according to which it arose out of the official intercourse between the scribes of the Satraps and those of the native chiefs or other authorities.

More important, however, is the second point, which is intimately connected with the details of the derivation of the Khardshthi. The originals of the Khardshthi letters are, it seems to me, to be found in the Aramaic inscriptions, incised during the rule of the earlier Akhamenian kings. The whole ductus of the Khardshthi with its long verticals or slanting down-strokes is that of the Saqqarah inscription of 482 B. C. and the probably contemporaneous larger Teima inscription, which Prof. Enting assigns to circiter 500 B. C. It is also in these inscriptions that most of the forms occur, which apparently have served as models for the corresponding letters of the Khardshthi. One or perhaps two seem to rest on forms found in the somewhat later Lesser Teima, Serapeum and Stele Vaticana inscriptions, while three are connected with older letters on the Assyrian weights and the seals and gems from Babylon.

The accompanying Comparative Table⁷ illustrates the details of the derivation, as I understand it. Cols. I. and II. have been reproduced by photozincography from Prof. Entings' Tabulo Scriptura Aramaica, Argentorati, 1892, and give the twenty Aramaic signs, which, as I believe, have been utilised by the Hindus, Theth and Ain being rejected by them.⁸ In Col. I. the fat signs belong to the Teima inscription (Enting, Col. 9) with the exception of No. 1, I. b and No. 9, 1. b-c, which come from the Stele Vaticana (Enting, Col. 12). The thin signs which have been taken from the Saqqarah inscription (Enting, Col. 11) with the exception of No 4, I. a; No. 9, I. a; No. 10, I. b, and No. 20, I. a, which are from the Assyrian Weights and the Babylonian Seals and Gems (Enting, Cols. 6, 8), as well as of No. 17, I. a-b, which are from the Scrapeum inscription (Enting, Col. 12) and of No. 10, I. a, which Prof. Enting has kindly added on once more looking over the Babylonian Aramaic inscriptions.⁹

The signs of Col. II. have all been taken from Prof. Euting's Cols. 14-17, and represent the chief types on the Aramaic Papyri, which M. J. Halévy¹⁰ and others believe to be the prototypes of the Kharôshthî. They have been given in my Table chiefly in order to shew that they are not suited for the derivation. Column III. gives the oldest forms of the borrowed Kharôshthî letters according to Table I. of my Grundriss der Indischen Paläographie, and Col. IV. with the signs, which I consider to be derivatives invented by the Hindus, comes from the same source.

Before I proceed to give my remarks on the details of the derivation, I will re-state the general principles which have to be kept in mind for this and all other similar researches.

- (1) The oldest actually occurring signs of the alphabet to be derived (in this case the Kharôshthî) have to be compared with the supposed prototypes (in this case actually occurring Aramaic signs) of the same period (in this case of circ. 500-400 B. C.).
- (2) Only such irregular equations of signs are admissible as can be supported by analogies from other cases, where nations are known to have borrowed foreign alphabets. Thus it is not permissible to identify the Kharôshthi sign for ja with the Aramaic ga on account of a rather remote resemblance between what the modern researches have shewn to be a secondary form of the Kharôshthi palatal media and the guttural media of the Aramæans.
 - (3) The comparison must show that there are fixed principles of derivation.

The latter are given chiefly by the unmistakable tendencies underlying the formation of the Kharoshthi signs:—

- (1) A very decided predilection for forms, consisting of long vertical or slanting lines with appendages added do the upper portion;
- (2) An antipathy against such with appendages at the foot of the verticals, which in no case allows a letter to consist of a vertical with an appendage at the foot alone;
- (3) An aversion against heads of letters, consisting of more than two lines rising upwards though otherwise a great latitude is allowed, as the ends of verticals, horizontal strokes and curves may appear at the top.

These tendencies required two Aramaic letters, Lamed (No. 11, I. and III.) and Shin (No. 19, I. and III.) to be turned topsy-turvy, and caused in the Shin the development of

⁷ Arranged by Dr. W. Cartellieri and etched by Messrs. Angerer and Göschl of Vienna.

According to Dr. Taylor these two characters are also reflected in the Khardshthi. But the sign opposite Theth in his Table, The Alphabet, Vol. II. p. 296, is a late vra, and Ain, cannot be O, as he doubtingly suggests. M. Halévy identifies Theth with the letter, which used to be read thu, but is in reality that and a derivative from ta, see below.

² In this as well as in other respects I have to soknowledge Prof. Enting's kind assistance, who sacrificed a good deal of time in order to verify the Semitic signs, which I had selected for comparison, in the Plates of the Corp. Inscr. Sem. and carefully went with me through my Table during a personal interview in Strassburg.

¹⁰ Journ. Asiatique, 1885, p. 251ff.

long vertical out of the short central stroke, as well as mutilations of some other signs. And it would seem that the aversion against appendages at the foot is probably due to the desire to keep the lower ends of the *mdtrikds* free for the addition of the medial u, the anuscira and the ra-strokes, which are ordinarily added here; while the aversion against pendants from the top-lines and heads with many lines rising upwards was caused by the connexion of the medial vowels i, e and o with the tops of the consonants. Some other changes, such as turnings from the right to the left, have been made in order to avoid collisions with other signs, while again other modifications are purely cursive or due to considerations of convenience in writing.

As regards the details, I have to offer the following remarks regarding the Borrowed Signs.

- No. 1. The identity of A with Aleph is evident enough (Thomas, Taylor, Halévy). The long stretched shape of the Kharôshthî letter, which leans to the right, makes it in my opinion more probable that it is a simplification of a sign like that from the Saqqarah inscription in Col. I. a, than that it should be connected with the diminutive letters in Col. I. b and in Col. II. which are inclined the other way.
- No. 2. Ba is, of course, a slightly modified form of the Beth in Col. I. a-b (compare Thomas, Taylor and Halévy). The apward bulge next to the vertical has been introduced in order to make the letter with one stroke of the pen, and the bent line at the foot is represented by a prolongation of the vertical in accordance with the principle stated above. The Beth of the Papyri (when cursive forms are used as in Col. II. b-c and in Prof. Euting's Col. 15 b-c, 16 b-d) is more advanced than the Kharôshihî ba.
- No. 3. The identity of ga (Col. III.) with Gimel (Cols. I. and II.) has been recognised by Dr. Taylor alone. The loop on the right has been caused by the desire to make the letter with one stroke of the pen. It may be pointed out, as an analogy, that in the late Kharôshthî of the first and second centuries A. D. cursive loops are common in ligatures with ra and ya and that there is a looped ja, exactly resembling a ga, on the Bimâran vase in the word Munijavata. The Aramaic prototype may possibly have been set up straighter than the forms given in Cols. 1, and II., and it may be noted that such forms occur already on the Mesa stone and in other old inscriptions, see Euting, Cols. 1 and 3.
- No. 4. Da (Col. III.) comes, as has been asserted by all my predecessors, from a Daleth like that in Col. I. a, which is found, as Frof. Euting informs me, already on an Assyrian Weight of circiter 600 B. C. The cursive simplification of this letter was therefore ancient in Mesopotamia. It re-occurs in the Papyri, with a slight modification, compare especially Euting, Col. 14 b. The hook at the foot of the da Col. III. b, which occurs twice in the Aścka Hdicts and survives in the later inscriptions seems to have been added in order to distinguish the letter from na (No. 13, III. a).
- No. 5. The identity of ha (Col. III.) with He has not been recognised hitherto. But it seems to me derived from a round He, like the Teima form in Col. I. a, with the cursive transposition of the central vertical to the lower right end of the curve, which is particularly clear in the letter, given in Col. III. b, a not uncommon form in the Asôka Edicts. Similar transpositions of inconvenient pendants, which would have been in the way of the signs for the vowels, i, e and o, are not unusual: compare, e. g., below the remarks on Nos. 12 and 17. The He of the Papyri, though not rarely round at the top, shews nearly always a continuation of the central bar on the outside of the top-line, and hence is less suitable for comparison.
- No. 6. Va has preserved, as all previous writers have acknowledged, exactly the form of the Wan in the Teima inscription, which re-occurs on various later documents as the Ostraka from Elephantine and the Cilician Satrap coins, and which is foreshadowed by the letter of the ancient Assyrian Weights, Rating, Col. 6. The Papyri again offer a more advanced round form, which is common in the Kharéshthi inscriptions, incised during the first and second centuries of our era.

- No. 7. Dr. Taylor alone derives ja (Col. III. a-b) from Zain, apparently relying on the similar Pehlevi letter. The form in Col. III. a, which is found repeatedly in the Mansehra version and survives in the legends of the Indo-Grecian and Saka coins, is, however, without doubt the oldest, and derived from a Zain, like those of the Teima inscription (Col. I. a-b), in which the upper bar has been turned into a bent stroke with a hook rising upwards at the left end. In the second ja (Col. III. b) the lower bar has been dropped in order to keep the foot of the sign free. The Pehlevi letter is no doubt an analogous development. The Zain of the Papyri (Col. II.) is again much more advanced and unfit to be considered the original of the Kharôshthi sign.
- No. 8. With respect to the representative of the Cheth I differ from all my predecessors. The Aramaic letter, such as it is found in the Saqqarah inscription (Col. I. a-c), in Teima and various other documents¹³ is exactly the same as the Kharoshthi palatal sibilant ia. The pronunciation of the Indian ia comes very close to the German ch in ich, lich, etc., ¹³ and hence the utilisation of the otherwise redundant Cheth for the expression of ia appears to me perfectly regular and normal.
- No. 9.— The derivation of ya (Col. III.) from the Aramaic Yod has been generally assumed, and it has been noticed that the Kharôshthî sign is identical with the late Palmyrenian and Pehlevi forms (Euting, Cols. 21-25, 30-32, 35-39, 58), which of course are independent analogous developments, as well as that it resembles the Yod of the Papyri (Col. II. c, and Euting, Cols. 14-17), where, however, the centre of the letter is mostly filled in with ink. Still closer comes the first sign (Col. II. b) from the Stele Vaticana, and it may be that a form like the latter is the real prototype. But I think the possibility is not precluded, that the Kharôshthî ya may be an Indian modification of a form like the more ancient Assyrian Aramaic sign in Col. I. a, which differs only by the retention of the second bar at the right lower end. The rejection of this bar was necessary in accordance with the principles of the Kharôshthî, stated above, and may therefore be put down as an Indian modification. The height of the Kharôshthî ya seems to indicate that its prototype had not yet been reduced to the diminutive size, which it usually has in the Papyri, but which is not yet observable in the otherwise differing letters of the Teima and Saqqârah inscriptions.
- No. 10. The connexion of ka (Col. III.) with the Aramaic Kaph is asserted by M. J. Halévy, but he compares the sign of the Papyri (Col. II.), which is very dissimilar. I think, there can be no doubt that the Kharôshthî letter is a modification of the Babylonian Kaph in Col. I. b, which was turned round in order to avoid a collision with la and further received the little bar at the top for the sake of clearer distinction from pa. The sign in Col. I. a, which likewise comes from Babylon, has been added in order to show the development of Col. I. b. from the oldest form.
- No. 11. Lamed, consisting of a vertical with an appendage at the foot, had, as stated above, to be turned topsy-turvy in order to yield the Kharôshthi la, with which Dr. Taylor and M. Halévy have identified it. Moreover, the curve, which then stood at the top, was converted into a broken line and attached a little below the top of the vertical, in order to avoid a collision with A. The signs of the Papyri, Col. II., are mostly far advanced and cursive, so that they cannot be considered the prototypes of the Kharôshthi la.
- No. 12. The Kharôshthi ma (Col. III. a-c) is, as has been generally recognised, not much more than the head of the Aramaic Mem, Col. I. The first two forms, which are common in Aśôka's Edicts and the second of which occurs also on the Indo-Grecian coins, still show rem-

¹¹ Ediot III. 9 in raja, IV. 16 in raja, V. 19 in raja, V. 24 in praja, VIII. 35 in raja, XII. 1 in raja.

¹² It occurs even in the Papyri, though these offer mostly more advanced, rounded forms.

¹⁵ Professor A. Kuhn long ago expressed his belief that etymologically so is derived from ke through Xe.
14 The la of the Edicts invariably shews the broken line in the left-hand limb. The later inscriptions offer tead a curve open below.

nants of the side-stroke and of the central vertical or slanting stroke. But they have been placed on the left, instead of on the right. The mutilation of the letter is no doubt due, as has been suggested by others, to the introduction of the vowel signs, which would have given awkward forms, and the fact of the mutilation is indicated by its size, which is always much smaller than that of the other Kharôshthi signs. The curved head appears in the Saqqarah Mem, which I have chosen for comparison, as well as on Babylonian Seals and Gems (Euting, Col. 8 e) and in the Carpentras inscription (Euting, Col. 13 c), and the later forms from Palmyra prove that it must have been common. The Mem of the Papyri are again much more cursive and unsaited for comparison.

No. 13. — Regarding na (Col. III. a), which is clearly the Nun of the Saqqarah (Col. I. a.b) Teima, Assyrian and Babylonian inscriptions, it need be only pointed out that the forms of the Papyri are also in this case further advanced than those of the Kharôshṭhì. The na, given in Col. III. b, is a peculiar Indian development, not rare in the Aśôka Edicts.

No. 14. - The identity of sa with the Aramaic Samech (Col. I.) has hitherto not been recognised. Nevertheless, the not uncommon form of sa with the polygonal or augular head. given in Col. III., permits us to assert that also in this case the Gandharians used for the notation of their dental sibilant the sign which one would expect to be employed for the purpose. The ton stroke and the upper portion of the right side of the Kharôshthi sa correspond very closely to the upper hook of the Samech of Teima, being only made a little broader. The little slanting bar in the centre of the Samech may be identified with the downward stroke, attached to the left of the top line of sa, and the lower left side of sa appears to be the corresponding portion of the Samech, turned round towards the left in order to effect a connexion with the downward stroke. These remarks will become most easily intelligible, if the component parts of the two letters are separated. Then we have for Samech 7, and for sa 7. The forms, in which the right portion of the head of se is rounded, are of course cursive. The Teima form of the Samech with the little horn at the left end of the top stroke is unique in the older inscriptions. But the Palmyrenian letters (Enting, Cols. 24-29, 32-33, 37, 39-40), though otherwise considerably modified, prove that the Someck with an upward twist must have been common. Finally, the corresponding Nabatsean characters (Enting, Cols. 46-47), are almost exactly the same as the Kharôshthi sa and shew that the changes, assumed above, are easy and have actually been made again in much later times. The signs of the Papyri are again far advanced and unsuited for comparison.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., LC.S.

(Continued from p. 267.)

Kiss. — The sense of the religious or ecremonial kiss seems to be that in a kiss a spirit passes. The cases of kissing detailed below come under the four following main heads: — (a) In the kiss the kisser draws to himself and so imprisons the sickness or ill-luck that haunts the kissed; (b) the kisser passes to the kissed the kisser's virtue or lucky influence which scares from the kissed the spirit of evil; (c) the kisser with a kiss sucks into himself the healing influence of the holy kissed; (d) the same spirit passes between the kisser and the kissed.

In an English Court of Law the order to the witness to kiss the Book or Bible which he holds in his hand means that in the oath the swearer has called God to witness that he speaks the truth. By the kiss the spirit of truth passes from the Book, whose word is truth, into the swearer, and, if the witness lies, this outraged indwelling spirit of truth will rend him to destruction. That in certain cases the object of kissing is to suck the virtue or good influence of the person kissed, is shown in eighteenth-century England by the engerness of pregnant

....

women to kiss the hand of the king. 80 Similarly, Egyptians kiss the threshold of a sacred tomb, Arabs kiss the Ka'aba or black stone of Makka, and Tibetan Buddhists kiss the cushions on which the Tashi Lâma has been seated. Oa In the new synagogue at Prague (1885) a Jew guide, who had by accident touched a sacred scroll, kissed the hand that touched the scroll, the object apparently being to take into himself in a proper reverential manner any share of the scroll influence, which through contact had in an irregular way passed into his hand. So to suck virtue out of the box the Beni-Isra'il of Kölaba, in entering or leaving his house, as he passes the box which holds the sacred text, touches the box with his first two right fingers and then kisses them. 31 The kissing of a king, of a child, or of other object of worship, is not only that the guardian spirit of the kissed should pass into the kisser. The object in many cases is that the kisser should by kissing take ill-luck from the kissed. So the Druses of Mount Lebanon kiss the hands, face and beard of the dead chief.82 A variety of this idea appears in the practice which is as old as Job, of kissing the hand to the New Moon, or, with Sir Thomas Browne, to Fortune; 33 in the Peru habit of kissing the air in adoration of the collective divinities; 84 in the practice of the priests of Aesculapius in Italy (A. D. 140) saluting the god by raising and kissing the circle of the thumb and first right fluger tip.85

In Bombay, when Sayyids come out of a mosque after evening prayer, a group of boys may be seen near the mosque gate. Each boy holds in his arms a sick child of one or two years, and in his hand a copper-pot filled with water. Each Sayyid, when he comes out of the mosque, turns to the boys, and, repeating holy verses from the Kurán, lays his right hand on the sick child's head, and then gives the back of his right hand to the sick child to kiss. At the same time from his mouth, purified by the holy words of the Kurán, he breathes on the water in the boy's copper-pot. The kissing of the Sayyid's sacred hand scares the evil spirit which is making the child sick, and the drinking of the water, purified by the inbreathed spirit of the Kurán prevents the return of the evil spirit.⁹⁸ That in certain cases the object of the kiss is to suck out evil spirits is illustrated by the practice among the Brâhmans of Southern India of the chief mourner kissing the mouth, nose and other openings of the corpse before the pyre is lighted.⁸⁷ Also by the Tibetan exorcist drawing out disease-demons by sucking a hollow arrow set on the suffering part.^{87a}

Worshippers at Jêjurî, in the Bombay Dekhan, before entering the temple, kiss Khandobâ's horse, whose virtue scares from them all hovering evils, before they draw near the god. 88 The Beni-Isra'il mother, on the fifth day after child-birth, holds her ears and kisses a lamp three to five times, the spirit of light in the lamp driving out the spirits of darkness which have lodged in her during her time of peril and uncleanness. 30 In Makka, the virtue-taking inferior kisses the hand of the superior, and the virtue-giving superior kisses the inferior's brow. Equals, sharing in one spirit, kiss hands. 90 At the enthroning of a Persian king all present kiss his feet.91 The Jews kissed the feet and the knees of their crowned king.92 Compare the kiss-worn bronze toe of St. Peter in Rome which men and women kiss, laying their brow on the toe and curtseying.93 The Jews kissed the calves they worshipped.94 The great toe of the statue of Jagannath Śankarśets in Bombay, is white with kissing. Compare Leo the Isaurian (A. D. 726) ordering images to be set higher, that no one might kiss them.95 At a great fire at Antioch the Bishop gave the cross to the people to kiss that it might be their viatioum to the next world. ** On Good Friday, the Pontiff adores and kisses the cross. The clergy and the people follow.57 In the Early Greek Church, on Christmas Day, the Emperor kisses the picture of the Nativity.98 The early Christians kissed the doors, threshold and pillars of the church. 98 A boy was cured

of disease by kissing the threshold of St. Mark's Basilica.100 Before taking the Sacrament the early Christian kissed the left horn of the altar.1 When the novice was admitted into a monastery he kissed the monks' hands and begged their prayers.2 Among the early Christians the pricet first and then the other friends kissed the corpse at the grave.3 Lucilla of Carthage. in the time of Diocletian (A. D. 300) tasted, that is, kissed the mouth of a dead martyr before eating and drinking theelements.4 Besides the kiss of peace and the kiss of reverence the early Christians practised ceremonial kissing after prayer, after Communion, after Baptism, after Ordination, at espousals, to the dying, and to the dead. Among the early Jews a kiss was a ceremonial marriage salutation.6

The liability to injury from the accidental intrusion of outside substances must have been one of the chief risks of the early life. This experience explains why the seven deadly spirits of the Babylonians lived among the thorns of the mountains.7 It also explains why the first part of Hindu Salya, or Surgery, is the removal of external substances accidentally introduced into the body, as grass, wood, stones, iron, earth, bones, hair, and nails.8 Finally it explains why, among many wild peoples, the presence of some foreign substance is considered the cause of all disease. From this early experience and belief it followed that the sovran cure of sickness is either direct or indirect sucking with the object of removing the foreign cause of sickness. Among the Zaparo Indians of South America, among the Papuans, among the Banks' Islanders, and among the Tasmanians, the sorcerer cures wounds by sucking out steel splinters, bones and worms. So also the Amana Indians and the Australians suck the sick and draw out evil spirits.10 When a child is hurt the English mother kisses the place to make it well. Compare auts with their mouths staunching the wounds of some of their number whose feelers were cut off. 11 In 1864, when he agreed to be Emperor of Mexico, Maximilian kissed the representative of the Mexican nation.12 A kiss, probably the kiss of peace or oneness of spirit, is the salutation among European sovereigns. In Venice, in 1608, the traveller Coryate¹³ noticed that, when the nobles or clarissimos met in the street, they gave at parting a mutual kiss to one another's manly cheek. A custom, he adds, I never saw before, nor heard of, nor read of. Elderly Australian women salute a stranger by kissing him on both cheeks.14 When a Greek left his home he kissed the soil. When he landed in a foreign country he kissed the soil. He kissed his native soil again on his return. 15 The Romans kissed the back of their right hand when they passed a temple.16 A Greek suppliant kissed the temple threshold.17 The suppliant Priam kissed the knees of Achilles and the storm-stayed Odyseus the knees of the Egyptian king. 18 The Greeks and Romans saluted guests by kissing their lips, hands, knees and feet. When a solemn kiss was given, especially to a child, it was the custom to hold the person kissed by the ears, apparently to prevent the escape of the spirit which passed in the kiss. This was called the pot kiss.19 The same holding of ears is practised among the Russians when the bridegroom first kisses the bride after marriage." The Russian husband and wife, after the wedding ceremony, kiss each other three times. To prevent misfortune in Banff in Scotland (1800), if a newly married couple

chance to meet on the road, they salute each other by kissing.²² Before Easter Sunday the Russians kiss every one in the family in token of good will.²³ On Easter day, the Czar kisses a soldier in each regiment,24 The Russians and the Druses kiss the dead.25 The Russian bishop kisses the sacred pictures, and the people kiss the bishop's hands.26 In Russia, the priest's canonicals are kissed and signed with the cross before they are put on.27 Among the Danes, when a girl hears the cuckoo, she kisses her hand, and asks the cuckoo when she will he married.28 In German and Russian nursery tales, great powers are ascribed to a kiss. The maiden spell-bound in the form of a snake, dragon, toad, or frog, is freed from the spell by being thrice kissed.39 A kiss blots out of memory everything bad or unpleasant. Again, a kiss brings back remembrance, and the unbinding of a spell is said to hang on a kiss.30 The sense being that the kisser's influence passing in the kiss drives from the person kissed evil memories or the evil spell-spirit. Of a kiss counteracting a spell Sharpe³¹ gives the following example: - "In England, in 1603, a man thought his cow was bewitched; he would not go up to her till he had raised the tail and kissed under it." The Pope, on being installed, has his right foot and hand kissed by the Cardinals, his foot and right knee by the Bishops, and his foot by others,32 Roman Catholic Bishops and priests kiss the vessel that holds the sacred oil,33 In England, before the Reformation, when the service was ended, the congregation used to kiss the pax, a board with an image of Christ on the Cross, the kiss being the kiss of peace, the spirit of peace passing from the image into the kisser, and so making the whole congregation of one spirit.34 In the words of St. Cyril (died A. D. 444) the sacramental or eucharistic kiss is the sign that our souls are mingled together.35 Similarly, in the Greek Church, the bride and bridegroom thrice kiss the cross.36 So also in the early Christian Church the taking of the Sacrament was preceded by the kiss of peace.37 Similarly, in England (A. D. 600-1000), drinkers kissed after pledging each other in wine. Compare the Peruvians who, before drinking, kissed the air two or three times in token of adoration.38 At the end of a Beni-Isra'il feast, the minister kisses a portion of bread and salt, and sends it round to the guests, each of whom kisses the bread and tastes the salt,39 When (A. D. 1547) Edward VI. of England was crowned, the people kissed first his right foot and then his cheek.40 At York and Newcastle (1825), in halls and in kitchens, kissing-bushes of mistletoe, greens, ribbons and oranges were hung, under which the men might kiss the girls, probably to draw into the kisser the hovering influences which haunt the evil dying year and might otherwise have harmed the kissed. According to an old Scottish custom the man who first enters a house after twelve o'clock on New Year's morning has a right to demand a kiss. 42 In the kiss passes the spirit of the guardian New Year which the man brings with him. Compare for the new moon:—"In England (1825), whoever is first to see the new moon may kiss one of the opposite sex and claim a pair of gloves."43 In Yorkshire and in Scotland, the clergyman used to kiss the bride after the wedding service, and in Ireland, the kiss of the bride and bridegroom was part of the ceremony.44 In England and in Russia, at the end and at the beginning of a dance, it was the practice to kiss.45 Another old English rule is that, if a woman kisses a man who is asleep

without waking him, she win- a pair of gloves.46 Perhaps, the sense of this glove-winning is that the kiss sucks out the soul of the sleeper, the soul in sleep being apt to leave the sleeper's roly, and that the owner redeems his soul by the gift of gloves. In England, to kiss a black cut is lucky. The proverb says :- "Kiss the black cut, twill make ye far. Kiss the white one. it will make you lean."47 In this case the black cat seems to be a scape into which passes any evil spirit of learness by which the kisser may have been haunted.

Leather. - Fainting or hysterical patients are restored to consciousness either by being beaten with a shoc or a leather thong, or by inhaling the fames of burnt leather. Therefore spirits fear leather. So, in the Dekhan, a person troubled with nightmare sleeps with a shoe under his pillow, and an exercist feightens a spirit by threatening to make it drink water from the tanner's well. Poona Kunbis believe that to drink water from a cobbler's hands destroys s witch's power.48 Similarly, a Gujarat witch's power is taken away by shaving her head. beating her with a twig of the arka or giant swallow-wort and pouring down her throat water out of a tanner's jar. 40 Among the Kunbis of the Dekhan, if a man feels he has been struck by an incantation he at once takes hold of an apturned shoe. The Tirmalis, a Telugu caste of beggars in Poona, on the fifth day after birth, lay a leather shoe or sandal under a child's pillow to scare evil spirits. The Shôlâpûr Kômtîs set an old shoe under the babe's pillow to keep off cvil spirits. The Mochis of Ahmadnagar, who are of southern origin, on the fifth night after a birth, worship Satvai, and lay a shoe under the child's pillow to keep away evil spirits.52 Among the Ahmadnagar Bhils, those who have been put out of caste are let back by paying a tine, and when too poor to pay they stand before the caste with their shoes on their heads. 53 In Thàna, people fasten old shoes to fruit-trees, in order that they may not be blighted by the Evil Eye, and may bear good fruit.54 The Bijapûr Dhûr bride stands in a basket filled with rice and leather.55 If a Dharwar Patradavaru, or dancing girl, is struck with a shoe, she is out of caste, has to pay a fine, and go through penances.56 In Dharwar, a Brahman woman never wears shoes, except when she is lying in.57 At a Lingayat wedding, in Dharwar, the bridegroom's mother sits on a bullock's saddle, taking the bridegroom on her right knee and the bride on her left knee.58 In South India, Hindus lift their shoes and swear at the whirlwind, which in Tamil districts is known as pishacha, or devil. To take off your shoes if you meet a great man and never to enter a house with shoes on, are two main rules of conduct in South India. 50 i)r. Buchanan tells how when his butler saw the ghost of a cook who had lately died, he put his shoes on the right side of the door, and so drove off the ghost.61 To strike with a slipper is a great offence in Southern India. Any man who is so struck is put out of caste.63 In Bengal, in a Briliman wedding ceremony, at the evening or spirit-time, the bride and bridegroom sit on a When the Brahman bride first enters the bridegroom's house she is red bull's hide.63 scated on a red bull's hide.64 In the Godavari districts, when a woman is pregnant, to keep off demons, women burn a heap of rice husk, and tie a shoe to one door-post and a bunch of tuls: to the other post.65 To scare a demon out of a person, the Shanars apply a slipper or a broom to the shoulder of the possessed. In Lancashire, Cornwall and London, if on going to bed you leave your shoes sole up, crossed, or, peeping out from beneath the coverlet, you need not fear cramp.67 The Circassians hang a goat-hide on a pole to keep off lightning.68

The Jewish tabernacle and sacred vessels were covered Persians had a leather standard.69 with skins.⁷⁰ The Jews had a custom of handing over a shoe to confirm a contract.⁷¹ German Jews. at the last gasp or before execution, have knotted leather thongs bound round their arms and head.72 Roman Jews wear little rolls of parchment written with words in peculiar ink anclosed in black calf's skin and tied to the arm or brow to keep off evil influences, especially nightly terrors.73 Among the Felops of the Gambia Coast, West Africa, if a father is killed in a brawl his son wears his father's sandals once a year. In Bornou, in North Africa, married women are careful to cover their beds with skins when their husbands visit them. 75 The lamh-skin or white leather apron is the badge of the freemason.76 The Alaska Esquimaux Indians (North America) clothe the dead in a frock of skin.77 Among the Oregon Indians, at their funeral pyres, the doctor tries to restore life, and if he fails, he throws a slip of leather on the dead.78 Some Indian tribes wrap the dead in buffalo hide.79 Hugh Lupus, the great Earl of Chester (A. D. 1120), was wrapped in leather and laid in a stone coffin. 80 According to Bancroft. Vol. III. p. 519, the Americans put sandals on the dead. At the Lupercalia, the object of the Roman vouths, in striking people with a thong of leather, was probably at first to drive away spirits. Barren women tried to receive a cut of the thong hoping the stroke would make them conceive, that is, hoping that the spirit that made them barren might be driven out of them. Compare at the Indian Muharram some of the sporters striking men and women on the head with leather rolled in the form of a club.81 The original object of the Roman and Skandinavian practice of fastening shoes on the feet of the dead may have been either to prevent the spirit coming back, or to prevent evil spirits entering the body.83 To bring luck to the family American negroes keep all old shoes and old leather in some place in the house. 83. The Gypsies consider that ill-luck is bound and loosed by a shoe-string.84 In Germany, throwing shoes over one's head and seeing which way the points look, reveals the place where one is destined to stay longest.85 In Ireland, persons were elected by throwing a shoe over them,86 and as late as 1689 tattered brogues were thrown into the grave of the Irish piper.⁸⁷ In England, shoes are thrown for luck after the bride and bridegroom, and after the youth who is leaving his family and friends.88 Rustics mark their shoes' outlines on the tops of the steeples of churches.89 In the West Highlands of Scotland, on New Year's Eve, at the laird's house, a man dressed in a cow's hide used to run round and be beaten with sticks, 30 and in Lincolnshire, on Palm Sunday, there was a custom of cracking a leather-thonged whip. In Durham, on Easter Tuesday, wives beat their husbands, and on the next day husbands beat their wives with shoes.22 In Gujarat. beating with a shoe is a common device for driving out an evil spirit in a possession case. This suggestion of possession is perhaps an element in the Musalman horror of placing a slipper on the head. The Urdu proverb says: — "Give me bread and lay your slipper on my head." An English folk-guard against the ill-luck of hearing a dog howl (or rather against Death the vision of whom makes the dog howl) is to take off your left shoe, place it sole up, spit on the sole, and set your foot on the spittle." Spitting on the shoe as a precaution against the Evil Eye was approved by Pliny and is still practised in Italy. In 1647, freshmen at Oxford

had on Shrove Tuesday to take an oath on an old shoe.³⁶ In the north of England (1825), to dream of their true love, girls laid their shoes soles up under their pillows.³⁷ Similarly, Dorsetshire girls put their shoes by their bedside in the form of a T or cross, saving:—

"Hoping this night my true love to see, I place my shoes in the form of a T."98

In China and the Malay Peninsula, no iron tools, leather, or umbrellas, may be brought into a mine for fear of annoying the earth spirits. The Brâhman worships sitting on the skin of the black antelope. The Hindu ascetic dresses in a deer or tiger skin. The skin of the victim ram was drawn over the statue of Jupiter Ammon. The oracle-seeker at Delphi slept in the victim's skin. To the early man the hide was a great guardian. It formed his clothes, his armour, and his means for carrying food, drink and coin.

Apart from its usefulness, the source of the holiness or evils-earing power of leather is that the spirit of the animal to which it belonged lives on in the skin. So, in Tibet, the greatest of oaths is for the swearer to lay a Scripture on his head, and, sitting on the recking hide of an ox, to eat part of the ox's heart. 100

FOLKLORE IN SOUTHERN INDIA.

BY PANDIT S. M. NATESA SASTRI, B.A., M.F.L.S.

No. 39. - Devoted Vatsalá.

In a certain village there lived a Brâhman named Patanîbhâgya. He had an affectionate wife named Vatsala. She was a very good woman, and was equally kind to all the members of her household, and especially to her mother-in-law, the mother of Patanibhagya. She was so sincerely attached to her that Vatsala's attachment to her mother-in-law became proverbial throughout the village. Some people regarded it as madness, and began to doubt as to how she would survive her mother-in-law, as, in all probability, the old woman would die first. But the more considerate thought Vatsala to be merely a little wanting in common sense, and that was the real truth. She considered her mother-in-law as a goddess, and, apart from her sincere devotion to her, she was under the strong belief that no daughters-in-law could live in the world without mothers-in-law to guide and rule them. Every morning, as she rose up from her bed, she first worshipped her mother-in-law, consulted her taste in cooking the household meal, prepared only those dishes which she ordered, served her meal first, and then attended to the table of others. Thus it was with Vatsala; and her motherin-law, on her part, as, of course, was natural, was deeply attached to her. Thus passed several happy years. But time must work its changes, and the old people must die giving place to new, and the end of the mother-in-law approached, and she passed away in the arms of her daughter-in-law. The funeral rites followed and after a time the house revived from the mourning. It was a natural death in good old age. There was not much sorrow felt in the family. But to Vatsalâ the world became a nonentity. She had nothing now to care for in the world. Her monitor was no more. Who would receive henceforth her devotions? Who would direct her in her household duties? These became great riddles to her. Patanibhagva advised her to cheer up, but to no effect. His sound arguments were of no avail to soothe the sorrows of Vatsala, for she had not that quots of common sense, - the general property of all: what she wanted was some tangible and material object to be respected as her mother-in-law.

"I must have a mother-in-law. Give me a mother-in-law, my dear hushand," mourned Vatsala.

[&]quot; Journal Straits Branch R. A. Soc. p. 82.

Finding all reasoning to be vain, and, pitying his poor wife, who was so good and kind to him in everything, he went a little out of the ordinary way and promised to supply Vatsalâ with a mother-in-law. He went to a carpenter and brought a wooden image, and, presenting it to his wife, addressed her thus:—

"My dear Vatsalâ, you are dying for want of a mother-in-law. I have consulted several doctors and learned men. They gave me a wooden mother-in-law for you. You can now be happy. You can worship this as your old mother-in-law. Consult this wooden image in household duties, and be thus in every way happy."

Vatsalà's pleasure at the receipt of a substitute for her mother-in-law can be better imagined than described. She placed it in a prominent part of the verandah of the upper storey of her house. To her it was everything. She consulted it. She fed it twice a day with a sumptuous meal, and spent every minute that she could save from household duties to the care of the image. But how could the wood speak? How could the wood eat? These were plain questions with plain answers to Vatsalà. For she devised the answers after putting the questions to the image, and imagined that the answers came from the mother-in-law herself. She would stand before the image and ask:—

"My mother, what shall I prepare you for your dinner to-night? You have not been well to-day."

After putting this question, she would herself answer :-

"Yes, I understand you. Your order is that I should prepare pepper-water without ddl. I shall do so."

Her simplicity was a source of general amusement. She would spread a large leaf before the image and serve on it the meal meant for her mother-in-law. Some mischievous relation would wait for an opportunity and take away all the meal, leaving the leaf clean. But Vatsalâ thought that her mother-in-law had swallowed it all. Thus passed some days.

Patanibhagya had to go out on a mercantile tour with a neighbour for a few months. He supplied the house with grain and articles of food to last for six months, and started on his journey. His neighbour did the same, and followed him. Other relations of Patanibhagya. too, had to go away, and thus Vatsalà was left alone in the house with her wooden mother-inlaw. She was very glad of this. Her only living friend was the wife of the neighbour who had accompanied Patanîbhûgya on his tour. That their husbands were friends on tour was the great cause of this friendship, though they were of opposite natures. Vatsula was an idiot and a fool, but the other woman was the very type of intelligence and canning. Finding Vatsala was a great fool, and it did not take much time to discover this, she wanted to profit by it. Whatever ill-health Vatsalâ imagined in her wooden mother-in-law she would aggravate. She recommended sumptuous meals for the mother-in-law as the only cure for weakness, and Vatsala spent all her leisure in preparing rice of several kinds, puddings. muffins, etc., etc., to feed her, and all these were served twice and even thrice a day. Her friend took them all away secretly, and thus saved herself the trouble of kindling a fire-at her own home, growing fat at the expense of Vatsala. She saved all the articles stored up by her own husband. Vatsala did not care for the expense. If her mother-in-law was well it was all in all to her: and was she improving? Yes; undoubtedly, at least to Vatsalâ she was, and her friend told her so every day. Thus things went on for some months.

Their husbands returned from their tour. Patanibhagya examined his house, and discovered that he must supply his house again with food. He asked his wife how it was that everything was exhausted so soon, while she was the only soul at home to cat.

"My dear husband, how is it that you have forgotten your mother, my mother in law?" Ever since you left us, she was always falling into weak health, and I had to feed her every

day sumptuously. Must not two souls eat? And must not my mother-in-law be fed?'s replied she.

The patience of the husband was exhausted. However much he might have excused her for her foolishness, the waste of all the food touched him to the quick.

"May you and your mother-in-law go to hell!" roared he, and, kicking the wooden image first, he dealt the same punishment to his wife. The wife did not feel herself insulted in any way, but she felt acutely the sufferings of her mother-in-law.

"You have kicked her down. May the gods curse you! You have kicked your own mother. How will the gods excuse you? O my mother-in-law, my dear mother-in-law. In your old age to be thus kicked! What a great shock you must have received by your fall?" wept Vatsalå, and, disregarding her husband's blows, she flew to the fallen image, took it up in her hands, and protected it from further injury from Patanîbhâgya.

The husband could contain himself no more. He drove his wife with her precious mother-in-law out of the house. Not that she cared: for she had still her mother-in-law, and could go with her where she pleased and live comfortably. For is not a mother-in-law a goddess to daughters-in-law? Thus arguing with herself, Vatsalâ left the village that very evening, carrying on her shoulders her poor mangled mother-in-law, and walked through a forest. The sun had just set. Darkness covered the world. Vatsalâ, notwithstanding the charm of a goddess on her shoulders, was a little afraid to pursue her way through the forest all alone. She wanted to rest somewhere for the night; and where else could she rest but on a tree? So she climbed up a tree and with her mother-in-law in her hands sat there for the night.

The tree on which Vatsalâ sat was in the middle of a thick forest, and was a large and broad one; and it was the tree under which the robbers of the forest used to assemble to divide among themselves the plunders of the night. Just at the last watch of the night nearly a dozon robbers came, and were engaged in separating their plunder into several groups as the share for each. Vatsalâ had no sleep the whole night and now she heard the horrible conversation of the robbers. The counting of coins jingled on her ears. Her whole frame trembled, and down fell the wooden mother-in-law as the first effect of her fears, just as the robbers were proceeding to take possession of their respective shares. They knew that the Rajâ's men had been watching them for a long time, and so in the twinkling of an eye most of them ran away. After her mother-in-law down came Vatsalâ with a horrible crash, and those that remained imagined her to be the very Rajâ himself. So away they ran, and the wood was cleared of the robbers. Vatsalâ fell down senseless, but after a time she recovered her senses. The morning had now dawned and she perceived the heaps of coin with her wooden mother-in-law in their midst. She fell down before her goddess and worshipped her.

"What will your son — that son who kicked you last evening — say now, when I return to him with these hoards of money? O my goddess! O my holy mother-in-law!"

So saying, Vatsalä collected everything in haste and returned home. Meanwhile, Patanibhägya, after the excitement of the moment, was very sorry for his cruelty to his poor wife, for
it was a settled fact that she was an idiot. So he waited for the morning to go out in search of
her; and great was his joy when she herself returned to him with so much money! In her own
fashion, she told the story about the money, and how her mother-in-law had given it to replace
the exhausted store at home, and preached to her husband that he must be more kind to such a
kind mother! The sight of the money consoled him much, though at heart he laughed at his
wife's theory, and was not blind to the true cause of the acquisition. And what is lost in
humouring an idiotic and stupid, but for all that, a good wife? So Patanibhägya stored
up all the money, and told his wife that all the good fortune was due to her devotion to her
mother in law.

"It is my goddess, my mother-in-law, my dear husband, that gave us all this wealth," repeated Vatsalâ even before her husband finished his speech.

"Yes, true it is, true it is. From to-day worship her all the more for it," repeated the husband.

That noon her cunning friend visited Vatsalâ, who, in her own plain way, related the great boon that her mother-in-law that day conferred upon her family by the gift of unexpected wealth. The neighbour heard it with great pleasure, for her avarice had already devised for her a plan of her making herself rich in the same way. Outwardly she promised to worship her own mother-in-law in that way, and made a copy of Vatsalâ's image, but her secret intention was to go to the tree in which Vatsalâ had hidden herself the previous night, and try to see whether fortune would favour her also. For this purpose she carefully noted the exact position of the tree.

As soon as night approached, without the knowledge of the husband, she ran to the forest to the very tree and concealed herself in it with, of course, the wooden mother-in-law, to surprise the robbers. Even as she expected, the robbers came that night also, and became engaged in dividing their booty. She threw down first the wooden stump, and the robbers were a little afraid at first; but their money, hard won in their own way of thieving, was not to be thus easily given up every night. So they made a careful search, and caught bold of the woman.

"You wretched hag: you are caught at last," roared they. "You frightened us last night, and we were fools and ran away. But now instead of killing you we will make a lesson of you to others who would thus dare to beard us in our own den."

All the shricks and crics of the woman, and her pleadings that the woman of the previous night was a different one were of no avail. Her hair was cut. Her nose was cut. And thus mutilated she was driven out of the forest and reached home with her body disfigured for her pains.

Her husband, who had missed her the previous night, received her with great anger, and on hearing the cause of her disfigurement spoke to her in very severe terms. He plainly told her that it was her avarice that brought her that just punishment. But what was to be done next? He applied soothing medicines to her broken nose and advised her never to relate her story to any one, and thus ends the story.

MISCELLANEA.

SOME REMARKS ON THE KALYANI INSCRIPTIONS.

(Continued from Vol. XXIII. p. 259.)

(13) Malayadipa.

Malayadipa may be identified with the Malay Archipelago. Its native appellation is Malayu. The capital of the region may be fixed as Malacca, which has now been deserted for Penang and Singapore. The Malayu betel-nut is still famous in Burma, and it must have been introduced when there was frequent intercourse between the Burmese and Malay ports.

Råhulathêra went to Malayadîpa in 543, Sakkarâj, or 1181 A. D. He was well received by the king, who was evidently a Buddhist, as he was desirous of learning the Vinaya Pitaka. The Kalyani Inscriptions add:—"The king was pleased with the thêra, and presented him with an almsbowl filled with many kinds of gems." As attested by the following passage cited in Yule's Hobson-Jobson, p. 416, the wealth of the country during the period in question appears to be an undoubted fact:—

"c. 1150. 'The Isle of Malai is very great... The people devote themselves to very profitable trade; and there are found here elephants, rhinoceroses, and various aromatics and spices, such as clove, cinnamon, lard... and nutineg. In the mountains are mines of gold, of excellent quality... the people have also windmills.'—
Edrici, by Jessert, i. 945."

(14) Dhammavilásathéra.

It is a most lamentable fact that the study of bacgraphy as well as of history is not held in steem by Burman's hence the meagreness of details in biographical notices of native writers.

Dhammavilasa was the title given to Sariputtathera by King Narapatisibu (1174-1228 A. D) for his ability and eminence in learning. The thera was a Talaing by birth and was a active of Padipagilyva village in the province of Dala. He was educated at Pagan under Anandathera of the Sinhalese fraternity. The king desired to appoint Sariputta to be one of his Precentors, but unfortunately he was debarred from carrying out his object by the rigour of a custom prevailing at all Oriental Courts that all recipients of royal favour shall not labour under any physical defect. One of the big toes of the thera was shorter than its natural length, and he was accordingly disqualified for any high post under the Government. To compensate for the boon missed by him the king bestowed upon him the title of Dhammavilasa, and commissioned him to propagate the Buddhist Religion in the maritime provinces. What has rendered his name illustrious in Burms is the authorship of the Dhammavilåsa-dhammabat, which is not now extant. There is, however, a commentary on it, which was compiled in the 17th Century. This latter work comprises 86 palm-leaves, eight lines to the page. The chapter on "Inheritance and Partition" has been translated and published under the editorship of the late Dr. E. Forchhammer, and forms No. VII. of the series of Votes on Buddhist Law issued by Mr. Justice Jardine, now of the Bombay High Court.

The dates of birth and death of Dhammaviläss, as well as of the completion of his Dhammabat are unknown. Even the Sasandlankara, compiled as late as 1832 A. D. by the learned exmonk Maungdaungsado, the Archbishop of King Bödöp'aya at Amarapura, is silent on these points.

(15) Lakkhiyapura.

This place may be identified with the modern Letk'aik, a small insignificant village on the Dalà side of the Rangoon river, but the Bakass river cannot now be identified.

(16) Kambôja.

and the contract of the contra

This is the classical appellation of Cambodia, the ancient empire of the Khmers, whose influence in the valleys of the Salween and Irrawaddy ceased with the foundation of the kingdom of Siam, with Ayuthia as its capital, in 1359 A. D. (see note 9, aute, Vol. XXIII, p. 250f.).

In Burmese official writings the Shan States to the East of the Irrawaddy River are collectively called Kambója. In this connection it may be interesting to note that the appellation, "Shan," applied by the Burmans to the whole Tai race, is a corrupted form of "Cham." Kambója was also known as Champâ, and its people were called "Cham." Vide s. v. "Champa," "Shan" and "Siam" in Yule's Holson. Jobson.

(17) Dalapura.

Dalapura is the modern Dalà opposite Rangoon. Tradition says that it was founded by a princess from Thatôn, whose king had just beaten off a Cambodian army. In after times Dalà formed a dependency of Syriam, and in view of its origin, was always an appanage of a princess or a lady of rank. Owing to its contiguity to Cape Negrais, which was the base of operations of Arakanese raiders and invaders, it was deemed to be of some strategic importance.

(18) Visumgama.

The validity of the ordination of a Buddhist monk and his consequent status in the Order depend mainly on the validity of the consecration of the sima where the ordination was performed. A simd is, again, valid or otherwise according as its site is visumgama or not. Thus the whole fabric of the Buddhist Church rests, to some extent, on the solution of the vexed question of visumgama. The frequent squabbles and controversies regarding the validity or otherwise of ordination are due to this fact. These controversies have now been happily set at rest in Burma by the Local Government, which issues grants of visumgama land for the construction of simds under the seal and hand of the Chief Commissioner

(19) The Religion of Buddha will last 5,000 years.

As Sir Monier Monier-Williams has endorsed this idle tradition and published it to the world in his great work on Buddhism¹ it is essential to

^{1 &}quot;And here again, in regard to the doctrine left behind by each, a vast distinction is to be noted. For the doctrine delivered by Christ to His disciples is to spread by degrees everywhere until it prevails eternally. Whereas the doctrine left by Buddha, though it advanced rapidly

by leaps and bounds, is, according to his own admission, to fade away by degrees, till at the end of 5,000 years it has disappeared altogether from the earth, and another. Buddha must descend to restore it. Monier-Williams' Buddhism, pp. 556, 567.

ascertain the basis on which the statement is founded. The Buddhists do not question the truth of the statements in the Páli texts of the Tripitaka, but they are at liberty to criticise the commentaires, such as the atthakathás, tikits, etc. In the present case, the limit of the continuance of Buddhism is fixed by the atthakathás, and not by the Buddha himself.

The Dighanikaya, the Mahavagga of the Si ttapitaka, and the Mahaparinibbanasutta do not contain any allusion to the question, but distinctly say, on the other hand, that the succession of monks will never be interrupted so long as there is peace and concord among them: "Sace, Subhadda, ime bhikkha samavihareyyum, asunno luko arahanteki assa."

In the Chalavagga, however, it is said that Gautama Buddha was averse to the admission of nuns into the Church, as he foresaw the risk accruing to the Order of Monks, and declared that his Religion would last 1,000 years if no nuns were admitted, but only 500 years if they were. This is, of course, only a hypothetical statement, and an euphemistic avowal of unwillingness to recognize the Order of Nuns which was subsequently formed. But the commentators took a serious view of the matter and, being constrained to put a literal interpretation on the declaration, prolonged the period of 1,000 years to 5,000, which they had no authority to do. In the Châlavaggat-

thakatha a period of 1,000 years is assigned to each of the following classes of saints:—

- (α) Paţisambhidâpatta;
- (b) Sukkhavipassaka;
- (c) Anagami:
- (d) Sakadâgâmî;
- (e) Sôtapanuî.

In the Angutturatthakatha a similar assignation is made, and the following are the classes:--

- (a) Paţisambhîdâpatta;
- (b) Chhalabhiñña;
- (c) Tevijiaka:
- (d) Sukkhavipassaka;
- (e) The observers of the Patimokkha.

Personally, I am inclined to think with Froude's that Truth is writ large on the tablets of eternity, and that it is idle to set bounds to the limits of eternity.

(20) Mahavihara.

When Mahinda, the son of Aśûka, was sent to Ceylon after the 3rd Buddhist Council, Devânampiyatissa, king of that Island, after the manner of Bimbisâra, king of Râjagriha, who presented the Buddha with the Vêļuvana Monastery, presented the Missionary Prince with the Mahâmêghavana villa, which came to be known as the Mahâvihâra. The vicissitudes of the Mahâvihâra sect are briefly detailed in the Kalyânî Inscriptions.

TAW SEIN-KO.

(To be continued.)

NOTES AND QUERIES.

A CEREMONIAL MUTILATION.

In (Buchanan) Hamilton's East India Gazetteer (1815), page 337, the following curious passage occurs:- "Near Deonella or Deonhully, a town in Mysore, is a sect or sub-division of the Murresoo Wocul caste, every woman of which, previous to piercing the ears of her eldest daughter, preparatory to her being betrothed in marriage, must undergo the amputation of the first joints of the third and fourth fingers of her right hand. The amputation is performed by the blacksmith of the village who, having placed the finger in a block, performs the operation with a chisel. If the girl to be betrothed be motherless, and the mother of the boy have not before been subjected to the amputation, it is incumbent on her to suffer the operation. In these districts this caste occupy about 2,000 houses, and for the original

2" First, it (history) is a voice for ever sounding across the centuries the laws of right and wrong. Opinions alter, manners change, creeds risecand fall, but the moral law is written on the tublets of sternity. For every false word on narighteous deed, for cruelty and oppression, for lust or vanity, the price has to be paid at last: not always by

cause of this strange ceremony, they relate a long legend. (F. Buchanan) (Hamilton's) Travels in Mysore in Asiatic Researches.)"

DENZIL IBBETSON in P. N. and Q. 1883.

A HINDU HOUSE-WARMING.

When the house is finished Brahmans and the friends of the family are feasted. The mistré (master-builder) attends the dinner, and receives from the owner complimentary gifts, such as shawls, turban, clothes, and money, as his merits and the generosity of his employer dictates. During the building a lamp is often kept burning all night. This is to prevent bhuts (ghosts), and churtle (female ghosts), and the like, from taking up a lodging in the new abode.

J. L. KIPLING in P. N. and Q. 1883.

the chief offenders, but paid by some one. Autice and iruth glous endurs and live. Injustice and falsehood may be long-lived, but doomeday comes at last to them, in French revolutions and other terrible ways." — Freude's Short Studies on Great Subjects, Vol. I. p. 27.

BOOK-NOTICES.

SOME NEW CATALOGUES OF SANSKRIT MSS.

WE have received Dr. Peterson's excellent Catalogue of the MSS. in the Ulwar Library.1 It consists of a nominal list, with, in many cases, full descriptions of nearly two thousand five hundred works, to which is appended an unusually large collection of extracts, in which no less than six hundred and seventy-eight MSS, are illustrated. A third of the whole collection is devoted to Vedic works and works on Philosophy. Rhetoric, Dharmer, and Astronomy are well represented, and there is a small collection of Prakrit books, some of which appear to be of value, although this portion of the catalogue gives merely the titles, with few further particulars The book is absolutely devoid of discritical marks of any kind. Even long vowels are not noted. but in other respects, it is throughout edited with the scholarly accuracy which distinguishes all Dr. Peterson's labours.

The Government of Bengal is issuing in fasciculi, a Catalogue of the MSS. in the Library of the Calcutta Sanskrit College.2 The first fasciculus has been printed at the Secretariat Press, and a wise discretion has been exercised in transferring the second and third to the Press of the Baptist Mission. Experience has shewn that Government printing departments are not adapted for the correct production of carefully edited Sanskrit books. The present work is as yet incomplete, and till the necessary indexes have been received it is difficult to analyze its contents. The style is the same as that of the well-known Sanskrit catalogues of Rajendra Lala Mittra, with which it may well be compared. When completed, it will, no doubt, be as useful as its fore-runner.

Let us hope that the Bengal Government, at whose expense it is issued, will make the book easily available to purchasers in Europe and not bury the copies (without advertisement) in the cellars of Writers' Buildings, to be sold as waste paper, after being given a decent number of years to risen for the paper mills.

ORIENTAL MUSIC, a Monthly Periodical, Edited by A. M. CHINNASWAMI MUDALITAR, M. A., Ave Maria Press, Padupet, Madras, 1898.

This periodical appears to have been started with the following objects:—to familiarise the

European ear with the peculiarities of Oriental Music; to help the people of the country to understand European Notation, and to appreciate the beauties of Harmony; and to record the music of India which is fast fading into decay.

It is a somewhat comprehensive programme, of which the third part would appear to be the most worthy of support.

A complete and trustworthy record of the musical productions of India, with descriptions of the instruments used, and the manner in which they are manufactured and played, and accounts of the principal masters of Indian music, will be of great value to Orientalists, as, with the exception of Captain Day's work, no such record exists.

The European ear, with its previous training by the European scales and divisions of the octave, is not likely to appreciate the Oriental scales and divisions; and on our keyed instruments, as at present tuned, it is not possible to render Oriental Music correctly or to describe it in European Notation. On instruments of the Violin family this music can be played, but in the pages before us no indications are given in the notation by which this should be done.

With a specially devised notation Oriental music could be rendered on such an instrument as Mr. Bosanquet's Enharmonic Organ, but, as we have said, Europeans are not likely to seriously adopt Oriental Music.

To attempt to teach Harmony to the Indians from the starting point of their own music would be "ploughing the sands," and it would be far easier for them to approach the subject as a separate science, and to study the European textbooks.

"Oriental Music" is evidently the work of an enthusiast, and the record being made is a valuable addition to the literature of a little known subject. It is only by the investigation of Eastern music that we shall be able to understand the music of the ancient European nations, and Mr. Chinnaswami Mudaliyar will do good work for science in continuing what he has so carefully commenced. We would draw his attention to Notes and Queries on Anthropology, Chapter XII., which he will find to be an excellent guide to the requirements of science in the matter.

(1892) by Hrishikêia Sästri; printed at the Bengal Secretariat Press; Part II. (1894) by the same, and Siva Chandra Gui, M.A., B.L., printed at the Baptist Missien Press; Part III. (1895), same author and printer.

SOME EARLY SOVEREIGNS OF TRAVANCORE.

BY P. SUNDARAM PILLAI, M.A.

(Continued from p. 285.)

X.

THIRTEEN years later we meet with another king of Vênâd, Srî-Vîra-Râma Kêralavarma Tiruvadi. I base this statement on a Vaṭṭeluttu inscription in the temple of Srî-Padmanâbhasvâmin in the capital itself. Unfortunately, however, it is a mutilated one, nearly one half of it being missing. All the greater pity, since the fine bold Vaṭṭeluttu characters, in which it is inscribed, would have otherwise made it, both palæographically and historically, one of the very best samples yet to hand. The locality in which this mutilated document is now found, can scarcely have been its original abode. Indeed it cannot be said to be fairly above ground! And any one wishing to pay it a visit must be prepared for an uncomfortable attitude! Passing by the flagstaff and going in at the main eastern gate of the temple, let him walk straight on till he crosses the gateway of the second enclosure. There, if he will stoop low enough, he will descry in the gloom in the nethermost row of stones forming the low passage wall to his left, the object he is in quest of, neat and remarkably well dressed for the situation. With the help of other inscriptions in my collection, I have in a measure succeeded in conjecturing what this stone when complete would have told us; and with the omissions so supplied, the translation of the document would read thus:—

No. 10 Vatteluttu
Ro. 10 Old Malayalam. Padmanabhasvamin Temple Inscription of Vira-Rama-Kêralavarman.

"Hail! Prosperity! In the Kollam year 384, with Jupiter in Cancer, [and the sun * days old in Gemini],75 in the presence of the Tiruvanandapuram assembly and its sabhañjita, assembled in the southern [hall] of Mitranandapuram, [under the solemn] presidency of [the Bhattaraka], * * tinga⁷⁶ Pallavarayan, [the loyal chieftain of] Srî-Vîra-Irâman [Kêralavarma Tiruvadi] of holy Vênâd, [made a free grant of certain lands] belonging to the said * tinga Pallavarayan, in Cheyyaman and Kalattûr, [to be taken charge of by such and such, under such and such arrangements,] with the object of providing daily four nale of rice and condiments, [partly] to be used as offering to the Perumal of Tiruvanandapuram, and [partly] to feed one Brâhmana, besides providing every year on the Uttiram star in (the month of) Panguni,77 [a special feast or lustration]. [The daily offering to the Perumal shall be made] when a man's shadow in the sun measures 12 ft.78 [and the rice so offered shall be made over to such and such, who in return therefor] shall supply [each day] one garland to adorn the Perumal. If the supply (of this stated quantity) of paddy fails once, [double the default shall be paid. If twice, twice the default and fine. If thrice in succession, the property shall be confiscated, and the amount of paddy recovered and measured out. [If any dispute arises thereon,] the case shall be taken to Sri-Padam and the question then finally decided. To which effect [witness below our hands, * * of Kaitavilagam. The first half-yearly [payments will be due] in the month of Vrischikam in Kollam 385."

Such in substance would be the document, if the portions lost are supplied, as far as it is now practicable to do, with the help of the context and of similar records in my possession. Happily for us, however, so far as important historical facts are concerned, there is little or no room for any legitimate doubt. For instance, comparing this inscription with the one to be given next, there can be no reasonable doubt that the full name of the king who ruled Vênâd on

⁷⁵ The parts within square brackets are those supplied.

75 Looks like a corruption of Chings or Simha,

76 The principal festival of the temple still takes place about this time. Uttiram or Utram is a star about
the tail of Leo Major.

⁷⁸ Technically called pandradi or 'the 12th feet offering."

the date of this document, was Sri-Vira-Iraman Kêraļavarman. The last letter in the part of the name actually found is \hat{n} , which can combine with no other letter in the alphabhet than \hat{n} is and the next inscription, which is but five years later, completes the name exactly as we should expect. Fortunately for us, again, the last word with which the opening line breaks off, is "Kollam 384,"—the year of the document; and this date is confirmed, if need be, by the closing line, fixing the time for the payment of the first half-yearly dues in Vrischika 395. This mention of the month, with which the first half-year ends, enables us further to fix the month of the grant itself as Mithuna preceding. Supposing a full half-year was to expire it. Vrischika for the payment to be due, we have only to shift the date of the grant a month earlier, i.e., Idavam 384. Thus, then, we may be perfectly sure that, about May or June 1209, Venad was ruled by Sri-Vira-Rama-Kêraļavarma Tiruvadi.

Certain other inferences, equally unquestionable, may be also made from the record in hand. For instance, it is impossible to doubt that in 384, Trivandram, like so many other villaces, had a sabha or assembly, with a sabhanjita, chairman or secretary, of its own, and that it used to meet on occasions of importance in the old temple at Mitrânandapuram, about a regards of furlongs to the west of the present shrine of Sri-Padmanabha. The south-western corner of the courtyard of this temple is still pointed out as the sacred spot where sabhás used to meet of old, and the word 'tek' or south, in our inscription, serves as no dubious guide to that Shot. The raised floor of this hall still remains, but the roof, which must have resounded with the voice of many a wise council, is now no more. Fragments of apparently very old inscriptions in the Mitranandapuram temple speak also of memorable meetings of the sabhû in the same "southern hall." These meetings are recorded to have taken place in the "solemn presence" of the Badara or Bhattaraka Tiruvadi of the locality, enabling us thus to infer that the solemn presence, with which the meeting here recorded is said to have been honoured, must have been also of the same mysterious personality. It would appear further from an inscription at Suchindram, dated 406 M. E., that there was at that time a senior Badara Tiruvadi at Trivandram, in superior charge of the temple management. From this latter document, I am led also to suspect that by "Śri-Pâdam," to whom, according to the record in hand, the final appeal was to lie, in case of dispute in the administration of the land in question, is meant also the same religious functionary. This expression has now somehow or other come to be used to designate the palace, where the queen-mother resides with the junior members of her family. But the context in the Suchindram record, above referred to, militates against that modern application of the term.

I would draw attention to the curious way in which the name Trivandram is here spelt. I'wice the word occurs in the portion of the inscription preserved to us, and on both occasions it is clearly spelt Tiruvanandapuram with a long &, meaning 'the holy city of blessedness,' and not, as it is now universally understood, the city of Ananta, the serpent. The deity, too, of the place is named Perumal, 'the great one,' and not Padmanabha, 'the Lotus-navelled.' Is it possible that the City of Blessedness passed into the City of Ananta, the serpent, with the transformation of the infinite and indefinite 'great one' into the definite Padmanabha, whose mattress Ananta is? The analogy of Mitranandapuram, the oldest temple of this town, lends support to the orthography of the inscription. But on the other hand, the Suchindram inscription, already referred to, spells the name in the usual modern fashion. So also does the hymn in the Tiruvaymoli, dedicated to the local deity, though, in this case, it is not as decisive as with Tiruvaymoli, since neither rhyme nor metre will be wholly spoiled by the substitution of one of the names for the other; and as far as I can remember, the town is mentioned nowhere else in Tamil literature.

The Sanskrit name Syanandura for Trivandram only adds to our doubts and difficulties. Underivable proper names are by no means common in any Indian language, and in Sanskrit,

there are but very few names of any class whose etymology cannot be traced to well-known roots. But Syanandura, though used familiarly by Sanskrit scholars both in inscriptions and in standard Malayalam works,80 is analysable according to no known rules of grammar. It looks in the highest degree incredible that the Aryans of Upper India could ever have been under the necessity of inventing such an arbitrary and unanalysable name for so petty a village in the Dravidian country. In all probability then, it must be a Sanskritized corruption of a Dravidian name now altogether lost to us. The last syllable in Syanandûra sounds like ûr, the Tamil term for village or town, but what the preceding two syllables stand for, it is difficult to conjecture. If the word were Sryanandura, we could have taken the body of it as made up of sri or ticu in Tamil, and ananda, as preserved to us in the inscription before us as well as in the name Mitrânandapuram. But in that case there would have been no necessity for any corruption at all. My impression, therefore, is that the original native denomination of the town must have been a Dravidian word ending in ur. The form Syanandurapura occasionally met with tends to shew that ura was a part of the original name and no corruption of pura, since pura is itself added to it. At any rate, the name could not have been either Anandapuram, as in our inscription, or Anantapuram, as in current use, since both of them are good Sanskrit words, needing no corruption to suit the genius of that language.

XT.

We have seen already that in Idavam or Mithuna 384, i. e., 1209 A. D., the government of the country was in the hands of Sri-Vîra-Irâman Kêralavarman. This same sovereign was in power on Thursday, the 18th Mînam 389 M. E. If any one wishes to assure himself of the fact, it would cost him nothing more than a pleasant trip to Kadinankulam, just 12 miles north of Trivandram, on the backwater route to Quilon. On the north-western wall of the temple of Mahâdêva in this village, he would find a Vaṭṭeluttu inscription in four lines to the ollowing effect:—

No. 11 Vatteluttu | Tamil. Kadinankulam Inscription of Vîra-Râma-Kêralavarman.

"Hail! Prosperity! In the year opposite the Kollam year 389, with Jupiter in Aquarius, and the sun 18 days old in Pisces. Thursday, Pushya star, at the 10th lunar day, Aries (being the rising sign), and Srî-Vîra-Irâman Kêralavarma Tiruvadi of Kîlppêrûr being the gracious ruler of Vênâd, Srî-Vîra-Irâman Umaiyammai Villavar (?) Tiruvadi graciously caused the consecration (of the idol inside)."

This neat inscription, giving full details of its date even to the hour, would have been altogether unexceptionable, but for a difficult word which I am not quite sure of, between Umaiyammai and Tiruvadi. We need not be particularly sorry for this, if we could be but sure that it was a part of the proper name of the founder of the temple. But as it stands, the proper name would appear to be completed with Umaiyammai, and the intractable word after it would seem to describe her status or position, in which case, indeed, it must be of supreme historical importance for us to know exactly what it was. The title Tiruvadi is found throughout our records reserved to royalty. It occurs even here just a line above in connection with Srî-Vîra-Irâman Kêralavarman. Who then could this additional Tiruvadi be? The name given, Srî-Vîra-Irâman Umaiyammai, is a curious compound, Srî-Vîra-Irâman being a masculine name, the first part in fact of the name of the then ruling king, and Umaiyammai, an appellation as distinctly feminine. In a compound name like this, usage as well as grammar would determine the sex of the person so named by the ultimate particle of the name, and we have, therefore, practically no doubt that the founder of the temple was a female, entitled, however, to royal rank. The interesting question then is, did she belong to the same royal house as

⁸⁰ Vide, for example, the Vairagiga-Chandridaiyam.

sı Pûyam or Pushyam is a star about the head of Hydra.

the then through a respect to the so, what was the particular relation in which she stood to that rater? The research the question will be perceived, only when the following facts are formed in mineral three most place, this is the earliest record I have yet found of any female member of a regal tand's bear country where succession is believed to have been always in the tenack live. In the evend place, it is also the first occasion, excepting the Arrifigal fragments, wante we have the Lamily designation of Kilpperar. And lastly, it must also be noticed that the temple at Kadmankulum, the institution of which this inscription records, is exactly equidistant be wen Tileandram and A. ringal, - and, therefore, a convenient stage in a journey from one to the other. Both tradition and local inquiry would prove that the village of Kadinahkadar - if cone into prominence, it not also into existence, only in consequence of its having been saitable halting place, and that it continued to retain its importance, so long as it was used as such, i. c., before the Shanankarai Canal connected the present capital with the backwater system of the north. Is it fanciful or farfetched then to suppose that the temple, of which our inscription records the foundation, was the direct fruit of extended political relations in the North, say, such as would arise from the annexation of Arringal to Vegad and the anadgamation of their respective royal houses, assuming, as we have already done, the original independence of Argingal or Kûpadêśa? If the hypothesis is allowable, we might take both the Princess Umaiyammai and the present family name of Kî'pı êrûr as, coming from A. ingal, and accruing to the Vênad sovereign by right of adoption, marriage, or other alliance. It is a pity, therefore, that the word after Umaiyammai, which might have helped to solve some of these difficulties, happens to be so unyielding. As far as I can make out, it looks only like Villavar, which carries no meaning to my mind.82 Until. therefore. further researches throw more light on the question, we should be content to accept the indistinct word to be a special title of Princess Umaivammai in the Vênâd royal house itself.

But whoever Princess Umaiyammai may have been, the document proves beyond all doubt that on the morning of Thursday, about 8 p. m., the 18th Minem 389 M. E., i. e., 1214 A. D., the throne of Vênad was occupied by Sri-Vira-Iraman Kêralavarma Tiruvadi. We know he was on the throne in 384. But when he ascended it, and when exactly it passed to his successor, are points yet to be determined. We meet with another sovereign of Vênâd only in 410 M. E., and we may, therefore, provisionally take his reign to have extended to the close of the 4th Malabar century.

XII.

With the opening of the fifth century of the Kollam Era we meet with another king of Vênâd, by name Srî-Vîra-Ravi-Kêralavarman. That the 28th Mêdam 410 M. E. fell within his reign, is proved by a Vatteluttu inscription at Manalikkarai, a pretty village near Padmanâbhapuram in South Travancore. The document is found inscribed on all the four sides of a tablet specially put up in front of the Âlvâr temple in this village. The face of the sablet contains 23 lines, its obverse 32, and the two sides 37 and 17, respectively. Why the idocument was entered on a special tablet, and not on the walls of the temple as was the custom, t is impossible now to ascertain. Possibly its singular importance demanded this singular greatment. For, if my reading of it is correct, it is nothing short of one of the great charters of Travancore. Its substance, as far as I can make out, would run thus in English:—

No. 12 Vatteluttu
Old Malayajam. Manalikkarai Inscription of Vira-Ravi-Kêrajavarman.

"Hail! Prosperity! In the year opposite the Kollam year 410, with Jupiter in Scorpio, and the Sun 27 days old in Aries (i. c., the 28th Mêdam), is issued the following proclamation,

^{*2} It is possible that villater is a mistake for ilwigater, meaning 'the younger.' There are one or two other dated Vattelatta inscriptions in the place, but unfortunately, as the stones bearing them have been repeatedly white-washed, plastered over and painted, only portions of the lines are now open to view. I went to the spot a second time on the 16th June 1894 to try whether the broken lines could not help us over the difficulty, but returned no wiser than I went.

after a consultation having been duly held among the loyal chieftains of Sri-Vira-Iravi-Kêralavarma Tiruvadi, graciously ruling Vênâd, the members of the subhâ (or assembly) of Kodainallur, and the people of that village, as well as Kandan Tiruvikraman of Marugatachchêri, entrusted with the right of realizing the government dues. Agreeably to the understanding arrived at in this consultation, we command and direct that the tax due from government lands be taken as amounting in paddy to * * * * and 24, in arakk-d⁵³ crop, and 725 * and 24, in charai crop, and making up per year a total of * * * * ; and the same, due from tax-paying village84 lands, be taken as amounting in paddy to * * * and 24 in arakkal crop; and 728 * and 24, in charal crop, and making up per year, a total of * * $709\frac{2}{30}$; and that when the due quantity is measured out, a receipt be granted, discharging the liability, the fact being duly marked also in the rent roll; and we command moreover that the order of permanent lease (now in force) be surrendered into the hands of the clerks who write or issue such deeds * * * * *85 From the Tuvâmi (or Svâmi), too, no more shall any lease be taken. When part of the tax is paid, and part is still due, a list shall be prepared shewing the arrears for the whole year; and an anchaliss (or authorization) taken in writing to realize the same from the sabha and the inhabitants; and the arrears then recovered accordingly. In seasons of drought and consequent failure of crops, the members of the sabha and the people of the village shall inspect the lands, and ascertain which have failed and which have not. The lands that have failed, shall be assessed at one fifth of the normal dues, but this one fifth shall be levied as an additional charge on the remaining lands bearing a crop. If all the taxable lands appear to have equally failed, the sabha and the villagers shall report the matter to the Tuyami, and after the Tuvâmi has inspected the lands and ascertained the fact, one fifth (of the entire dues) shall be levied. This one-fifth shall be taken to include patta-vritti and ina-chelavu, amounting in paddy to * *. If the members of the sabhá and the inhabitants agree among themselves, and pray in common for a postponement of the payment, as the only course open to a majority among them, this demand (one fifth drought rate) shall be apportioned over all the lands paying tax to government (to be levied in the subsequent harvest), but without interest and nattari, the rent roll of the current year being scored out. Should anything whatever be done contrary to these rules, the deviation shall be visited with fine. * * * and the strict procedure again adopted. This our regulation shall continue in force as long as the moon and the stars endure. This is a true stone-inscribed copy of the royal writ."

Such is the substance of this remarkable document, as far as I can make it out. Containing, as it does, several obsolete revenue terms, I cannot vouch for the literal accuracy of every word in my rendering. One or two expressions still remain obstinate and obscure. Nevertheless, I feel sure I cannot be far wrong with the bulk of my interpretations. Nor can there be any doubt as to the unique importance of the record. Unlike the inscriptions hitherto noticed, this one grants, not a perpetual lamp or 'a mountain-like' drum to the gods above, but peace and protection to toiling humanity here below. One of the most momentous questions in all human communities has been, and will always be, the price each individual in it has to pay for the advantages of organized social life. In proportion to the fixity and definiteness characterizing this price, in all its aspects, is the government of the community said to be civilized, stable, and constitutional. An important item in the price to be thus paid is the pecuniary contribution given by each individual for the maintenance of the state. In all agricultural countries, the bulk of the contribution must assume the form of land tax. In Travancore, then, which is little else than agricultural, where in fact there is no individual but has his taravid, his plot of land,—the plot in which he is born, in which he lives

⁸⁵ Arakkal and charal seem to have been the crops of those days; now they are called kanni and kumbham.

St Obviously then there were lands that paid no tax to government.

⁸⁵ There are about 5 or 6 words here which carry no meaning to my mind. So also after the word ' fine ' about the end of the deed.

³⁶ I take this word conjecturally to mean some kind of authorization.

THE PROPERTY AND A 1 ST . T THE TOTAL THE TOTAL THE PROPERTY AND A 1 ST . T THE TOTAL
and years, and in which he dies and is cremated too, so that his very ashes stick to it even attenties and departs this world, - in a country so entirely agricultural, there can be no question of more dial interest, or of more universal concern, than the nature and amount of land tax. the manner and time of paying it, and the machinery through which it is realized for the state. It appears to have been the practice with several governments in bygone days to farm out the land revenue to the highest bidders, with a view to save themselves the trouble and expense of collecting it in dribblets. The iniquity of the system may be better imagined than described. It seems, nevertheless, to have been current in the neighbouring districts of There welly and Madura, to the very days of the East India Company. But in Travancore, thanks to the village associations and the magnanimity and political sagacity that seem to have uniformly characterized the Venid sovereigns, the system, if it was ever largely introduced, was nipped in the bud, and the disasters of the fable of the goese with the golden ears were early averted. For, observe how the royal writ before us deals that system a deathblow. It quietly takes away, in the first place, its sting by fixing the government dues exactly and unalterably per year and per harvest. The lease again is not to be a 'tira taravu,' an endaring one, but to be renewed from time to time, so that the government farmer would have no chance of abusing his power on the strength of the hold he might otherwise have on the people. The writ provides, further, for the reduction of the government demand to one fifth in times of drought and failure. Why, when some lands alone fail in a village, this one fifth should be given up on those lands, but levied as an additional charge upon the remaining might demand a word of explanation. It seasons of partial failure, and in tracts of land not fully opened out by easy lines of communication, the price of corn easily becomes high; and the Kôdainallir Council ceans to have thought it just, or at all events conducive to fellow-feeling, that those that are benefited by such an adventations rise of prices, should forego a portion of their profits for the sake of their suffering fellow-villagers. At any rate, the measure must have acted as a check upon false complaints of failure, since the daty of determining what lands had failed, and what not, was left to the villagers themselves under the supervision of the sabha. It would be interesting to know who the tucami er sraint was, to whom the edict assigns the duty of ascertaining and certifying the fact, in case the whole village fails. He was, no doubt, some high ecclesiastical functionary, with a considerable portion of the land revenue of the village probably assigned to him for his own support and the support of the temples he was in charge of. The prohibition to take out leases from the tuvámi would then mean a prohibition to farm out to the highest bidder the land revenue so assigned to him. Anyhow, when the srami certifies a complete failure of crops in the whole village, the government reduces its total demand to one fifth, and foregoes, in addition, its right to levy two minor charges, under the names of patta-vritti and ona-chelaru, 97 a special contribution to keep up the annual national festival of that name. Deviation from the rules is forbidden under some severe penalties, the extent and nature of which, however, I am not able to discover; and the rates of assessment as well as the rules are declared unalterable as long as the moon and the stars endure. Could a permanent revenue settlement go further? Or could a more deadly blow be imagined on the farming system, which seems to have been allowed to do so much mischief, and for so long a time, in the neighbouring Tamil districts? The preamble to this remarkable proclamation adds but a charm and a dignity of its own to the whole. It is said that the edict is issued in terms of the understanding come to in a council composed of the loyal chieftains or ministers of the king, the assembly of Kadainallur, the people of the village, and Kandan Tiruvikraman, the local revenue farmer or collector. I call him the collector; for, however oppressive a lessee or farmer he might have been before the date of this document, he and his successors in office could have been nothing

at Onem or Scavanam is a star in Aquila. The national festival is called by this name, because it falls on the day the moon reaches this maneion in September. It is probably connected with the harvest, Parasurama's yearly visit being a later fiction. Tenants do present to this day to their landlords certain agricultural products under the name of One-kilcha.

more than simple collectors of revenue, after the exact definition of the government dues given in the edict itself. No doubt, he must have been a terrible man in his day, with an appointed function in the evolution of history, not unlike, perhaps, the one played by those who went forth to demand 'ship money' in the days of Hampden. The good people of Kûdainallûr seem to have been also equal to the occasion. Here is proof, if need be, of the independent nature and constitution of the old village assemblies of Travancore. The sabhás being mentioned side by side with the people, it is impossible to take them as mere occasional assemblies of the inhabitants, summoned together, for the time being, by those in charge of the administration. Here they appear as permanent and well-constituted public bodies that acted as a buffer between the people and the government. The village or common lands, so clearly distinguished from those directly under government, in this record, were in all probability everywhere under their management. What exactly was the service the good subha of Kôdainallûr was able to render on this occasion, or what exactly were the circumstances that brought about this memorable council itself, we have as yet no means of knowing; but whatever they were, the whole procedure reflects the greatest credit on all the parties concerned, their conjoint action resulting in so precious a charter to the people, and so unmistakable a monument of the sovereign's unbounded love of his subjects. Though the wording of the document makes the enactment applicable primarily only to the village of Kôdainallûr, I have no doubt it was sooner or later extended to the whole of Vênâd. A just principle needs but once to be recognized to be applied on all hands. I hesitate not, therefore, to call this Manalikkarai proclamation one of the great charters of Travancore. Entered as it is on a detached stone, and containing as it does several expressions yet dark and obscure, it would be well to remove the original document itself and to preserve it in the public museum at the capital, where, I have no doubt, it would now receive better treatment than was accorded to a similar tablet from Varkkalai, which, having discharged well and long the duty of a grindstone, is now so far defaced as to reveal nothing more than its ancient age and its iniquitous sufferings !89

But the immediate purpose for which the Manalikkarai charter is here introduced, is to prove the rule of Srî-Vîra-Ravi-Kêraļavarman on the 28th Mêdam 410 M. E., or about April 1235. Having met Srî-Vîra-Râma-Kêraļavarman only 21 years prior, we may take the two reigns as having been conterminous with one another.

(To be continued.)

THE ORIGIN OF THE KHAROSHTHI ALPHABET.

BY GEORGE BUHLER, PH.D., LL.D., C.I.E.

(Concluded from p. 292.)

No. 15. — The identity of pa with Phe is plain enough (Thomas, Taylor, Halévy). The Semitic letter (Col. I.) has been turned round in order to avoid mistaking it with A. The form with a hook, attached to the right top of the vertical (Col. III. a) occurs still a few times in the Mansehra version of the Edicts. Usually the hook or curve is placed lower, as in Col. III. b, and it may be noted that in the Mansehra pa it is attached nearly always very high up, in the Shâhbâzgarhî letter not rarely lower.

No. 16. — On phonetic grounds it may, of course, be expected that *Tsade* should have been used for the Indian cha. But the recognition of the real Kharoshthi representative has been

³⁸ This is a remarkable old specimen of a Vatteluttu inscription. It seems to be dated 79 M. E. I believe it comes from Varkkalai. It opens with a string of Sanskrit words written in old Malayalam characters in praise of the then ruling king. The body of the document is in Vatteluttu. But in spite of all my repeated endeavours, oil abhishikams and pulius without number, I have not succeeded as yet in coaxing it to reveal even a line in full, the middle of it being so completely defaced by the use to which it was put by the Maramut coolies. A hundred times the cost of the mortar ground on it would not have been ill spent, if it had been spent in the preservation of this unique aucient monument. It appears to me to record an important treaty between certain parties, of whom Uyyakkondan was surely one.

impeded by the circumstance that the earlier tables of the alphabet neglect to give the form of clas, which comes closest to the Semitic letter, riz., that with the angular head (Col. III.). The tables give only the cha with the semicircular top, though the other form is by no means rare in the Edicts and is used also in the cha (Col. IV.) of the same documents and even survives in the late Khardshthl inscriptions of the first and second centuries of our era. If the angular cha is chosen for comparison, it is not difficult to explain how the Kharoshthi sign was developed. The Hindus made the top of the Tsade (Col. I. a-b) by itself, separating it from the remainder of the vertical, and omitted in accordance with the principles of their writing, which do not admit more than two strokes at the tops of letters (see above), the small hook on the right of the angle. Next, they placed the lower part of the vertical under the point of the angle and in doing so added a small flourish to the top of this line, which in course of time became an important element of their sign. The Tsades of the Papyri (Col. II.) come very close to the Kharoshthi and the second even shows the small projection on the left, just below the top. Nevertheless, they are only independent analogous developments. For in both, the long line on the left has been made continuous with one stroke of the pen and the hook or curve on the right has been added afterwards. Moreover, in the sign Col. II. b, it is very plain that the small projection on the left of the main line, which makes the letter so very like the Kharêshthî cha, has been caused by a careless continuation of the right hand hook across the vertical.

No. 17. — The utilisation of the ancient Qoph for the expression of kha in the Brahma Alphabet suggests the conjecture that the curious Kharashthi sign for kha may be derived from the corresponding Aramsic character. And in the Serapenm inscription the Qoph (Col. I.) has a form which comes very close to the Kharashthi kha. Only the upward stroke on the left is shorter and there is still a small remnant of the original central line of the ancient North-Semitic character. The smaller Teina inscription¹³ (Enting, Col. 10) has a Qoph, in which the central pendant has been attached to the lower end of the curve (compare above the case of the Kharashthi ha). These two forms, it seems to me, furnish sufficient grounds for the assumption, that in the earlier Aramaic writing the component parts of the looped Qoph (Col. II. c) were disconnected and arranged in a manner, which might lead to the still simpler Kharashthi sign, where the central pendant seems to have been added to the upstroke on the left in order to gain room for the vowel-signs. To this conclusion points also the first corresponding sign of the Saqqarah inscription (Enting, Col. 11 a) though the top has been less fully developed and the ancient central pendant has been preserved much better. 16

No. 18. — Ru (Col. III.) has been recognised as the representative of Resh by all previous writers. But it deserves to be noted that the sign, which comes nearest to the Kharôshthî letter is the character from Saqqârah, given in Col I. b. 17 The Papyri offer mostly more advanced forms with top lines sloping downwards towards the right.

No. 19. — Regarding Shin (Col. I.) and its Kharôshthî counterpart, the sign for the lingual sibilant is (Col. III.), see above. I may add that round forms of Shin appear already on the Babylonian Scals and Gems (Enting, Col. 8).

No. 20. — The oldest representatives of the Semitic Taw appear in the dental tha (Col. IV. a), which consists of the old Assyrian Aramaic Taw (Col. I. a) of the 8th century B. C., 18 or of a slight modification of the very similar Saqqarah letter (Col. III. 1 b) (turned round from the right to the left) plus the bar of aspiration on the right, about which more will be said below, and in the lingual ta (Col. IV. b-c), where the second stroke on the right in b and on the left in c denotes the organic difference or, as the Hindus would say, the difference in the rarga. In the second form of ta (Col. IV. c) the bar, which originally stood at the side, has been added at the top, and out of such a form the dental ta (Col. III.) appears to have been

To Compare the end of L I of the faceimile in M. Ph. Berger's Histoire de l'Écriture, p. 217.

R Compare also the sign from the Lion of Abydos, Enting, Col. 7.

¹⁷ Compare also Enting, Col. 7 b. 18 See Indian Studies, No. III. p. 69.

developed. Its top line has been lengthened considerably and the downstroke has been shortened and bent in order to avoid a collision with va and ra. The steps, which led to its formation, are therefore (1) \vdash or \not (2) \neg , (3) \neg .

With respect to the Derivative Signs, my views are as follows: -

(1) The aspiration is expressed by a curve, by a hook or by a straight stroke, which latter, as the case of bha shews, is a cursive substitute for the curve. At the same time the original form of the unaspirated letters is sometimes slightly modified. The curve appears on the right of the ga in gha (No. 3, Col. IV.) at the top of da in dha (No. 4, Col. IV. a) without any change in the original forms. In bha (No. 2, Col. IV. a) it is attached to the right of ba. the wavy top of which is converted into a simple straight stroke, from the middle of which the vertical line hangs down. The same sign shews also frequently in the Asôka Edicts a hook for the curve and as frequently a cursive straight stroke (No. 2, Col. IV. b), slanting downwards towards the right. The hook alone is found in tha (No. 20, Col. IV. d),18 which has been derived from the preceding form of ta (No. 20, Col. IV. c) by the addition of a hook opening upwards. The straight stroke alone is found, on the left of the original letter and slanting downwards, in jha (No. 7, Col. IV.), and likewise on the left but rising upwards,20 in pha (No. 15, Col. IV.). In tha (No. 20, Col. IV. a) the stroke of aspiration appears on the right. It has the same position in chha (No. 16, Col. IV.) and in dha (No. 4, Col. IV.c). But in the former sign the small slanting stroke at the top of the vertical on the left has been straightened and combined with the sign of aspiration into a bar across the vertical. In dha the whole head of the unaspirated letter (No. 4, Col. IV. b) has been flattened down and reduced to a single stroke, which together with the sign of aspiration forms the bar across the top of the vertical.

With respect to the origin of the mark of aspiration I can only agree with Dr. Taylor, who explains it as a cursive form of ha, The Alphabet, Vol. II. p. 260, note 1. The manner, in which it was attached in each particular case, seems to have been regulated merely by considerations of convenience and the desire to produce easily distinguishable signs. The way in which the hook or curve of aspiration has been used in the Brâhma Alphabet is analogous. It is added, too, very irregularly sometimes to the top, sometimes to the middle and more frequently to the foot of the letters, where properly it ought to stand.²¹ If the Kharôshthî characters never shew in the last mentioned place, the cause is no doubt the desire to keep the lower ends of the signs free from encumbrances, as has been noticed above.

- (2) The device for expressing the lingualisation in ta (No. 20, Col. IV. b-c) and na (No. 13, Col. IV. a) is very similar to that sometimes used in the Brâhma Alphabet, in order to indicate the change of the varga or class of the letter. A straight stroke, added originally on the right, serves this purpose in the Bhattiprôln la, in the Brâhma na, na and na. The case of the Kharôshthi ta has been stated above in the remarks on the representatives of Taw. With respect to na it is sufficient to point out that it has been developed from the na No. 13, Col. III. b, by a slight prolongation of the right hand stroke. The case of the lingual da (No. 4, Col. IV. b) is doubtful. Possibly it may be derived from an older dental da, like that in No. 4, Col. I. a, by the addition of a short vertical straight line on the right, which coalesced with the vertical of the da and thus formed the sign with the open square at the head. But it is also possible that the Aramaic alphabet, imported into India, possessed several variants for Dalelh, and that the heavier one (No. 4, Col. I. b) was chosen by the Hiadus to express the heavier lingual da, while the lighter or more cursive one was utilised for the dental ds.
- (3) The origin of the remaining two Kharôshthi consonantic signs, the palatal na (No. 13, Col. IV. b, c) and of the anusulus in man (No. 12, Col. IV.) has been already settled by

¹⁹ The sign in the table is really the.

²⁰ There are also examples, in which the stroke is made straight ²² See Indian Studies. No. III. pp. 63, 73.

²¹ See Indian Studies, No. III. p. 73 f.

Mr. E. Thomas. He has recognised that the palatal $\tilde{n}a$ consists of two dental na, joined together, and it may be added that in the Asôka Edicts sometimes the right half and sometimes the left half is only radimentary, as shown by the two specimens given in the Table. He has also asserted that the trace in is nothing but a subscript small ma, which proposition is perfectly evident in the form given in the table, less apparent, but not less true in other cases, for which I must refer to Plate I. of my Grandriss der indischen Palæographie.

(4) As regards, finally, the Kharoshthi vowel system and the compound consonants not given in the accompanying table), I can only agree with Mr. E. Thomas, Prof. A. Weber and Sir A. Cunningham, that they have been elaborated with the help of the Brahma Alphabet. Among the vowel signs the medial ones have been framed first and afterwards only the initial I. U, E, O (No. 1, Col. IV. a-d). They consist merely of straight strokes, which (1) in the case of i go across the left side of the upper or uppermost lines of the consonant, (2) in the case of u slant away from the left side of the foot, (3) in the case of e stand, slanting from the right to the left, on the top line of the consonant (mostly on the left side), and (4) in the case of o stand below the top line (compare the, No. 20, Col. IV. d) or slant away from the upper half of the vertical as in O. The position of the four medial vowels thus closely agrees with that of the corresponding signs of the Brahma Alphabet, where i, e and o stand at the top of the consonants and u at the foot. This circumstance alone is sufficient to raise the suspicion that there is a direct connexion between the two systems of vowel-notation. And the suspicion becomes stronger, if some further facts are taken into consideration. In the Brâhma Alphabet of the Aśôka Edicts the medial e and u are mostly expressed by straight strokes. The medial o, too. consists in several cases, e. g., in Delhi Sivalik Pillar Edict, VII. 2, l. 2 (nigohāni) of a straight bar across the top of the consonant, and has the same form frequently in the Bhattiprôlu inscriptions as well as in somewhat later documents. Again the medial i of the Girnâr version is expressed by a shallow curve, which in many instances is not distinguishable from the straight line of the medial a. Thus even the oldest Brahma documents furnish instances, in which all the four vowels, expressed in the Kharôshthî by straight strokes, have exactly the same form, and it is very probable that in the ordinary writing of every day life these cursive forms were in the case of o and i much more frequent than the Edicts shew, as well as that they go back to earlier times than the third century B. C. If, finally, the fact is added, that the Kharôshthî, like the Brâhmî considers the short a to be inherent in all consonants and does not express it by any sign, it becomes difficult to avoid the inference, drawn already by Prof. Weber, that the Kharûshthî system of medial vowels has been borrowed from the older alphabet.

The marking of the initial I, U, E, O (No. 1, Col. IV., a-d) by A plus the corresponding medial vowel-sign is, of course, an independent invention of the framer or framers of the Kharôshthî, and probably due to a desire to simplify the more cumbersome system of the Brâhmî, which first developed the initial vowels, next used them in combination with the consonants and finally reduced their shapes in such combinations to simple strokes and curves. Similar attempts have been repeatedly made on Indian ground. The modern Devanâgarî has its and and since the thirteenth or fourteenth century, the modern Gujarâtî has its e, ai, o and au, and the Tibetan alphabet, framed out of the letters of the Vartu seventh century A. D., expresses even I and U by A plus i and u. These examples show that the idea at all events came naturally to the Hindus and that it is unnecessary to look for a foreign source of its origin.

- (5) The rules for the treatment of the compound consonants again agree so fully with those of the Brâhmî, especially with those adopted in the Girnâr version, that they can only be considered as copies of the latter.
- (i) Double consonants like kka, tta, and groups of unaspirated consonants like kkha, ttha, e.c. are expressed by the second element alone, except in the case of two nasals of the same

class, where the first may be optionally expressed by the anusvára as in anna or ana. Three times, however, a double ma is used in the word samma (samyak-pratipatti), Shâhbâzgarhî Ed. IX. 19, XI. 23, and XIII. 5.

- (ii) Groups of dissimilar consonants are expressed by ligatures of the signs except if the first is a nasal, for which the anusvára is used throughout.
- (iii) In the ligatures the sign for the consonants, to be pronounced first, stands above and the next is interlaced with the lower end of the first, except in the case of groups with ra, where ra is almost invariably placed below. The forms of the Kharôshthî ligatures are shaped exactly like those of the Brâhmî and, like these, illustrations of the grammatical term sanyultākshara "a conjunct consonant." The neglect of non-aspirates, preceding aspirates, and of the double consonants, with the exception of the nasals, which can be marked without trouble by the anusvāra, is, as already pointed out, a clerks' trick and the same as that used in the Brâhmî Lipi. The treatment of ra in groups is closely analogous to that adopted in Girnâr, where this letter or its cursive representative always occupies the same position, whether it must be pronounced before or after the consonant with which it is combined. There is, however, this difference that in the Girnâr Brâhmî ra stands always at the top and in the Kharôshthî invariably at the foot. The one writes, e. g., rta for rta and tra, and the other tra both for rta and tra.

These remarks at all events suffice to shew that a rational derivation of the Kharoshthi from the Aramaic of the Akhæmenian Period, based on fixed principles, is perfectly possible, and the attempt has this advantage that it shews some letters, as da, ka and ta, to be closely connected with Mesopotamian forms, which à priori might be expected to have been used by the writers of the Satraps, ruling over the extreme east of the Persian empire. If the ruins of the eastern Persian provinces are ever scientifically explored and ancient Aramaic inscriptions are found there, forms much closer to the Kharoshthi will no doubt turn up.

The third and last point, the existence of which has been indicated above, furnishes perhaps the most convincing proof for Dr. Taylor's theory. It is simply this, that Mr. E. J. Rapson has discovered of late on Persian silver sigloi, coming from the Panjab, both Khardshthi and Brahma letters. Mr. Rapson was good enough to shew me specimens, belonging to the British Museum, during my late visit to England, and I can vouch for the correctness of his observation. I think, I can do no better than quote his paragraph on the Persian coins in India from the MS. of his contribution to Mr. Trübner's Grundriss der Indo-Arischen Philologic und Aterthumskunde, which will appear in Vol. II. Section 3:—

"(5) During the period of the Achæmenid rule (c. 510-331 B. C.) Persian coins circulated in the Pañjâb. Gold double staters were actually struck in India, probably in the latter half of the 4th century B. C. [Babelon, Les Perses Achéménides, pp. ix., xx., 16, Pl. II. 16-19; 27.] Many of the silver sigloi, moreover, bear countermarks so similar to the native punch marks²⁵ as to make it seem probable that the two classes of coins were in circulation together; and this probability is increased by the occurrence on sigloi, recently acquired by the British Museum, of Brâhma and Kharoshthi letters."

This appears to me sufficient to establish the conclusion that the Kharôshthi did exist in India during the Akhæmenian times and did not originate after the fall of the empire. At the same time we learn that before 331 B. C. the Kharôshthi and the Brâhma letters were used together in the Panjâb, just as was the case in the 3rd and 2nd centuries B. C. (see above).

In conclusion, I may offer a suggestion regarding the name of the script of Gandhira. The Buddhist tradition derives the term Kharôshthi from the name of its inventor, who is said to have been called Kharôshtha or "Ass'-lip." I am ready to accept this as true and historical,

²⁴ There is only one exception in the Manschra version, Ed. V. 24, kartabhikare.

²⁶ Babelon, op. cit. p. xi., attributes these countermarks to other provinces of Asia.

because the ancient Hindus have very curious names - apparently nicknames. Thus we find wiready in the Vélas three men, called Sunahsepa, Sunahpuccha and Sunolaigula, i. e., "Dow's tail." and Sunaka or "Little-Dog" is the progenitor of a very numerous race. Again a Kharljaighaor "She-Ass'-Leg" is, according to a Gana in Panini's Grammar, likewise the father of a tribe or family.26

March 31st. 1895.

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.I.E., I.C.S.

(Continued from p. 298.)

Lime. — Spirits fear lime perhaps because lime is an early medicine. In Gujarât, lime is valued as a medicine by native physicians, and is considered a cure for colic. 1 Amir 'Ali the Thag, allowed a woman to put quicklime on his temples to cure a headache.2 The Ratnagiri Marathas, after bleeding, use lime and molasses to staunch the blood.3 Hindus eat lime with betelnut and leaves to quicken digestion. In Dhârwâr, if much blood passes from flooding, some cement from an old building is finely ground and mixed in water. The mixture is kept in a pot for some hours, until the heavier parts are deposited at the bottom. The clear water on the top is then given to the woman to drink, and in two or three days the flood stops. The Dakhan Chitpavans, at their weddings, touch the grindstone with lime in five places.6 In Gujarat, a woman in child-bed is sometimes surrounded by a line of white-wash.7 The Chino-Japanese spread on the coffin a layer of lime, sand and red-earth mixed with water or beer.8 Compare, in a fatal case of cholera the coffin should be lined with chloride of lime.9 The Velalis, a class of Poona Vaisyas, at their weddings. when they go to the boy's house, wave round the girl a plate filled with water, turmeric. and lime.10 Lime is used in preparing the sect mark of the Gôkalasthas, Saivas and Sâktas.11 The Motus of new Guinea use lime in chewing betelnut,12 and the Chibchas of Central America eat the cocoa-leaf with earth like lime.13

Lifting. — The object of lifting appears to be to lessen the risk of spirits entering the person lifted. So among the Pâtanê Prabhus of Bombay, when the bridegroom is bathed, his maternal uncle, throwing a cotton sheet over him, lifts him shoulder high and sits with him on the threshold, where four married women hold a shawl over the bridegroom's head and thrice drop rice into the shawl.14 Among the Pâvrâs of Khândêsh, as soon as the wedding is over, the married pair are raised on the shoulders of their friends, with dancing and music. 15 The Kûmâthîs of Thanâ raise the bride and bridegroom on their shoulders and dance.16 The Nakri Kûnbis of Thana lift the bride and bridegroom on their shoulders, and dance keeping time to music.17 The Sagar Gavandis, a class of Shôlapur masons, lift the boy and girl and dance.16 As soon as the wedding is celebrated the Khonds dance, taking the bride and bridegroom on their shoulders.19 The Orlons carry the bride and bridegroom and set them on a curry stone.20 At the crowning

^{* [}For a discussion on opprobious names in modern India and the reasons for giving them to children, see my Dissertation on the Proper Names of Panjabis, 1883, p. 22 ff.; and on nicknames, p. 32 ff. Opprobrious names are nowadays given, roughly speaking, to scare away harmful spirits, and it appears to me to be likely that this custom, which we now find existing universally among the modern Indian peasants, has a history stretching back to Vedic times. - ED.

of Kuyuk Khân, Emperor of the Târtârs in 1246, he and his wife were put in a chair and lifted.21 The king and queen of Navarre, after being anointed, were lifted.23 Among the Tentonic and Gothic tribes, the chief or king on whom the election fell was borne on a buckler by the leading men of the tribe.23 Among the Natchez of the Mississipi, at the harvest or new-fire festival, in the evening, the unleavened bread was held up and presented to the setting sun.24 Compare the elevation of the Host in Roman Catholic Churches: the Panagia or all hely, a monastic feast at which a triangle of blessed bread was elevated and shared by all in honour of the Blessed Virgin Mary: the raising of the Sacramental bread by the Byzantine Christians.25 Compare also in drinking a toast the raising of the glasses and the carrying shoulder high of the chief guest or champion. In Scotland, till 1820, it was usual to lift the bride over the threshold of her husband's house.26 In Manchester, in 1784, the men used to lift the women on Easter Monday, and the women the men on Easter Tuesday. One or more took hold of each leg and one or more of each arm near the body, and thrice lifted the person in a horizontal position.27 In 1825, lifting was still common in North England.28

Liquor. - Liquor is both a spirit-scarer and a spirit home. Liquor drives away weariness, cold and faintness. It heals wounds. It soothes inflammation. For these reasons liquor is a leading spirit-scarer. In East Africa, after his return from the haunted hill Kilimanjaro, Mr. New was sprinkled with a special ceremonial liquor that scared evil spirits.29 The widespread practice of libation, that is, of the spilling of drops of liquor before drinking. has its root in the scaring power of liquor. Parsis sprinkle liquor to scare the Evil Eye and other baneful influences. The Zend Avesta says30:-"The least offering of Haoma, the least praise of Haoma, the least mouthful of Haoma is enough to slay a thousand demons. All evil done by demons vanishes at once from the house of the man who serves Haoma, who praises Haoma the Healer." Again³¹:-"I am not a thief, says Haoma, I am Haoma the holy who wards off death." So in the Samaveda, 32 Soma is the chaser and slaughterer of enemies, the destroyer of the wicked, the helper against fiends, the demon-slaver. Though in the higher phases of the religions of Greece and Rome, the libation was believed to please rather than to scare, the earlier feeling remains in the case of thunder, when the Greek and the Roman poured cups of wine on the ground to avert the omen.33

Again, liquor inspirits. It causes gladness and laughter: as Horace34 sings: -- "Wine adds horns to the man of humble means." In wine there is Truth; in wine there is Wit. So the enthusiast Brahman and Persian Soma and Haoma worshippers held liquor a god or. in the less extreme form, believed that in liquor dwelt a guardian or kindly ancestor. "If a man," says the Zend Avesta,35 " handles Haoma tenderly like a little child, Haoma enters into his body for health. All other intoxications carry with them Aeshma or wrath of the murderous arm: the intoxication of Haoma goes with holiness and joy: the intoxication of Haoma is lightsome." Again he sings36:-" Haoma, give me thy drunkenness in exchange (for my praise). Let thy drunkenness enter into me and brighten me. Thy drunkenness is lightsome." So the Brahman priest37 drinking from the Soma cup; says: - "This is good, this is a host of goods. Here is good, here is a host of goods. In me is the good, in me is a host of goods." Sôma was a god brought from heaven by Gayatri. According to the Sámavéda,39 Sôma was a god pressed out for gods. By Sôma Indra defeated the demons.40

The drinking of Sôma⁴¹ gives immortality. So in the Zend Avesta, ⁴² Haoma is a god, whose share of the sacrifice is the jaw, the tongue, and the left eye. "Cut quickly," ⁴³ the poet cries to the sacrificer, "his slice for the share of the mighty Haoma, lest he pen thee in the bowels of the earth." Similarly, the Aztecs of Mexico held drunkenness to be the working of the wine god. ⁴⁴

But liquor is dowered not alone with happiness: from drink come rage and madness, as well as kindliness and joy. Hesiod (B. C. 800) says : - "Dionysos gave grapes to men, a source of joy, a source of sorrow. The wine god, the freer from care, is also the slaver of souls.45 According to the Aitariya Brahmana,46 the inebriating quality of Sôma arose from its being licked by the fiend Dîrghajihvâ, Lady Long Tongue. It follows that. though mainly a guardian home, a bringer of joy and health, liquor, like other guardian homes, is apt to be invaded by houseless ill-minded spirits, whose evil influence, passing into the drinker, causes madness and grief. For this reason every care has to be taken in the making, keeping, drinking, and consecrating of wine. Among the early Romans, when the new wine or mustum was tasted, a libation was poured to Meditrina and Jupiter with the prayer that the wine might have health-giving power.47 So the Bacchantes and maddened comrades of the wine spirit were, like their pine cone and their human organs, less inspired by the god than the guardians of the god, taking into themselves as scapes the unhoused swarms that might otherwise make their way into the Wine Spirit, dear to thirsty demons. In Europe. as late as the seventh century, at some festivals, the people called on the name of Bacchus and simulated a Bacchic frenzy while treading the grapes. 48 Similarly, in a Somerset home when the malt is steeped for a brew, on the mash are drawn two hearts with a criss-cross between them to keep the pixies or fairies from spoiling the drink.49 In Scotland (1604), in the brewery at St. Andrew, a live coal was thrown into each of the vats to keep off the fairies.50 In Hereford, Kent, and other parts of England, in 1690, a bar of cold iron was laid on ale barrels to keep the beer from being soured by thunder. 50a So, in Naples, when the wine is ready, the barrel and the wine wagon and the tavern have all to be saved from the Evil Eye and other harmful influences by hanging them with horns. So, in churches, the crossing of the chalice with the thumb passed under the two front fingers, incense, lights, bells, and, perhaps, the lifting, all help to the guarding of the sacred wine.51

Though, in India, liquor has ceased to be sacramentally drunk to excess, and, except on special occasions, has ceased to be worshipped by orthodox Hindus, the worship and the excessive religious drinking of liquor remain the leading rites of the Vâm or Lefthand sects. Liquor is the essential article in the worship of the followers of the left path, Kâols, Sâktas, Vâms and Aghôrs. The Sâkta holy books tell how Liquor, in the form of a Virgin or Kumârî, rose from the churning of the ocean. The lady was smiling, red-eyed with wine, high-breasted, many-armed, covered with jewels. The gods and the heavenly host praised her. From drops which fell from her cupsprang hemp, spices, sweet-canes and palms, all plants and trees in whom lives the divine ferment of wine. Liquors are of two classes: madya, or the sweet, which bring pleasure and freedom from re-births, and swa, breath or spirit, that is, the distilled, which save from sin and give learning and power. Through the blessing of Sañkara, that is of Mahâdêva, those who drink liquor, the giver of the greatest happiness, gain unending joy. Even by the gods, say the Vâm books, liquor is enjoyed: it ever shines: it is an enduring delight. The sight of liquor frees from sin: its fumes have the merit of a hundred sacrifices. In the divine ferment of liquor the All-soul passes into the partaker, life is large, self bursts its bonds and

swells into deity. The devotee drinks the sixteen devotional cups, meditating on Mahâdêva the World-spirit, and repeating "I have in me the essence of Siva, the ferment of life. For life is Siva and Siva is life. This my largeness of life is 'Siva himself." So the men, who take part in the Vâm rites, are gods or Mahâdêvs, and the women goddesses or Maheśvaris. The aim of the higher Hindu religion is to get rid of the bonds of self, of the dreaded chain of re-births. By two courses liquor leads to this desired end. The inspiration of liquor consumes the barriers of Self, and liquor freely drunk brings unconsciousness, when the goadings of desire are at rest, and Self is lost in the fullness of peace. In death-like drunkenness, says the Âgam, all gods, that is, all passions, appetites, and desires, are at rest. The unconsciousness of the heavy-laden drinker is môksha, absorption, the longed-for passing of Self into the All which knows not re-birth. 52

The Buddhists of Tibet, in their half Hindu services, offer in a human akull to the Maharânî or Queen, that is to the goddess Durgâ or Kâlî, a sacramental cake made of black-goat's fat, blood. wine, dough and butter.53 Probably, because of the strong Musalman element in the brotherhood, the sacrament of the Thags, or Indian high-way stranglers, in honour of Durga or Kalt. was sugar, not liquor. Still, in certain religious ceremonies, the Thags drank spirits with the formal invocation of Dada Dhira, a famous Thag leader, with the promise that, if their coming venture succeeded, they would drink or they would spill spirits in Dâdâ Dhîrâ's honour and memory.54 Among Ratnagiri Kunbis, when a man dies without heirs, at the close of the funeral. the mourners retire from the pyre, send for liquor, and all sit and drink. Their object is to help and hearten the unhoused spirit. They do not know how this drinking is to help the dead. They have forgotten the earlier belief that the spirit goes into the liquor and through the liquor passes into and is housed in the partakers. The Parsis have remained stauncher to liquor worship than the higher class Hindus. Though liquor is not drunk in the fire temples, liquor drinking forms part of almost every Parsi ceremony. On New Year's Day (September-October). liquor is consecrated with milk and fruit. The consecrated liquor should be drunk in memory of God. It makes the partaker delighted and light-hearted. It shows forth to the drinker his place in paradise.55

In Western India, in making the divine or guardian Liquor, the following rites are observed. In the Panch Mahals in East Gujarat, stills are kept and worked by people of three classes, Bhîls, Kalâls, and Pârsis. In making liquor for any special sacrifice, about a fortnigh before the appointed day, the Bhils fill great earthern pots with mhawa (Bassia lalifolia) flowers. They set on a brass platter rice, three pice, a silver coin, a cocoanut, ground turmeric, and an earthen lamp. The sacrificer five times dips his thumb tips in turmeric and marks the ground in front of the pots with small yellow circles, and, on the turmeric circles, drops a few grains of rice. He scatters rice on the ground, and lies on the ground worshipping Mother Earth. He throws rice, and prostrates to the sun and moon. He five times marks one of the pots with thumb marks of turmeric and scatters rice over the pot. He waves the brass platter five times round the pot and worships the platter. On the day chosen by the astrologer, after the mhawa flowers have been steeping for a fortnight and are ready for distilling, a hole is dug and an oven built. When the first liquor, which is called earth-cleansing or daulpakhav, is ready, a Medium, or Bharwa, is called, and some rice and pulse cakes and five fowls are brought. The headman waves the brass platter round the pot, marks the pot with turmeric, and throws rice over it. The Medium, becoming possessed, shakes and tosses gasping :- "I am Ind Raja. You will prosper. I accept your sacrifice." The fowls are killed, and some of their blood is sprinkled on the fire in the oven. Fire is taken out of the oven and laid in front of the still. The people sit round and throw into this fire pulse and rice, pieces of cake, the hearts of the five fewls, and clarified butter. Each pours some of the new liquor into the fire. They drink the rest of the first jarful, roast the fowls and eat them with the cales. Sometimes, for a special

54 Siceman's Rimbsectina, p. 87.

²² MS. Translations of Sakti Bifual, by Mr. K. Raghundthit. Waddell's Duddlison in Tibet, p. 365.

offering to a god, the Bhils make kuvari, that is, pure or virgin liquor. The rites are the same as those noted above, except that the distillers must bathe and wear newly washed clothes before they begin the work of distilling.

On every Dasahra day (September-October), and also when they first use a new still, the head Kalii pours a little of the first liquor into the oven. He kills a goat, dips his open hands in the goat's blood, and marks each side of the oven with three bloody hands. He drops part of the goat's liver into the fire, and with red-lead, marks finger-tip circles on the bloody hands. He breaks and distributes a cocoanut with some of the new liquor. When Parsis first use a still. the owner plasters with cow-dung a space about two feet square in front of the still. He marks the oven with a trident, takes out some of the fire, lays it on the plastered ground, drops into the fire a little camphor, sandal-wood, benzoin, and frankingense. He sets close to the fire a highted ghi lamp and an incense stick, and prays: - "Oh Dêvî, prosper my trade. May the hanor be good. I give you your sacrifice." He pours a little of the new liquor on the plastered ground and into the fire, and scatters a few drops in each of the four directions. A goat is brought and a cup of the new liquor is poured on its back from head to tail. "Dêvî," says the still-owner. "I bring your sacrifice. Be pleased to accept it." The goat shakes itself in sign that it is accepted. Its head is struck off, and at the same time a cocoanut is broken. Some of the goat's blood is caught in a cup, and poured into the oven and over the still, and a little of the liver and of the cocoa kernel are burned in the fire outside of the still. The fiesh of the goat is distributed among the owner's servants and others.58

The chief devices practised by Bombay liquor-sellers to guard the guardian Liquor are Among Parsis, the nailing on the shop threshold of a horse-shoe, especially of a horse- shoe found on a Sunday or new-moon day, over which, in some cases, charms have been repeated. Failing a horse-shoe, cross nails are driven into the threshold. Morning and evening, the smoke of benzoin is fanned about the room, especially at the corners. And daily, especially on Sundays and new-moon days, a priest comes and sprinkles the shop with salt water, repeating texts for the scaring of evil spirits. At new moon a coccanut is broken and the water sprinkled about the shop and entrance, and sugar is eaten by the shopkeeper. Powdered rice is put into hollow tin rolls bored with holes in the lucky figures of fish, flowers and new moons, and these figures are stencilled in the yard and at the threshold. In the spirit-haunted twilight, garlands of iesamines are hung to the shop lamp, round the tops and the taps of the casks, and over the bottles. The Hindu Bhandari uses all these precautions, except the sea-water and the lime figures. Instead, he sprinkles liquor in the shop-corners, drops some into the fire, and throws the rest in front of the door to keep away or to please evil spirits. He also hangs a spirit-scaring lemon from the roof. Christian Bhandaris have the horse-shoe on the threshold and the jessamine garlands. They also keep cocoa-palm leaves at the door. A man carrying toddy almost always has a piece of a palm leaf in the jar and some palm sprays in his hand. 57 In North Italy, and formerly in England, a branch of pine is the tavern sign to keep off souring and other evils. Good wine, in which the guardian influence is specially strong, alone needs no bush. In a Scottish house, after a death, unless an iron nail or needle is dipped into it the whisky turns white.58

In drinking, or after drinking, the risk is great that liquor-loving evil influences will pass into the drinker. The Hindu or Indian Musalmân, who is found bleeding or torn from a drunken fall explains:—"I had been drinking in the town but was sober. On my way home I was passing under a haunted tree. The evil spirit who lives in the tree smelt the liquor from my breath, entered into me, and, playing with me, threw me down, cut me, and left me senseless." So, the North Englishman, who, after a drink, loses his way, is pixey-led. To save the drinker from the assaults of thirsty spirits, the classic Greek and Roman sprinkled wine, as he dropped crumbs of bread, for the evil spirits. Over the gnests he hung the evil-

scaring rose and let showers of rose leaves fall on his guests. 61 He crowned the drinkers with never-fading spirit-proof ivy, he protected their fingers with madness-scaring amethyst, he armed the cup with guardian gems and cameos.63 The Greeks crowned the cup with garlands, the Catholic priest crosses the cup, the Jew blesses it, and the Roman of the early empire, with a similar spirit-scaring or housing object, graved its outside with pleasing adulteries.63 Saint Chrysostom (A. D. 398) seems to recognise the principle when he says: - "Take holy oil, and thou wilt never suffer the shipwreck of drunkenness."64 In the Eastern Church, the Sacramental cup contains a portion of the consecrated bread.55 The early English custom of dropping into wine pieces of toast is the origin of the phrase the toasting of beauties and honoured guests.66 This toasting of beauties, of honoured guests, of the king or earthly guardian, and of the deity or heavenly guardian, is based on the rule that all in honour, whether child, guest or guardian, want special protection, since they are particularly open to the intrusion of evil spirits.

Health-drinking is a complicated rite. The Middle-Age Skandinavian practice of drinking the health of Christ, the present South Slav or Balkan drinking to the ancestral guardian or Slawa, and the Parsi drinking of the toast of Zoroaster, seem to have their origin less in the hope of housing the guardian than in the belief that the drinker becomes a scape, taking into himself evil influences, which, if not absorbed by him, might enter into the Name, and so annoy the being whose health is drunk. This view finds support in Firdusi's (A. D. 1000) statement that, when the ancient Persians drank in memory of King Qaus, they prostrated and kissed the earth.67 The same worshipful feeling is the main element in the English practice of drinking the Health of the Queen, the bride, the newly christened babe, the hero of the birthday, absent friends, the dead. The silent toasting of the dead has passed through many phases. The drinking at funerals was originally to scare from the living the dreaded spirit of the dead and other evil spirits; then to scare evil spirits from the corpse; then to tempt the spirit of the beloved dead to house himself in some one of his relations, as the Roman son received in his pious mouth the last breath of his dying parent. This view of ceremonial drinking explains how, among many nations, at certain seasons and on certain occasions, drinking, that is, drinking to excess, is a duty and a self-sacrifice, the drinker taking into himself the evil influences, which, but for him and his comrade scapes, might cause general mischief. The spilling of wine in christening a ship has the early object of scaring the spirits of ill-luck, probably to empty the ship of the spirits that took shelter in her when she was building, and make the ship ready to receive the spirit of the guardian deity or saint in whose name and under whose charge she is to be launched. Like the new-built ship, the field is sprinkled to purge it of the demons of barrenness and blight, the sea to scare the storm-fiend, the river to drive away the devil of drought, military standards to put fear and panic to flight, and fishing boats on June 29th, the day of the great fisher St. Peter, to get rid of fish-scaring influences. 48 The experience, that Truth and Wit are in Wine, that Wine is the Opener, the Revealer, together with the belief that in wine ancestral spirits pass into the drinker, explain how, among Greeks, Persians, Carthaginians, Scythians, Thracians, Germans, Celts, and Iberians, important questions were settled over wine. What was fixed over wine was more inviolable than their sober resolutions.69 Among the Babylonians, the drinking of Belshazer before his thousand lerds when the writing appeared on the wall was ceremonial or religious, a loving cup to the

good Daimon.⁷⁰ In Mangaia, in the South Pacific, before the priest becomes possessed, he drinks an intoxicating liquor, and, in the frenzy that follows, his wild words are taken to be the voice of God.⁷¹

On the bright third of May, on the August full moon, and on the day sailing vessels put to sea. Gniarat sea-farers throw into the sea milk, flowers, cocoanuts and liquor.72 At a Mongol review. Bibar (1592) saw the Khan and those about him sprinkle spirit made from mare's milk towards the standards.73 Among the Red Karens, of the highlands of East Burma, in a yearly firstival, when the spirit's house is renewed, fermented liquor is drunk in excess by all, gongs and cymbals are sounded, drums boom, drinkers shriek, dogs howl, and matchlocks are fired. 74 In New Guinea, women who wish to be exorcised of the spirit of barrenness meet in the god-hut and are sprinkled with rum by the priest, while young men fire guns and brandish swords to scare the demon.75 In the Peru initiation to manhood the relations scourged the lads and the lads presented the scourgers with liquor, apparently with the sense that the whipping drove out the boyish spirit of fear, and the spirit of fear, entering into the liquor, passed into and was prisoned in the whippers. 76 In the feast of the Lord Inca, young Peru girls carried vases of liquor and took them to the temple of the Sun.77 The Spartans bathed new-born infants in wine.78 A (freek in love sprinkled with wine the door of his mistress' house.79 The merits of a night-cap or final glass of liquor were known to the Greeks and Romans, who, before breaking up a party, poured wine to Mercury, the sender of sleep and pleasing dreams.80 The Greeks offered wine at the beginning and end of a voyage or journey, before going to sleep, when they entertained a stranger, and at almost every sacrifice.81 The Greeks washed the dead with warm water and wine.62

The Hebrews poured wine over an upright stone or el, gathered the wine, and gave it to barren women to secure offspring, that is, to scare the haunting spirit of barrenness.87 In seventeenth centary England, a drink of herbs worked up off clear ale over which Masses were song, and in which garlic and holy water were mixed, was used to cure the fiend-sick.84 In eighteenth century England, the Sacramental Wine, and in Ireland and other Catholic countries, the rinsing of the chalice scared fits, whooping-cough and other childish spiritseiz ires. \$4a On festival eves parishoners met in church-houses or church-yards and had drinking bouts.95 According to the German legend, Dame Gauden's doggie was scared by making the fermenting beer pass through an egg-shell.86 In eighteenth century England (1750), the bride and bridegroom, on going to bed, were given sack-posset, and again when they awoke.87 In England, the wassail bowl used to be drunk at Christmas. This was probably a fore-Christian rite. The early Northmon liked nothing so much as caronsing ale. The master used to fill a great bowl and pass it round, first drinking out of it himself.88 The wassailing bowl was also an old Saxon institution. It resembled the Grace-cup of the Greeks and Romans. 99 The Norse god Odin is said to have taken no nourishment but wine. 90 The northern nations. in addressing their rural deities, on every invocation, emptied a cup in their honour.91 Compare about the middle of the twelfth century, on the island of Rugen, in the South-West Baltic, the German and Slav god Snanto Wib or Holy Light, held in his right hand a horn.

This horn the priest, at the end of the harvest, used to fill every year with new wine. He examined the horn when the next year's crop was harvested. If the liquor in the horn had sunk, the priest foretold a bad harvest; if the horn was still full, the harvest would be good. At the harvest festival the priest poured out the old wine at the foot of the image: filled the horn afresh, presented the horn to the god, and then himself drank it. After drinking, he addressed the crowd in the name of the god. The people kept orgy during the rest of the day to please the god. 92 On St. Peter's Day (June 29th), in Yorkshire, fishing boats are dressed with flags and streamers, their masts are painted, and their bows sprinkled with good liquor.93 That to the Greek liquor was a guardian or fiend-scarer is shewn by the Tap-barrel Day in February-March, when the wine of the last vintage was tasted, being the day of the guardian or Good Daimon. 4 And, again, in the Bacchic Mysteries, when a consecrated cup, handed round after supper, was received with shouting as the cup of the Agathodaimon or Good Spirit.95 That the object of drinking is to scare or to house spirits and so drive away disease is shewn by the offerer's speech at the Roman Meditrinalia or New-wine Festival :- "I, old, drink new wine; with new wine my old ailment I cure."96 It is also shewn by the Saxon name "wassail," that is, wax-health, and also by the Romans calling a drink salus or health, as in Plantus "I drink a health to you with full jaws." In Dorsetshire, the Saxons had a god Hail or Health, to whom, in some parts, they drank out of a cup ritually composed, decked, and filled with country liquor.97 At Horbury in Yorkshire (1874), on the second week in February, a gill of ale is served to any rate-payer who asks for it, the amount being charged to the town. These drinks are called Candlemas Gills.98 That drinking was the leading festal rite is shewn by the early English use of the word "Ale" as festival, as in Bridal, that is, the bride's ale, or festival.99 Of the English practice of pouring liquor on the sea to secure good weather. Spenser writes : -

" The mariner on catching sight of home, His cheerful whistle merrily doth sound. And Nereus crowns with cups his mates him pledge around."100

The first month after marriage is the honeymoon, because the people of north Europe ased to drink honey liquor or mead for a month after their chief's marriage.1 In Avondale, in Sterlingshire, during the eighteenth century, great drinking services were held at funcrals These religious funeral drinks continue in the practice of offering cake and wine to mourners at a funeral. The burial service in Scotland is an amplification of the blessing of the cake and wine, which, in former times, was the only religious rite the minister was allowed to perform at funerals.2 In Devonshire (1791), on the Eve of the Epiphany (5th January), the farmer, attended by his workmen, with a large pitcher of cyder, goes to the orchard and there encircling one of the best trees, thrice drinks this toast : -

> " Here's to the old apple tree, Whence thou mayest bud and whence thou mayest blow. And whence thou mayost bear apples enow, Hats full. Caps full, Bushel Bushel sacks full, and my pockete full too, Hazza."

When they go back to the house, the men find the doors bolted by the women, who, whether in wet or dry, let no one in till he has guessed what is on the spit. When the right thing is guessed the doors are thrown open and the guesser gets the prize. If they neglect this custom, the trees bear no apples.3 On the same day (January 6th), in Pauntley, in Gloucester.

to prevent smut in the wheat, farmers meet at the marching of twelve lands. They burn welve straw fires in a row. Round the largest fire they drink cider, and going home feast on cakes made of caraways soaked in cider.4 These beliefs and customs are valuable. They shew that the object of toasting the apple tree, or apple-howling as it was called, and also of toasting the young wheat, was to scare out of the tree and the wheat the evil spirit of barrenness and other ill influences that had established themselves during the months of the sun's waning power. As the twelfth day or close of the great Christmas or winter solstice festival, the Epiphany (6th January), is a fit time to drive off evil influences and ensure full play to the guarding and enriching virtues of the new-born sun. In this case it seems probable that the drinkers were in effect scapes, taking into themselves with the liquor the ill-luck which would otherwise haunt the apple trees and the wheat crop. In the 16th century, at Zurich, at new year time, men used to meet and force one another to take wine.5 In Tibet, on the New Year, first footing and health-drinking are the order of the day: according to the saying :- "The Tibetan New Year is wine, the Chinese paper, the Nepalese noise."6 The fishers of North-East Scotland, besides carrying fire round the boats to bless them on the last night in the year, used (1689) to take meat and drink to the boat-side and sprinkle liquor on the boat. In Scotland, great drinking bouts, called sprees, used to be held on Sundays.8 In 1766, no parish in Ireland was without its place of penance dedicated to a special saint, where, in the morning, the people confessed, did penance, and heard Mass. and in the evening celebrated the greatest debauches.9 In Hungary, at a wedding, the chief of the tribe sprinkles a few drops of liquor on the heads of the couple, drinks the rest of the liquor. tosses the glass pitcher into the air, and lets it fall to the ground smashed. The more bits the more luck.10 Here that the guardian drinker took into himself the ill-luck of the couple is shewn by his letting the glass be broken to pieces. The practice of dashing the glass to the ground after drinking a toast is widespread. It seems to be an extreme form of the toaster's law "No heel taps." that is, no leavings, the sense being that the liquor, through which evil influences should have passed into the toaster, being left in the cup, may serve as a place of refuge for some envious spirit. Similarly, if he heard any unlucky word, the Greek dashed the wine cup to the ground, the sense being that the evil influence in the unlucky word might pass into and harm the wine.11 The Saturnalia, one of the chief spirit-scaring festivals in Rome, was marked by drunkenness. And the December festival at Babylon was known as the drunken festival.12 At Rome, on the feast of St. John the Evangelist, on December 27th, ten days after the old Saturnalia, presents of blessed wine are sent to friends.13

At their public festivals the Dyaks of Borneo never fail to drink to excess.14 In their worship of Sôma or Haoma, the early Brahman and Persian priests drank to excess. This drinking was sacramental. The god was offered to the god; and the god passed into the offering and so into the partaker. So, at the feast of Mithras, the king of Persia was bound to be drunk. 15 Except at sacrificial feasts, the ancient Greeks drank little. At sacrificial feasts it was proper to get drank through the gods dia beore 'ourousbar. To be drunk was termed pebver as if pera to burn after sacrificing, a punning derivation which shewed that the ceremonial drunkenness was due either to the drinker taking the guardian into him or taking into himself haunting influences to guard the guardian. 16 So, heavy drinking marked the Greek harvest home, because as the banquet 6 mg took its name from 6 cos, it was the husbandman's duty to the gods or ancestral field-guardians to get drunk.17 The noisy grave-feast of the early Christians, like

NOVEMBER, 1895.

the inscription to the Divine Manes on the tombstone, was in the main the continuance of the existing worship of the dead.18 More than any part of the feast, drinking housed the dead or lightened his evils by drawing them into the drinker. 19 This explains St. Augustine's (A. D. 398) saying :- "Many drink most luxuriously over the dead, and, when they make a feast for the departed, place their gluttony and drunkenness to the score of religion."20 St. Chrysostom A. D. (350) also admits the religious element in ceremonial drunkenness: - "You will prosper in the new year, not if you make yourself drunk on the new moon, but if you do what God approves.'21 In the sixth century, in England, men spent Christmas and other sacred days in drunkenness and scurrility, both practices doubtless ceremonial.22 It must have been with a ceremonial or housing object that, in A, D, 536, a bishop in Asia Minor made drunk persons who came to him for Bantism.23

The religious, that is, the self-sacrifleing or scape, element in drunkenness is shown by the case of the Russian peasant, who at times thinks it a duty to the church and to the memory of the dead to get drunk.24 Scotland, like Russia, long clung to the early belief in the sacramental character of funeral drinking. "I don't object so much," says the minister to the old Galloway farmer, "to your taking too much at a wedding. But to get drunk at a funeral is without excuse. You must give up whisky at funerals." "Hoot, Meenister, stap whuskey at funerals, Wad you have us burry oor deid with the burrial of a doag?" At a Japan wedding the drinking of rice beer is one of the chief rites.25 In Japan, before the victim criminal is executed, he is given a cup of rice beer.26 The Japanese offering at the yearly god-feast includes a cup of rice beer or saki.27 In every Buddhist monastery in Tibet, within the outer gateway, the image of the place-spirit is worshipped with wine.28 The Lâmas of Tibet also pour liquor to evil spirits.29 Among the Greeks, on the Ninth or Earthen Pot-day, at Eleusis, two vessels of wine were upset as an offering to the infernal divinities,30 In Egypt, in the second century after Christ, in the processions of Isis, a large wine jar was carried.31 The people of Nicaragua, in Central America, had twenty-one festal days dedicated to the gods. These were spent in drinking.32 On certain high days the chief priest of the Zapotces of South Mexico became drunk,33 In Mexico, every religious ceremony ended in general intoxication.34 The Mexicans drank together in closing an agreement.35 The present Mexicans hang liquor outside of their hovels to keep the bees from leaving.36 This practice is in agreement with the widespread belief that, when bees become unsettled, it is because they get spiritpossessed. Among the Peruvians, after marriage, the husband and wife fasted for two days, drank chicha together, and the bridegroom put a shoe on the bride's foot.37 An invitation to drink was the usual salutation among Peruvian friends.38 The Peruvians threw liquor into channels and rivers to bring rain.39 With the same object they set a black sheep in a field, poured liquor over it, and gave it nothing to eat till rain fell.40 The sense seems to be the drought demon went into the liquor and into the sheep, and so the rain was able to fall. The liquor drunk in the Osianic feasts of shells (A. D. 400-800) was a juice extracted from the birch tree and fermented. A liquor was also made of heather. 41 When, at Lammas-

¹⁸ Dean Merivale notices that the first Christians at Rome did not separate thomselves from those who kept to the older faith. They married with non-Christians, they continued the use of the old Roman law, they burnt their dead in Roman fashion, gathered the ashes into urns, and inscribed the usual dedication to the Divine Spirits. tide in August, the Orkney fishermen stopped the harvest of the sea to begin the land harvest. they used to have a ceremonial drink and pray :- "Lord, open the mouth of the grey fish and hold thy hand above the corn."43 In the Edda, the king produced a large horn out of which his courtiers were obliged to drink when they had committed any trespass against the customs of the court.43 In Abyssinia, a formal interview is opened by drinking tedge or mead, that is, honey beer.44 Egyptians. Chinese and Jews drank, and drink, wine at the beginning of an entertainment.45 The younger Pliny (A. D. 100) describes reverted Christians as offering wine and frankincense before the emperor's statue.46 The Brazil boatman begins the day with a dram to frighten the fiend.47 The wassail, that is, according to Hardwick, the wass hael or wax health, bowl of spiced ale, formerly carried with songs by girls on New Year's Eve, with sugar. nutmeg, toast and roasted apples, was, as its name shews, prepared and drunk with the object of securing health, that is, of housing or scaring fiends,48

At the Slaws or Guardian feasts among the Slavs to the south-west of the Balkans, the chief ceremony is toast-drinking. In the evening, after church, relations who have the same ancestral guardian or Slaws come to the house of the man of their brotherhood who is holding the Slawa feast. They salute the host with the words "May the Slawa be propitious." Each receives a glass of wine and a piece of sacred cake. All standard uncover, and the senior guest chants: "We drank before as we liked and needed." He then gives the fresh health, the Guardian, and adds: "We drink now to the honour of the divine Slawa. May the Slaws be propitious to all." Glasses are emptied and filled again. A second guest rises and sings: "The Cross: We drank before to the Slawa, we drink now to the Cross." The glasses are emptied and filled. The third guest chants: "We drink to the Trinity and Pentecost. May the Pentecost feast help all. In house or in field, in water or in wood."49 At their banquets, the modern Parsis drink the following toasts: - The Creater, Zoroaster, the Fire Temple, the Guardian Angels, the Empress, the Host, and lastly with a short prayer and the burning of incense the Dead. The solemn toasts are yads, or reminders; the others are either safeguards, salámati, or healths, tandarusti. 50

Hecateens (B. C. 330) and Plutarch (A. D. 46-106) said the Hebrew god and Bacchus are one. 51 Though in reply it may be urged that no Jew drank wine in the temple, 52 still it is true that the ceremonial and religious use of wine is a marked feature in Jewish customs. At the wedding of the Beni-Isra'll of Western India, the bridegroom holds a glass with wine in it, in which is the wedding ring. The bridegroom drinks half the wine, pours the rest into the bride's mouth, and dashes the glass to pieces on the ground.53 The Jews drank a cup of consolation at or after a funeral.54 Among the Beni-Isra'ils a funeral ends with a drink.55 At the feast held in the synagogue, and at the close of the Sabbath, a cup of wine is blessed and handed round.56 The Jews used wine in their sacrifices, and, like the Egyptians, poured wine on their altars.⁵⁷

MS. Notes, 1895.

M Jahn's Hebrew Commonwealth: Gill's Notices of the Jens, p. 75. Tacitus, about A. D. 100, refers (History, Book v. Chap. V.) to the belief that the Jews worshipped Bacchus, rejecting it on the ground that the worship of Bacchus was gay and the Jews' worship was gloomy. The belief, that the Jews worshipped Bacchus, probably found support in the likeness between Iso, the Greek form of Javah or Jehova, and Euios or Evius, a name of Bacchus, and also between the Hebrew Sabi, glory, and Sabaoth and the Bacchie cry 'Sabaoi' and the name Sabasius. Further resemblances were the vineless ornament in the Jewish temple and the Dionysia-like Feast of Tabernacles. Compare King's Antique Gems, pp. 365-367.

A "stone of drinking" took the place of the ark in the second temple at Jerusalem.58 On the Sabbath of Repentance, the Beni-Isra'îl pours liquor on the ground to satisfy his ancestors. 59 On the first day of the Passover, the Beni-Isra'il drinks wine with prayer. 60 At the Passover. the Jews began by blessing the day and the wine contained in a cup out of which the celebrant and others drank. At the close of the first part of the feast, the cup of wine again went round. A third cup, the cup of blessing, generally mixed with water, followed, and a fourth with the song Hallel, and sometimes a fifth with a great song.61

In most Greek and Roman sacrifices, wine was poured on the victim and on the altar. When with a nod the victim shewed its willingness to be sacrificed, the priest took a cup of wine, tasted it, made the worshippers taste, and poured the rest between the horns of the victim. 62 Among the Greeks, the sales of the dead were soaked in wine, and wine was offered to the spirits of the dead.63 At a Greek feast, the toast was to the gods, corresponding to the Roman formal drinking or propinatio to a god or to the Emperor.64 The Greeks also drank during the feast two loving cups, that is, a cup passed from guest to guest. Of these the first was to the Good Genius or Daimon, that is, Bacchus, the inventor of wine, or, in more mystic phrase. the shewer forth of himself as the wine spirit. As each drank, he called on the Good Genius to guard him from the ill effects of wine.65 The second loving cup was to Charm or Grace. a sacramental cup drunk with the object that the giver of mutual favour and affection might enter into the drinkers.66 After the feast three more religious cups were drunk to Olympian Zeus, the Power of the Air, generally mixed with water, to Heroes, and to the Saviour.67 Sometimes, a fourth cup was added to Health, and sometimes a fifth to Mercury, the sender of sleep and good dreams.68 At their other cups they named and saluted friends; at each cup pouring a little on the ground for the evil spirits.69 When the last cup was drunk they sang a hymn and left.70

The religious use of wine among Christians seems to be a blending of the Hebrew and Greek ideas and practices. The Cup of Blessing, also called the Cup of the Lord, Hebrew in origin, was imported into the Greek Church." At the Agapae or Love Feasts of the early Christian Church, one cup of wine was specially passed round as the cup of blessing.72 That the Christians adopted the sacramental Greek belief that into their love cups the spirits of daimons or guardians entered and so passed into the drinker is shewn by St. Paul's injunction to the Corinthians: "Ye cannot drink the cup of the Lord and the cup of daimons: Ye cannot be partakers of the Lord's table and of the table of daimons."73 Similarly, in the matter of meats, the early idea that the guardian passes into the offering is accepted. All meats are lawful to a Christian, except meats offered to idols.74 This idea is Jewish as well as Greek. The Israelites 75 were ordered to destroy the idolators, lest, if they sacrificed to gods, one should call thee and thou eat of his sacrifice. 76 The horror of eating the sacrifice was that the idol passed into the eater or drinker. So the earlier belief in the spirit-scaring power of articles into which the guardian had passed was continued. Cyril of Jerusalem (A. D. 315-386) says: "In drinking the wine, touch with the moisture of the lips the eyes, the brow and other organs of sense.77 Consecrated bread was laid on the breast of the dead as a charm

against the attacks of malignant spirits: the dead were baptised; the Eucharist was celebrated at the grave, the Eucharist was given to the dead; wine-soaked bread was laid on the dead has; vials of Eucharistic wine were placed in the coffin or grave, and glasses with the graven toasts Drink and Long Life.⁷³ So the sprinkling of wine at graves, like the lighting of lamps, seems to have been mainly to scare evil spirits.⁷⁰ Similarly, one element in the second phase of the Christian Love Feast, the eating and drinking at the graves of martyrs, seems to have been to take into the partakers the evil spirits which haunted the holy ground.⁸⁰ But the main object of the memorial feasts at the shrines of martyrs on their birth-day, that is, on their day of martyrdom, was that the guardian spirit of the martyr might through the food and the drink pass into the feasters.⁸¹ As early as the second century toasts where drunk to the memory of the martyrs, the devout Christian wishing to be helped by the martyr's presence and protection.⁸² At these feasts ceremonial drunkenness seems to have been common.⁸³ Saint Augustine (A. D. 396-426) complains: "The martyrs hate our drinking bouts. Would that we did not persecute them with our cups.' ⁹⁴

Finally, wine is not only a sacrament; it is also a sacrifice. The Egyptians offered wine to many of their gods, pouring out the wine as the blood of enemies who had fought against the gods. So, at the great banquet to gods and demons, the Tibet Buddhist offers country wine called devil-juice and tea called blood. The Egyptians thought that wine made men mad because wine was the blood of their parents. The mystical language of the early Christians regarding the bread and wine of the Supper gave rise to the belief that the drinking of human blood was the cement of their society, as the blood of a child was the bond of union in Cataline's conspiracy. It was not only as representing blood that wine was a sacrifice. The ancient Brahman and Persian Soma and Haoma worshipper believed that Soma the god, who, like the sea, poured forth songs and hymns and thoughts, was offered to himself. The same belief formed part of the mystic rites of the great guardian Dionysos.

Liquor plays a part in two of the leading ever-young elements of the Hindu religion, the losing of Self in the Ocean of Being, and the purifying of Self by the indwelling guardian spirit of self-sacrifice. The part that liquor takes in the philosophic effort to get rid of the trammels and conditions of Self by absorption in the Universal has been illustrated by reference to the Sôma and Vâma literature. The second or practical aim that Self should become the home of the Guardian idea, which the Golden Legend of worshipful self-sacrificing Hindu champions and mothers keeps ever fresh, has through all ages secured to the Hindu religion a leaven of sweetness and youth. The highway to the union of Self with the Guardian spirit of self-sacrifice is the well known Hindu prasadu, that is, pleasing or grace, the offering into which the Guardian passes and through which the Guardian enters into and dwells in the partaker. This aim and belief, which half or unconsciously is the aim of all true Hindu worship, stands out clearly in the Thag brotherhood and oneness of spirit in murder secured by eating the sacramental sugar of the pitiless Kall: and in the brotherhood of kindness and tenderness gained by partaking of the food offered to the Guardian at Pûrî in Orissa. As a main bond of union and oneness of spirit, liquor, like its prototype blood, has lost its ancient glory among orthodox Hindus. Still the literature of Sôma and the practice of the wilder tribes and lower classes shew an agreement between Hindu belief and the belief of other nations and peoples that into consecrated or sacramental liquor a Guardian spirit enters, and, passing into the partakers, makes them of one heart and of one mind. Far as the inspiration of wine can be traced the inspiration of blood can be traced further.90 Wine is blood, said the antique Egyptian, and blood, not

wine, was the leading Mexican sun-sacrament. The early sacrificial drinking of blood as the life is refined into the drinking of the life of John Barleycorn or of the blood of the grape as the life of the world. In the mysteries of Babylon and Chaldea the ferment of wine, like the ferment of blood, was considered the direct working of the creative spirit. Wine, the blood of the grape, was the blood of Belus, the early Guardian, who spilt his own lifeblood on the ground, that, mingling with the dust, the divine blood might ferment into universal life. From Chaldea the mystic view, that the origin of life is the self-sacrifice of the spirit of Nature, passed west in the slain Adonis Orpheus and Dionysos, the blood of the grape, the blood of the guardian, scaring evil, housing evil, passing himself and his hosts into his worshippers, and, in divine ecstasy, enabling them to overleap the barriers of Self. 22

Over much of Western Asia the great Arab Prophet's (A. D. 612) yearning for scents drove the sacred use of liquor from earth to heaven.³³ Still in the seat of its old divinity, in Syria, Babylon and Persia, liquor continued to receive worship. In the fourteenth century (A. D. 1388), after about seven hundred years of the rule of wine-hating Islâm, Hâfiz sings the praises of wine with not less fervour than the old Persian songster hymned the Haoma:—

"On a rose-leaf, I saw, writ with the blood of the wind-flower, The bringer of ripe understanding is the ruby-red wine."4

Again: -

"That bitter maker of rye faces which the pious misname Mother of Fiends (Umm-ul-Khabāith), Is more pleasing to me than the virgin's kiss."

Again: -

"He who has learned the secret of the Almighty on the threshold of the wine shop
Gains through the wine cup the full knowledge of the Derwish's cloister (that is of the mysteries
of belief),"

**

On the secret of the Almighty on the threshold of the wine shop

Gains through the wine cup the full knowledge of the Derwish's cloister (that is of the mysteries
of belief),"

**

On the wine shop

On the wine

Once more Hâfiz sings: --

"Give me wine that I may make clear the secret of Fate,
And shew forth the face of the Lord who charms me and whose seent inflames me." "".

** One of the Prophet's own sayings or hadtth, recorded by the Saint of Saints, Abdul Kådir Gilåni (A. D. 1257) in his Futth ul-Gheib, The Opening of the Unseen, Lahor Edition, p. 29, and in Jalai-ud-din Růmi's (A. D. 1250) Massavi', Bombay Edition, Part I. p. 17, shews the keemness of the Prophet's love of scents: "Three things in this world I am forced to love, scents, women and prayers. But prayers are to me coolers of the eyes." The Arabe, before the Prophet, were fond of wine. Al-Mas'ûdi (A. D. 915; Prairies d'Or, Arab. Text IV. p. 218) gives the tale of Abû Mihjan, the here of the great Arab victory of Kådisiyyah over the Persians in A. D. 645 (H. 23). This famous warrior was also a poet. Shortly before the battle, the Arab General Sa'âd, who hated wine, ordered Abû Mihjan to be put in chains. On the morning of the battle, Abû Mihjan persuaded the general's wife to set him free for the day. The lady loosed his chains and gave him one of her husband's famous mares. On his return from the battle, which his skill and courage had mainly won, Abû Mihjan stretched his legs to receive the fetters. "Why wast thou imprisoned?" the lady asked. "For these lines," said the poet, "in praise of wine —

When I die bury me beneath the vine-tree: Let the dew from its tendrils water my benes; Bury me not under the open sky where my soul Would lack the clinir that in life sustained it."

The praise of wine was again permitted in the laureste days of Hirfn-ar-Rashid (A. D. 786-808). And the mediaval Arab poetry, which began under Hardn-ar-Rashid at its close in the eleventh century, passed the torch to the early Persian poets. The great Sa'sdi (A. D. 1257) mellowed with mysticism the praise of wine, using the ferment of wine as a symbol of the creative working of the love of the Almighty —

From the wine that the eyes, that is the love, of Allsh shed in the mingling of Sa'adt's soul, His brain will swim till the dawn of the Day of Doom. — Fast Lastfullah Fortdi.

Bar-bargi-gul si-khûni-shakûyik-nawishtah-and, Kûn-kas-ki-pukhtah-shud-mayi-chûn-arghawda girift.

86 Bar ástanah i mai khônah har kih yift sirê, Zi faisi jám i mai asrári khônkah dônist.

Mai bidih ta dihamat Agahi i sirri kasa. Kih bursi bih shudam dehako bar bai bih mast. About a century before Hafiz the early mysticism of Babylon and Syria awoke in Sa'âdî's (A. D. 1258) ascetic praise of wine as the type of the creative love of the Almighty:—

"The child of the world deep sunk in slumber knows not Life;

To be drunk with the wine of God's love, that is Life."97

About the same time (A. D. 1207-1277) the Master of Rûm, the mystic High Priest, Jalal-ud-dîn, refines the early Babylonian —

"Life is the life of the Lord and the leaven of life is Blood;"

into the highest word of the mystic school -

"Life is the love of the Lord and the leaven of life is wine."

That is, the divine yearning of the Almighty to shew Himself is still active in the ferment of wine. This he repeats in more detail:—

"When (the Lord) the great Cupgiver of the day of All-Souls,

Poured a drop of the wine of his love on this lowly clay,

The clay fermented, and of that fermented clay are we.

Spare, Lord, to us helpless, one more drop of the wine of thy love."36

It is strange that the Master, whose learning had raised him to so lofty a vision of life, should forthwith become the disciple of the hermit Persian Shams of Tabriz because of his one oddly Indian utterance:—

"What is this learning of yours,

Better the blackest ignorance

Than a knowledge that saves not from Self."

The sacrament of wine, which, in India, has passed out of repute, remains a leading rite in the half Indian religion of Tibet. The service, known to Europeans as the Eucharist of Lamaism, and locally as the Gaining of Life, seems to imply the acceptance of the two great secrets of sacrifice:—

- (a) The Guardian Life enters into the offering; and
- (b) By partaking in the offering the Guardian Life passes into the partaker.

To the Indian Buddhist any seeking after Life is worse than meaningless. To him the trammels of life, like the trammels of Self, are evils to be shaken off, not possessions to be won. The Tibetan search for Life is, therefore, either local or Christian, probably Nestorian (8th to 13th century A. D.). The offerings are wine, called either the wine of life or the juice of devils, apparently the blood of the slain foes of the deity, but, since in Lamaism, most devils are Guardians, the phrase may mean the guardian's blood. Besides wine, offerings are made of pills of life, prepared from flour, sugar and butter, and of wafers composed of flour, butter and rice The service begins by the priest bringing into himself the god Buddha Amitâyus by touching the image of that god and then his own heart with the thunderbolt sceptre. Next the priest invokes and takes into himself the guardian demon and through the guardian the king of the demons, when, being demon-possessed, he is able to put to flight the hosts of evil influences. Next the priest meditates. He invokes all guardians, deities, Buddhas, and Bodhisattvas to endue with life the wine in the vase. The partakers kneel and some drops of the holy wine are given to each. Each rinses his month, touches the crown of his head, and drinks. On the head of each, in succession, the vase is set, and his crown is touched by the thunderbolt. Then each swallows a few drops from the skull cups, and takes some of the Life pills, with reverence receiving from the Lord of Life the gift of Life without end.*

The result of these notes on liquor may be thus summarised. Liquor is both a scare and a house. To scare evil spirits liquor is sprinkled on the ground, and is given to the sick, the

Ghifil-and-as-rindagi-mastini-khāb, Zivdagini-chiti? Masti az sharćb.

Mamori, Book V. pp. 15, 16, Bom. Ed.

dving, and the dead. As a house liquor lodges ancestral and other guardians. But being a house it is a tempting lodging to unhoused evil influences, who, unless the guardian house is guarded, may make their lodging in the house and vield harm instead of help to those who hope from the guardian house to draw guardian influences. It follows that at all stages, at the making, at the storing, at the using of wine, still more at its consecration, special care must be taken to prevent the trespass of unguardian influences. Since liquor is a lodging for evil influences as well as for good, the drinker's object may be either selfish to draw a guardian into the wine and through the wine into himself; or it may be devotional to draw into the liquor and so into himself the evil influences which otherwise might harm and haunt the object of his devotion. Since wine is the home of a guardian, wine is a sacrament, that is, a thing inherently holy as a guardian's dwelling. Again, wine is the offering or victim, the sacrifice that is, the thing made holy by the passing into it of the guardian spirit to whom it is offered. More than this, wine is the blood of ancestors, the guardian's blood. So the sacrifice is also the sacrament; the victim is also the guardian. This is the complete sacrifice, since the guardian not only passes into it, but is one with it. Therefore, through this complete sacrifice, the guardian passes with special power into him who partakes of the sacrifice. This, the inner shrine of Mysteries, secures the object of all rites and of all sacrifice, that, by sharing in the offering, worshippers may become of one spirit by taking into themselves the spirit of a guardian who sacrificed himself, and by sacrificing himself proved himself to be the true type of the old-world human Champion and Mother, whose devotion is the birth of the Guardian, who sacrificed self and life for their children and friends.

(To be continued.)

MISCELLANEA.

SOME REMARKS ON THE KALYANI INSCRIPTIONS.

(Continued from p. 303.)

(21) Haribhunja.

This is the classical name of Labon to the north of Siam. Chiengmai or Zimmè is probably intended here. The Burmese writers also call Chiengmai Yun or Yonaka, and the art of lacquerware, which is derived from that country, nundô.

(22) Chinadêsa.

The Chou and the Chin dynasties reigned in China in 550-200 B. C. The latter dynasty was thus synchronous with the Maurya dynasty, with whose sympathy and encouragement the tenets of Buddhism were transplanted beyond the confines of India. The name China became stereotyped owing to frequent intercourse, commercial and religous, inaugurated by Buddhism in the 3rd century before Christ.

(23) The Yôga River.

This may be identified with the Bassein River. In the 15th century the port of the deltaic province of Pegu was Bassein. Rangoon was non-existent in those days and was then known as Tigumpanagara (see note 25, post). Ships called at Bassein and their cargoes were transported in native boats through the Twantê and other creeks to Pegu. The journey took about eight days in the 16th century when Cæsar Frederike visited Pegu (s. v. "Cosmin" in Yule's Hobson-Jobson).

(24) Shrines at Anuradhapura.

The Ratanachetiya, Marichivattichetiya, Thûpâ-râmachetiya, Abhayagirichetiya, Sîlâchetiya, Jêtavanachetiya, Mahâbêdhi, and the Lohapâsâda, etc., are mentioned in the Kalyânî Inscriptions. Perhaps, it would be well if the Archaeological Commissioner of Ceylon would favour this Journal with a short description of each of these shrines.

(25) Tigumpanagara.

See "Dagon" in Yule's Hobson-Jobson. where the derivation of the word is discussed. Owing to the modern mania of Burmese writers, due to their short historical memory and ignorance of comparative philology, to ascribe every classical name to a Pâli origin, Tigumpachêti is now spelt Tikumbhachêti. In spite of the dictum of Yule and Forchhammer, it is quite probable that Dagôn is a corruption of Dagob or Dagoba, the Sinhalese word signifying a Relic Shrine. In ancient native writings the shrine is called the Digôn Chêti, and the town Digôn, the rowel in Digôn being pronounced as a.

(26) Dhammacheti's Bell.

Its weight was 3,000 tulus or 120,000 viss. It measured 8 cubits at the mouth and 12 in height. At the beginning of the 17th century the Portuguese adventurer, Philip de Brito y Nicote, alias Maung Zinga, who held his court at Syriam, among his other acts of vandalism, removed this huge bell and put it on board a ship which sank with its sacrilegious cargo at Dôbôn near Rangoon.

(27) The Paradha.

This wind is also called Parûja. My Burmese assistant tells me that its latter appellation is due to the following fanciful derivation:—
"Parûjêtîti Parûjo" = because it occasions loss or ruin!

(28) Någapattana.

Nagapattana is, no doubt, the modern Negapatam (q. v in Hobson-Jobson).

(29) The Cave of the Emperor of China.

The cave constructed by command of the Mahārājā of Chinadêsa must have been made when Ceylon was under temporary subjection to the Emperor of China in the 15th century (Tennent's Ceylon, Vol. I. pp. 621-625).

(30) Navutapattana and Komalapattana.

These places are ports on the Coromandel Coast, but have not as yet been identified.

(31) Nágarási.

Någaråsi is Negrais (q. v. in *Hobson-Jobson*). The Burmese name is Mòdingarit.

(32) The Mahabuddharupa.

The great image here referred to may be identified with the colossal recumbent image of Gautama Buddha between the Kalyantsima and Mahacheti at Pegu. It measures 18] feet in length and 46 in height (ante, Vol. XXII. pp. 46 and 347).

(33) The Mudhavamahachetiya.

This shrine is the modern Shwemodo Pagoda. of Pegu (q.v. in my Notes on an Archeological Tour through Edmannadese, aute, Vol. XXL p. 365).

TAW SEIN-Ko.

TWO INEDITED CEYLON COINS

WE have come in South India across two remarkable in edited coins of the Kandyan kings, which have since been given to Mr. Bell of the Ceylon Civil Service, Archæological Commissioner of Ceylon.

(1) a gold fanam-

Obverse. - Standing Sinhalese man.

Reverse. — (Någarî legend) Vijayabâhu.

(2) a copper quarter massa --

Obverse. - Standing Sinhalese man.

Reverse. — Dharmâśôkadeva (in Nâgarî).

Mr. Bell, though an ardent coin collector, had never met with these in Ceylon, and gave us in exchange for the copper piece the gold coin inscribed Lankésvara (Nos. 1, 2, 3 or 4 in Mr. Rhys Davids' Plate, in the Numismata Orientalia. Ancient Coins and Measures of Ceylon). Professor Rhys Davids evidently was unaware of the existence of the gold fanam and the quarter massa abovementioned: for he makes no mention of them in his essay on Ceylon coins, explaining the abovementioned Plate. Mr. Tracy of Perivakulan. Madura District, is known to possess a duplicate of the gold fanam of Vijavabâhu, and we possess a duplicate of the quarter massa of Dharmasokadeva -a bad specimen, the one given to Mr. Bell being in excellent preservation.

During a tour that we made lately in the eastern part of the Madura District, we came across many coins of the Kandyan kings. A gold Lankésvara in company with a gold Rajaraja (No. 165, Plate IV. of Sir Walter Elliot's Numismata Orientalia, Coins of Southern India) were acquired for us at Parmakudi, a town on the banks of the Vaigai, not far from Kilakarai, which is said to be one of the capitals of the Pandya Dynasty. From all these facts it is patent that considerable intercourse has existed between South-Eastern India (the Pandya country) and Ceylon, for the last 800 years, at least across the pearl-laden seas which divide them.

T. M. RANGACHARI.

T. DESIKACHARI.

notes and queries.

LAL BEG AND THE MUSALMAN CREED.

An amusing anecdote, apropos of these words, is often related. A scavenger was once boasting that none but the followers of Lal Beg would be saved. He was asked to reflect and find if there was the slightest chance of salvation for men of any other faith. After some hesitation he

said—"Yes, there is a small chance in favor of Muhammadans who practically, although unwittingly, invoke the name of the Lâl Gura in their creed by saying la ilaha ill' illahu (there is no god but God)."

J. G. DELMERICK in P. N. and Q. 1883.

SOME EARLY SOVEREIGNS OF TRAVANCORE.

BY P. SUNDARAM PILLAI, M. A.

(Concluded from p. 311.)

XIII.

EVENTEEN years later, we meet with another monarch of Vênâd. That the 22nd of Idayam 427 was a day in the reign of Sri-Vira-Padmanabha-Martandavarma Tiruvadi is proved by a Vatteluttu inscription at Varkkalai, a place of pilgrimage about 24 miles to the north of Trivandram. Perhaps to the pilgrim world in India, no place in Travancore is so well known as Varkkalai or Janardanam. The geologically interesting cliffs that form the characteristic features of this promontory, are obviously of much carlier formation than the alluvial soil surrounding it on all sides, and possibly the early Indian geographers used it, along with Cape Comorin and Râmêsvaram on the eastern coast, so for marking off the southern contour of their favourite Bharata-Varsha. The mineral springs of this sacred place may be taken, perhaps, as furnishing another and more practical justification for the estimation in which it is held by foreign pilgrims. To the Sthala-Purana of the place, however, the hills and the springs are as if they never existed. It delights only to relate how on one occasion the Dêvas performed a sacrifice on the spot, how the Brâhmanas had then a feast, rich and indescribable, and how the local deity, with the object of perpetuating that feast. practised a clever and successful practical joke upon the authors thereof! On the southern wall of the chief shrine in this spot will be found in four lines the document I now proceed to translate:-

No. 13 Vaţţeluttu Varkkalai Inscription of Vîra-Padmanâbha-Mârtandavarman.

"Hail! Prosperity! In the Kollam year 427, with Jupiter entering into Aries, and the sun 21 days old in Taurus, Wednesday, the 5th lunar day after new moon, and with the sign of Cancer rising in the orient, the loyal chieftains of Srî-Vîra-Padmanabha-Martandavarma Tiruvadi, graciously ruling over Vênâd, consecrated the holy temple of Vadaśêrikkarai, at Udaiyamartandapuram in Varkkalai, after constructing with granite stones the inner shrine from the foundations to the wall plates, and paving the courtyard with stones, besides repairing the Srî-Mukha-Mandapa (or the hall in front facing the shrine)."

This is one of the most satisfactory Vatteluttu inscriptions I have, every word in it being clear and unmistakable. It proves that on the morning of the 22nd of Idavam 427 M. E., about 9 a. m., Wednesday, the throne of Vêṇâd was enjoyed by Srī-Vīra-Padmanābha-Mārtāṇḍavarma Tiruvaḍi, who in all probability immediately succeeded Srī-Vīra-Ravi-Kēraļavarman of Maṇalikkarai fame. It is interesting to note that the sacred spot where the Kēraļavarman of Maṇalikkarai fame. It is interesting to note that the sacred spot where the temple now stands was then called Udaiyamārtāṇḍapuram, no doubt in commemoration of an earlier builder or patron of the fane; but it cannot be the Udaiyamārtāṇḍavarman of our Tiruvaṭṭār inscription, as it is not likely that the temple could have demanded repair and reconstruction in so short a time. That the chiefs of Srī-Padmanābha-Mārtāṇḍavarman were not the originators of the temple is clear enough from their having had only to repair the hall facing the shrine.

³⁹ It is possible that the sanctity of Varkkalai is partly due to its having been taken by early Indian geographers to be in the same latitude as Râmêšvaram in the east. Later, perhaps, a closer approximation was attempted by the foundation of a temple near Quilon, under the very name of Râmêšvaram. That something of the kind must have been meant, is proved by such places as the following almost in the same latitude:—Alwaye and Madura, whose ancient name was Âlavây, and Trichûr and Trichûnopoly, obviously derived from the same root, despite modern fanciful corruptions.

^{*} It is available only in manuscript. Its style is clearly modern.

XIV.

Hitherto we have been discussing the records of a series of sovereigns, from 301 10 427 M. E., with intervals too short to lead us to suspect their unbroken succession. But now for the first time appears an apparent blank. The next king of Vênâd revealed by the documents in my collection is Sri-Vira-Udaiyamartandavarman II., who ruled on the 22nd of Kumbha 491 M. E. There is thus an interval of 64 years - a period presumably too long to be allotted to one reign. What princes, if any, enjoyed the throne of Vanid during the interval, and whether they have left any traces at all behind them. future researches alone can determine. I have about 15 documents in my present collection. dated from 400 to 491 M. E., but none of them gives me any help. On the other hand. judging by the light of these records, one would be led to conclude that this unaccounted interval of half a century was a time of trouble in the south-eastern frontiers of Vênâd. It is about this time that the foreign temple of Rajendra-Chôlesvara at Kôttar receives several grants and dedications from private parties, prima facie foreign to Travancore. In the midst of these grants and presumably of the same age, so far as paleography and situation can tell us. occur four inscriptions dated in the 11th year of Kô-Jatavarman alias Sri-Sundara-Chola-Pandyadeva. In an inscription at Suchindram, dated in the 9th year of the same Pandya king, this ancient village is itself called Sundara-Chôla-chaturvedimangalam. Finally in Saka 1293, or 546 of the Malabar era, this same foreign temple of Rajendra-Chôla receives substantial repairs at the hands of Parakrama-Pandyadeva. What could all this mean but that South Travancore was once more, about this period, under foreign sway? It looks highly probable that 'Srî-Sundara-Chôla-Pândyadêva of the inscriptions we have just noticed, was the same as Jathvarman alias Sundara-Pandya, whose accessioned is calculated by Mr. Dikshit of Dhulin, from materials furnished by Dr. Hultzsch, to have taken place in the Saka year 1172, and whose ninth year of reign in consequence would be Saka 1181, or 434 M. E., i. e., exactly seven years after the chieftains of Vîra-Padmanâbha-Mârtândavarman completed their reconstruction of the temple at Varkkalai. Probably, then, soon after the completion of that architectural undertaking in the north, Srî-Vîra-Padmanâbha-Mârtândavarman must have been called upon to do more anxious duties in the south. The cloud must have been gathering in that horizon even much earlier. I find the foreign temple of Rajendra-Chôlesvara rising into favour from 392 M. E. The contest might have been long kept up, but the result could not have been other than unfavourable. Sundara-Chôla-Pândyadêva succeeded at least in wresting the whole of the district of which Kôttar was the centre. He seems to have established also his authority so widely and well as to lead private parties to reckon their grants in the year of his reign, and to call an ancient hamlet like Suchindram by a new fangled name, coined specially to flatter his pride. Sundara-Chôla-Pândya was by no means the last of the revived dynasty of Pandyas to trouble Travancore. I have with me an inscription dated in the 3rd year of Udaiyar Sri-Chôla-Pandyadeva Kôchchadaiyavarman. another dated in the 2nd year of a simple Kôchchadaiyavarman, probably the same as the last: two again dated in the reign of Maravarman alias Vikrama-Chola-Pandyadeva, and two more in the reign of Maravarman clice Srivallabha-deva. Pending further researches, we may. therefore, for the present, reasonably assume that the hiatus of sixty years, of which we have now no account, was a period too full of trials and tribulations to allow occasions for such acts of charities and temple buildings as form the subject matter of the Travancore inscriptions

But before the end of the fifth century, the Pandya wave of conquest must have recorded for a while; for we get once more a glimpse of the Venad throne in 491 M. E. On the 22nd of Kumbla of that year, that throne was occupied by Sri-Vira-Udaiyamartanda-varman II., alias Vira-Pandyadeva. My authority for this statement is an inscription in five

lines on the southern wall of a temple at Kêralapuram, about three miles from Padmanabhapuram. It would read thus, if translated:—

No. 14 Vatteluttu
69. Old Malayalam. Kêralapuram Inscription of Vîra-Udaiyamârtandavarman II.

"In the Kollam year 491, and in the 4th year, the sun being 21 days old in Aquarius, is made the following grant. The loyal chieftains of Sri-Vira-Udaiyamartandavarma Tiruvadiyar, Vîra-Pândyadêvar, graciously ruling over Vênâd, do hereby provide in writing for a sacred perpetual lamp and for the daily expenses of the Mahadêva of Sri-Vira-Kêralêśvaram, at Muttalaikkuruchchi, in Pâlkôdudêśam, in division No. 1 of the district of Chenkalunîrnâdu, in Tennâdu, belonging to (or under the administration of) the said chieftains. Accordingly, the said chieftains make over (for the said purpose) all the dues taken as kaliyakkam, from this désam (or circle), including offira tax, uvvi, bamboo grain, alagerudu, duty on looms and palmyras. karaipparru, fines and kô-muraippúdu. In this manner then, the said chieftains grant in writing, all the dues taken as kaliyakkan from this desam (or circle), including offica tax, uvvi. bamboo grain, alagerudu, duty on looms and palmyras, karaipparru, fines and kô-muraipvádu, excepting such of them as have been already granted to meet the charges of the Mahâdêya of Tiruvitâikôdu⁹² and the Dêva and Bhagavatî of Pâkkôdu, to be made use of as long as the moon and the stars endure, for the purpose of supplying the daily needs of the Mahâdêva of Kêralêsvaram, and a sacred perpetual lamp to the same deity, which fact we the following do know and can attest: - Châttan Maniyan of Tâlkkil Pulavaraman; Nûrâyanan Kudîśan of Penankâdu; Kandan Iravivarman (signature); * * Tiruvikraman of Punalûri (signature). This deed in cadjan is written with the knowledge of the above persons by Irâman Kêralan of Kaitavây (signature)."

Thus then on the 22nd Kumbha 491 M. E., or roughly speaking about the end of February 1316, the sovereign of Vênâd was Sri-Vîra-Udaiyamartandavarman, who, it will be observed, styled himself further Vîra-Pâṇḍyadêva. Nothing could be of greater historical interest than to know the circumstances that led to the assumption of this new and foreign title: but I have succeeded as yet in finding no clue whatever towards its solution. May it be that when the Pândya power shrunk back to its original condition, after having been blown out into dangerous and meddlesome greatness by the breath of a Kôchchadaiyan or a Kômâran, the Vênâd kings not only regained their lost ground, but also retaliated by invading and conquering a portion of the dominions of their recent conquerors, and assumed, too, their style and manners to legitimize their hold upon the territories so added to their own? Agreeably to this foreign title, we find also the no less foreign method of dating the inscription in the year of the sovereign's reign. But thanks to the wisdom of the Vênâd chiefs, this new method was not allowed to supersede, but was only combined with, the old and sensible way of reckoning in the fixed Kollam era. In the case before us, therefore, the mention of the year of the king's reign, instead of giving rise to endless collations and calculations, as is so usual in Indian epigraphy, only gives us the additional welcome information that Udaiyamârtândavarman ascended the throne three years previously, i. e., in 488 M. E. It is quite possible that the reference is made not to the year of the accession, but to the date of his assuming the foreign title of Vira-Pandyadêva. In either case, we are sure that the reigning sovereign of Venad on the 22nd of Kumbha 491 (March 1316) was Srî-Vîra-Udaiyamârtândavarma Tiruvadi. Having already met a king of this name, we may call him Srî-Vîra-Udaiyamârtândavarman II. or as, styled in the document before us, Vîra-Pândyadêva.

As for the particulars of the grant, I am at a loss to understand the nature of all the taxes set apart by this document for the use of the Mahadêva. Most of the terms used are unknown

⁹² The word Travancore is a corruption of Tiravitätködu. But I am not at all sure Tiravitätködu is analysable into Sri välum ködu, as is now so generally assumed. The derivation ewes its plausibility to the corrupt form of Tiravänködu.

to literature and the lexicons, and as far as I am aware, they are obsolete also in the current revenue system of the land. Neither kaliyakkam nor office carries any meaning to my mind. Fig. according to Winslow, may mean 'head;' but what sort of tax was called by this rare word for 'head' is now impossible to conjecture. 'Bamboo grain' is still of some use to hill-men. and probably it stood, in those days of little or no forest conservancy, as the type of hill products, which in Travancore now includes besides timber, ivory, bees' wax, etc. Alageruda is a term already met with in these inscriptions and despaired of. Literally, it may mean a 'fair bull.' To the known tax on hand-looms, we find here attached a tax on the palmyra, and it looks probable that what is meant is a tax for tapping, and not otherwise using, that nalm. Besides fines, the government of those days, it would appear, appropriated certain payments under the name of kū-murainvādu, literally 'royal-justice-income,' which we might take to represent the court fees and 'indicial revenue' of modern times, Karainvarru means 'adhering to or reaching land,' and it might be taken to include treasure trove, mines. ietsam and flotsam, and all such royalties known to law. It would be interesting indeed to know how, at what rates, and through what agencies, these several taxes were levied. and what exactly was the bearing of the change with respect to both people and government, when the revenue was assigned away, as in the present instance, for the maintenance of a particular temple. One would think from the minute political divisions and subdivisions noticed in this document that the administration of the revenue was far from crude or primitive. We have seen above that Vênad was primarily divided into eighteen provinces or núdus, and probably Tennadu, or, Southern Province, was one of these primary divisions. That the part of the country about Padmanabhapuram should be called the southern province, while the one still further to the south is named Nanchil-nadu, may be significant of the extent of the Vênad principality at one stage of its history. The loose and redundant style of the document speaks badly of the literary capacity of the hereditary clerk of the crown, Kaitayây Irâman Kêralan, -- whose family name, Kaitavây, occurs so frequently in the royal grants in my collection, - unless, indeed, it is taken to indicate the hurried occasion of the grant itself. such as the flush of a signal triumph, or sudden recovery from a serious malady. The absence of the usual expression 'Hail! Prosperity!' at the commencement, and that of the 'sign manual' at the end are omissions equally worthy of attention. What they signify, if anything at all, we have no data to determine. That only two of the four ministers or chieftains that arrange for the grant sign their names, may to some extent be taken as an indication of the state of education at the time.

Results.

The next record I have in point of date would take me beyond the fifth Malabar century, and therefore beyond the scope of the present paper. Of the many themes of historical interest calling for investigation in Travancore, I selected the royal house as that most naturally and rightfully claiming my first and foremost attention. Limiting myself to a particular period in the history of that house, viz., the 4th and 5th Malabar centuries, of which no account of any description has been hitherto forthcoming, and availing myself of but one of the means of historical research, the safest and the best in fact, viz., public stone inscriptions, I have endeavoured to dispel the darkness in which the epoch has up to date been enveloped. Putting aside all side lights and inferences as to the general condition of the country, its society, its economy, its internal government, I have now the following solid facts to offer:—

- I. Sri-Vîra-Kêralavarman ruled Vênâd in 301 and 319 M. E.
- II. Sri-Vira-Ravivarman in 336 and 342 M. E.
- III. Srî-Vîra-Udaiyamûrtandavarman I. in 348 M. E.
- IV. Sri-Aditya-Râmavarman in 365 M.E.
- V. Sri-Vîra-Râmavarman in 371 M. E.

- VI. Srî-Vîra-Râma Kêralavarman in 384 and 389 M. E.
- VII. Srî-Vîra-Ravi-Kêralavarman in 410 M. E.
- VIII. Srî-Vîra-Padmanâbha-Mârtândavarman in 427 M. E.
 - IX. Srî-Udaiyamârtândavarman II. alias Vîra Pândyadêva in 491 M. E.

It will be observed, in this list of the early sovereigns of Travancore, whose names and dates the inscriptions have served to bring to light, I have not included the doubtful case of Sri-Vîra-Kêraļavarman II. of the Ârringal fragments, or of Kôda-Mârtânda, who seems to have taken part in the institution of the Kollam era in 824 A.D. That these names and dates by themselves will not constitute the history of the two centuries under investigation, needs no saying. But that they will stand in good stead when the history of the epoch comes to be written, is my humble hope and trust.

ESSAYS ON KASMIRI GRAMMAR.1

BY THE LATE KARL FRIEDRICH BURKHARD.

Translated and edited, with notes and additions,

by G. A. Grierson, Ph.D., C.I.E., I.C.S.

NO. I. - THE VERB.

A. INTRODUCTORY.

AUTHORITIES.

1. I. - Printed -

- (1) Texts ---
 - (a) Ns. = The Holy Bible, translated into the Kashmeera Language by the Serampore missionaries. Vol. V. containing the New Testament; Serampore 1821 (in Sâradâ characters).
 - (b) Np.= متى, موقسة, لوقا, يوحناً سنز انجيل , The Four Gospels, Lodiana, 1882 [in Persian (ta'l'q) characters].2
 - (c) K. = A Dictionary of Kashmiri proverbs and sayings, by the Rev. J. Hinton Knowles, Bombay, 1885.3
- (2) Grammars and Dictionaries—
 - (a) Ed. = Grammar and Vocabulary of the Cashmiri Language, by M. P. Edgeworth; J. A. S. B., Vol. X.; Calcutta, 1841 (in the Roman character).
 - (b) L. = Grammar of the Cashmeeree Language, by Major R. Leech, J. A. S. B., Vols. XIII., XIV.; Calcutta, 1844 (in the Roman character).
 - (c) B. = Grammar contained in Dr. Bühler's Detailed Report of a Tour in search of Sanskrit MSS. in Kâśmfr. J. R. A. S., Bo. Br., for 1877 (in the Roman character).

¹ This series of three valuable essays on the Ka initi Language, dealing respectively with the Verb, the Noun, and the Preposition, appeared originally in the Proceedings of Royal Bavarian Academy of Science, for 1887, 1888, and 1839. They are republished in an English dress by the courteous permission of that body and of the heirs of the learned author. The translator wishes to record his acknowledgments to Prof. Kuhn of Munich for his kind offices in obtaining the necessary permission. Additions by the translator are enclosed in square brackets.

² [There are also several publications of the Srinagar missionaries; some in the Persian, and some in the Roman character; including a very useful church-service for Native Christians in the Roman character. The student must be warned against Ns. It is full of serious blunders. — TRANS.]

The proverts and sayings are in the Roman character. As might be expected from the contents, the language is often extremely elliptical, and appears to resemble closely the colloquial. The work is not of much value from the point of view of grammar, but is of the highest importance from that of leuteography. The English transaltions are not always literal, as indeed was often not possible.

(d) El. = A Vocabulary of the Kashmiri Language, Kashmiri-English and English-Kashmiri, by William Jackson Elmslie; London, 1872 (in the Roman character).⁴

The following are not mentioned by Dr. Burkhard :-

- (e) W. = A Grammar of the Kashmiri Language, by the Rev. T. R. Wade, B. D., M. R. A. S.; London, 1888 (in the Roman character).
- (f) A. = A Vocabulary of English, Balti and Kashmiri, compiled by H. H. Godwin Austen, J. A. S. B., Vol. XXXV.; Calcutta, 1866.
- (g) Lw. = The Valley of Kashmir, by Walter R. Lawrence, I. C. S., 1895. Chapter XIX. contains an important Glossary of Kâśmiri words.

II. - Manuscript -

- (1) Texts -
 - (a) In the Dévanagari character; (a) Collection of Kasmiri songs, made by Chand Râm (very difficult).
 - (8) Någårjuna-charita Kåśmiribhåshåyåm. (Two MSS., one complete, one extracts.)
 - (b) In the Roman character; (a) Extracts from the Nâgârjuna-charita.
 - (β) Yusuf-o-Zulaikhâ...
 - (y) Shîrîn-o-Khôsrav.

The last four are the property of Dr. Bühler.

- (2) Grammars and Dictionaries
 - (a) Mp. = A Kâśmiri Grammar from the Puna Library [in Persian characters (ta'liq) and language).
 - (This MS., which is mentioned in Dr. Bühler's Detailed Report (above, I., Σ (ε)), and which has been most liberally placed at my disposal, has been of most assistance to me.
 - It contains 98 pages in small 8vo. Pages 1-46, about 1,200 words arranged in the order of the Persian Alphabet in 29 divisions; pp. 47-53, the Irregular verbs, quoted in the Infinitive, Present, Perfect Participle, Imperative, and Aorist (always in the 3rd person), with Persian, translation; pp. 55-84, the conjugation of regular verbs (pp. 55-84, rachhun and sārun); pp. 71-74, yun; pp. 74-76, gatshun; pp. 76-85, māranāvun; pp. 86-89, the conjugation of auxiliary verbs; pp. 89-90, the Pronouns; p. 90, remarks on certain letters which are used as suffixes; p. 92, Declension; pp. 93-98, Numerals.)
 - (b) A Kâśmiri Grammar by Dr. Bühler (in the Roman character).
- 2. This is not the place to criticize the above mentioned grammatical authorities; I merely feel myself justified in remarking that they leave many points which are far from being satisfactorily cleared up. Putting to one side the terribly varying, and indeed, to the beginner, altogether confusing, transliteration which sometimes is not even consistent throughout one and the same work, there is absolutely no explanation to be found in any of them of some of the most difficult questions in regard to the conjugation of verbs. In some instances important forms are altogether omitted. Anyone who compares this work with its predecessors, can easily satisfy himself on these points.

Remarks. — (1) و ' , و أب , خ أب , غ و أب , و أب , ف أب , ف أب غ , أب ع
- (2) if is purely Arabo-Persian.
- (3) ; zh is purely Persian; in Mp. it is used instead of z ts.
- (4) $\[\tilde{n}^i \]$ is pronounced ny^i .
- (5) The letters enclosed in marks of parenthesis do not occur in Np.

PRONUNCIATION.

- 4. The pronunciation of the consonants is the same as in Persian and Hindustant. On the other hand the correct pronunciation of the vowels is not shewn by the Sarada (Dâvanâgari), or by the Persian Alphabet, or by any existing system of transliteration in the Roman character. For this reason, I have contented myself with reproducing the vowels which I find in the texts in the Sarada and Persian characters which are available to me, without any reference to the pronunciation; and refer the reader, who requires further information, to the scholarly and thorough comparison of Kâśmîrî sounds given by Leech (see above, Authorities, I. 2 (b) pp. 399-410). I may, however, remark that
 - (1) Persian i, and Sâradâ û, is sounded as ü in feminine forms; e. g., مُوعِد لِعَمَّةً لِعَمْتُهُ. [This is as often as not represented by a. I represent the sound whenever it occurs, however it may be writen, by a. TRANS.]
 - (2) The vowel * at the end of a word and before suffixes is hardly audible; e. g., عُرُمُ dopu (or عُمُ dop), Sâradâ [इप्] dapu, دُيُنَى dopu-n-as, Sâradâ [इप्] dapu-n-as;
 - (5) أَ d , is pronounced of in feminine forms; e. g., موزايم sôzôm, fem. موزايم sôzôyam; أَ اللهُ مُعْ مُعْلَمُ مُعْلِمُ مُعْلِمِ مُعْلِمُ مُعِلِمُ مُعْلِمُ مُعِلِمُ مُعْلِمُ مُعْلِمُ مُعْلِمُ مُعْلِمُ مُعْلِم

[Note by Translator on Kasmiri pronunciation.

5. Since the above was written the difficult question of Kâsmiri pronunciation has had much light to rown upon it by the excellent little grammar of Wade. The following notes derived

[[]This written before Mr. Wade's Gremmar was published.] * [Also i, see translator's note below.]

from the works of Elmslie, Bühler, and Wade, and checked by the writer himself in Kâśmîr may be found of use to students.

- 6. Vowel sounds. a, a, i, i, u, u, i, δ , δ are pronounced nearly as in other Indian languages. E and o are the corresponding short vowels of δ and δ respectively. They are pronounced like the e in 'met,' and the o in 'cot' respectively. The short e is represented in the Persian character by —, the same sign as that used for i, and the short o by —, the same as that used for u. In my transliteration I shall endeavour to distinguish between these two pairs of sounds although there is no difference in the Persian method of representing each member of each. Similarly, the Persian e e, is often used to represent the sound e, and e e, to represent e. When this is the case, I shall represent the pronunciation in transliteration.
- 7. Kåśmiri also possesses three broken vowels, viz., a, ü, and ô. The first of these is represented in the Persian character by —, as if it were a simple a, no distinction being made between the two letters. It is sounded something like a German ü, and hence Dr. Bühler represents it in transliteration by that character. As, however, Elmslie represents this sound in his Vocabulary, by à, and Wade uses a in his grammar, I have, after consideration, adopted the form a myself. This will prevent confusion in looking up words containing this vowel in the Vocabulary. Owing to the doubtful nature of this sound, it is as often represented in the Persian character by i as by a. Thus A j or A j zath, a rag. This sound has been mentioned by the author in § 4, 1 supra. It is developed from the influence of a following i or e, which has been elided, and left its influence behind, or, sometimes directly from i. Thus hara-m (Bühler, harū-m), feminine of horu-m, she was done by me, for *karī-me. Again pach; she went, but pachi (in which the i is not elided, but is fully pronounced), they (fem.) went.
- 8. The letter \hat{u} is merely the long sound of \hat{a} . Bühler represents it by \hat{u} , which has the merits of consistency. To be consistent, I should have adopted \hat{a} . As, however, both Wade and Elmslie represent this sound by a sign based on the letter u, (xiz., Wade \hat{u} , Elmslie \hat{u}), I have from practical motives adopted \hat{u} . This sound is of rare occurrence. An example of it is in the word $t\hat{u}r$, cold. It is represented in Persian by the sign $| \ \bot$, i. e., the same as that for \hat{u} .
- 9. The sound δ (cf. § 4, 3 supra), which is pronounced like the German vowel \ddot{o} , is also due to the influence of a following i which has disappeared. It is usually represented in the Persian character by 1, the same as that used for \ddot{a} , but we often find $\ddot{\omega} = \ddot{a}$ used for the same purpose. Thus $\dot{b}r\dot{o}r$, a tom-cat, fem. \dot{c} or (incorrectly), $\dot{b}r\dot{o}r$, for * $\dot{b}r\dot{o}r\dot{o}r$.
- 10. A final i or u (vide supra, § 4, 2) is sometimes pronounced so slightly as to be almost inaudible; this is represented by a small u or i above the line. Thus guru, a horse, guri, horses, tami, by him; but guri, mares, tami, by her, in which the final i is fully pronounced. In the Persian character, when these final vowels are fully pronounced, the Persian silent h (La) is used, thus, tami, by her. When the i is almost inaudible, the word is written without the h, thus, tami, by him. The u, specially, is barely audible, and is usually omitted in writing. Except when necessary for some particular reason, I shall also usually omit it in transliteration.
 - 11. The following is, therefore, the complete vowel system of Kâśmiri:
 - a, d, a, d i, i, i u, ú, u e, 6

I take the responsibility of using all these signs, instead of the few used by the author. They do not exhaust all the numerous shades of vowel-pronunciation in Kâśmîrî, but they give the principal ones, and will be found useful by the learner. It must be understood that I am entirely responsible for the insertion of these diacritical marks.

- 12. The following are the Persian methods of denoting these sounds: -
- q, __ (or sometimes __), e. g., تَهِز) تُهز) thaz, high (fem.)
- بْرِ اللهِ بِهِ إِلَّهِ إِلَى اللهِ إِلَى اللهِ إِلَى اللهِ إِلَى اللهِ إِلَا إِلَى اللهِ - i, _, e. g., مَرْ tạmi, by him.
- ", على, but more usually omitted, e. g., كُور) gur (guru), a horse.
- e, -, e. g., j. ader (fem.), damp; often, however, we find \(\sim \) incorrectly used. Thus,

vyet (fem.), fat.

- o, _, e. g., تست sot, silly.
- هُ, أ (or incorrectly عُنَا عَ), e. g., عَلَى اللَّهِ) moj, a mother, قَنْ إِنَّا اللَّهِ (fem.), beloved.
- 13. It should be noted, once for all, that when Kåśmîrî is written in the Persian character, the greatest carelessness is exhibited in the use of $\underline{}$ (a or a) and $\underline{}$ (i and e). These signs are continually, and capriciously, used, one for the other. The author has as a rule followed as nearly as may be the capricious spelling of Np., and I have throughout endeavoured to correct it in the transliteration.
- 14. Consonants. The letters ch and chh have occasionally developed into a new sound ts, and tsh, pronounced as written. This has already been noted by the author. Tsh is to be pronounced as ts+h, not as t+sh. It is represented in the Persian character by ϵ . A similar change occurs in Marâthî.]

[Note by Translator on the Phonetic Laws of Kasmiri.

- 15. Some of the changes, both of vowels and of consonants, which are common in Kāśmīrī, will be new to students of other Indian languages. The following remarks, partly condensed from those of Dr. Bühler, will tend to make them more intelligible:—
- (1) The vowels i(i), e(i) are frequently confused. One is often written for the other I is often pronounced as e, and i as i or i. So also there is a similar confusion between u, i, o and i.
- (2) A medial a or e usually changes to u or o, under the influence of an original following u. Thus karun to do, for *karanu; hostu, an elephant, for hastu. The oblique form is hasti, in which the a is preserved, because there is no original following u. Again, vyoju, fat, for *vyoju, fem. viel or vyoju, fat, for
- (3) Similarly, a medial i before an original final u becomes yu, and the original u becomes ". Thus, nyūlu, blue, for *nīlu; but oblique nīli. So also dyūṭhu, seen, for dūṭhu; but feminine dūchh, or dīchh, in which there is no original final u.
- (4) In the formation of feminines, and in the conjugation of verbs, and also occasionally in declenaion, the following consonantal changes often occur:
 - k becomes ch }, e. g., holes, or hokhs, dry, fem. hoch or hochk.
 - g becomes j or d, e. g., srugu, cheap, fem. sruj; longu, lame, land, or lanj. s becomes ch, e. g., tsotu, cut, fem. tsach.

- th becomes chh, e. q., by útha, seated, fem. bichh.
- t becomes ts, e, q., sotu, silly, fem. sats.
- th becomes tsh, e. a., mothu, anginted, fem. matsh.
- d becomes z, e. q., thodu, high, fem. thaz.
- d becomes i, e. q., lodu, built, fem. laj or laz.
- n becomes ni, e. q., kunu, alone, fem, kuni,
- l becomes j, e. q., wôzulu, red, fem, wôzaj.
- (5) The following vowel changes occur in declension and conjugation. Some have been "lready described above:
 - a becomes a in certain feminine nouns, e. q., nimat, a favour, pl. nimats (regarding the change of t to is, see above), and in forming feminines, e. g., khar, an ass, khar, a she-ass.
 - a becomes o in verbs, e. g., pakan, to go. Aorist poku.
 - g becomes a in certain feminine nouns, e. q., qab, a sheep, pl. gabi.
 - a becomes a in feminine monosyllabic nouns and in forming the feminine of adjectives, e. g., rát, night, pl. rôts; ásánu, easy. fem. ásôni.
 - ú becomes ô in verbs, e. g., márun, to kill; aor. môru.
 - i. see e.
 - i becomes u in verbs, e. g., chirun, to squeeze; sor. chûru.
 - a becomes a in masc, nouns, e. g., kokur. a cock, dat. kokaras.
 - u (often confused with o, q. v.) becomes a, e. q., wôzulu, red, fem. wôzaj.
 - u becomes ú, e. q., kuru, red, fem. kúr.
 - u becomes e, e. g., kôtur, a pigeon, fem. kôter.
 - u becomes o, e. g., hunu, a dog, pl. honi.
 - a becomes ô, e. q., krur, a well, pl. krôri.
 - û (sometimes written ô) becomes ô in certain feminine nouns, e. g., kûr, a daughter, pl. kôri.
 - i and e become yu or u in verbs, e.g., hekun, to be able; aor. hyuku.
 - ē becomes yu or ü in verbs, e. g., phérun, to turn; aor. phúru.
 - o (often confused with u, q. v.) becomes a, e. g., badu, big, fem. bad.
 - o becomes e, e. g., vyotu, fat, fem. vyet; adoru, damp. fem. ader.
 - o becomes u in verbs, e. g., wothun, to rise; acr. wuthu.
 - ô (sometimes written û) becomes a, e. g., mô!u, thick, fem. ma!.
 - ô becomes á, e. g., tsôngu, a lamp, instr. pl. tsángiu.
 - ô becomes ô, e. g., khônkhu, one who speaks through his nose, pl. khônkhu; tôtu, beloved, fem. 184.
 - ô becomes û in verbs, e. g., sôzun, to send, aor. sûzu.
 - \hat{o} becomes d in all feminine nouns, $e.\ g.,\ d\hat{o}r$, a beard, pl. $d\hat{a}ri$; also in certain masc pl. forms.
 - yu becomes i, e. g., phyuru, a drop, dat. phiris.
 - yú becomes î, e. g., nyûlu, blue, fem. nîj. Sometimes also, ô, e. g., apazyûru, false, fem. apazör.

With reference to the above it must be remembered that i is often pronounced e, and u, o, and vice versa.

- (6) The soft aspirates gh, dh, dh, and bh have almost completely disappeared, the corresponding unaspirated letters being substituted for them. Thus, gura, a horse, for ghuru, Prakrit ghôdô, Skr. ghôlakah; bôi, a brother = Hindi bhái. The soft aspirate jh has become softened to z, e. g., bôsun, to hear, cf. Skr. budhya-le, Pr. bujjha-i.
- (7) As in other Indo-Aryan Vernaculars, the cerebral a has almost completely disappeared, and a is substituted for it. Thus, kan, the ear, Pr. kanno, Skr. karnah.]

B. THE VERB.

18. Kâśmîrî verbs are quoted in the Infinitive form; thus, كُرُن karun, to do, to make.

The infinitive is, properly speaking, of a shortened form of the Noun of Action in ai ______.

The Root, or Verbal Stem, is always the same as the 2nd person singular of the Imperative; thus, > kar, make.

- 17. As regards form, Verbs are either -
 - (1) Primitive, as کُرُن karun, to make; or
 - (2) Derivative, that is either -
 - (a) Causals, like مُكُلُّن mokalávun, to release (from مُكُلُّن mokalaun, to be free); and Double-Causals, like مارنا وس mâranâvun, to cause to slay (from مرن marun, to die, Causal مرن
 - (b) Denominatives, derived from nouns, e. g., from في bod, 10 great, ويُذُن , bodun, 11 to become great, to increase; or
 - (3) Compound, i. e., used in conjunction with nouns like مُكُم كُوُن hukum karun, to make an order, to command.

In regard to meaning, Verbs are either (a) transitive, or (b) intransitive. Except in tenses formed from the past participle, both are conjugated in the same way. There is thus, properly, only one conjugation.

Formation of Causals.

- 18. The proper formative of Causals is the syllable ! _ av. This is added either
- (a) directly to the verbal stem; e. g., ويَّزُ bachun, to be saved (to remain over and bove); bachavun, to rescue (from the stem في bach); ويار diun, to give (stem so di), causal ويار dyavun. Monosyllabic stems in l, sh, k, and m insert a euphonic r before av: e. g., مَثْنَ balun, to be convalescent, أَلُوا رُو balrāvun (stem مُشُنَ bal بُلُوا رُو mashun, to be forgotten مُشُولُو mashravun, to forget; or
- (b) more usually to the [oblique] noun of action in ai __ ana; e.g., ويَا وَلَوْنَ bozun, to hear, [obl.] noun of action, غَنْ bozuna, Causal بوزناري bozuna, to cause to hear; هُمُن behun, to set, causal مُعَنْ behun, to give a seat to a person, to ask to sit down. Sometimes both forms occur for the same verb; as in the case of مُعَنَّ phujum, to sink, to burst, causal بمُعَنَّ phujum and يَعْنَاوُ phujum, to cause to sink, to drown, to split (active).
- (2) Some verbs merely longthen the root-vowel; e.g., ومن marun, to die, مارى marun, to cause to die, to kill; كيسن harun, to fall, مارى harun, to let fall. Irregular is كياسي khasun, to climb; كياسي khasun, to climb; كياسي khasun, to climb; كياسي

^{• [}It is really the nominative of an oblique base in ang — vide § 19.] 10 [Elmslie, basid.] 11 [Elmslie badun.]

Some verbs have the same meaning both in the Primitive and in the Causal forms; e. g., mutsarun and مجران mutsaravun, to open, الكرية bagrun and الكرية bagravun, to divide,

Infinitive (مصدر) and Noun of Action (السم فعل).

19. [The translator has here considerably altered the author's text, in order to bring it into accord with his subsequent writings, and with the actual facts of the language. At the time of writing this portion of his essay, the author had evidently failed to notice that the Infinitive is, as in other Indo-Arvan languages, a pure verbal noun, having both masculine and feminine forms, and declined, according to circumstances, in the 1st (masculine), or in the 3rd (femiuine). declension. It is used principally in the nominative, dative, ablative and genitive singular cases. The declension is quite regular, viz.:-

(1st declension.)

Masc. Nom. w karun, doing.

Dat. , karanas, to or for doing.

Abl. ' ai's karara, from doing. Used also as a general oblique base.

Genitive کرنگ karanuk. of doing.

(3rd declension.)

Fem. Nom. کونه karañi, Dat., Abl. کرن karani.]

20. The Nominative of the Infinitive can be used as the subject of a verbal sentence; thus, gatshun chku zarûr, to go is necessary, it is necessary to go.

The other cases are formed by changing the syllable un to an, and adding the usual terminations. Thus, کُرن karan, to make, abl. کُرنه karan-a, مارناون maranavun, to slay, able maranavana مارنا, ذه

The verb wis diun or dyun, to give, has, however, its ablative is ding. The following verbs follow eys diun in this irregularity:-

پين peun, to fall.

cheun, to drink.

...; ziun or zyun, to be born.

... kheun, to eat.

niun or nyun, to take, to lead.

heun, to take.

yun, to come.

yun, to come.

E. g., ai yina, from coming.

An example of the dative of the infinitive occurs in the phrases کهنس لایق khenas ld'iq, fit for food; الوننس تام longetas tam, till the harvest (lit., resping) (Matth. xiii. 30). So also after other prepositions which govern the dative, such as منا ander, in ; منا سند, to.

[The ablative appears very commonly, and is frequently used as a mere oblique base, like the Hindustani oblique infinitive. Its uses are as follows.]

- (a) As complement to a verb, whose sense is in itself incomplete, e. g., وين diun, to give, permit; thus, نيُّه دين nina diun, to permit to take.
- (ق) Governed by prepositions which take the ablative; such as عَمَّا لَمُ اللّٰهُ اللّٰهِ اللّٰهُ اللّٰهُ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهِ اللّٰهُ الللّٰهُ الللّٰهُ الللّٰهُ اللللّٰ اللللّٰ
- (c) With loss of the final a in composition with عن vaqta or برن وققه vaqta or برن وققه , at the time of c. g., مرن وققه maran vaqta, 12 at the time of dying; عرض عن gatshan vizi, at the time of going (i. e., as he, she, they, etc., went). But we have also کهنهٔ وققهٔ khena vaqta, at the time of eating [and عینهٔ وقعهٔ prasani (fom.) wizi, at the time of travail].
- (d) To form the Passive, vide §§ 137 and ff. In this case the final a becomes a. Thus, مازنّه ين marana (not marana) yun, to be killed.

The genitive of the Infinitive is usually formed by the adjectival suffix عارُنَك حَكَم uk (fem. عارُنَك حَكَم karanuk, fem. كُرُنْج karanuk, of doing; مارُنَك حَكَم maranuk hukum, an order to kill; مارُنَك هُمَت maranuk hikum, an order to kill;

21. [The feminine form of the infinitive belongs to the third declension. Its nominative hence ends in عن المستري الم

[The oblique feminine infinitive, is used-

(a) when it is governed by feminine prepositions; e. g., s; parsani visi, at the time of travail;

Is According to Math. xiii. 80, the word should be مرن marañi (المرن marañi), not أمون maran. We also أمون maranaki (dat. of genitive) vaqiq.

(b) after الكُنْ lagun, in the meaning of 'to begin to'; e. g., قم لك ديدة tami log dapani, he began to speak.

The Noun of the Agent (السم فاعل).

- 22. This is formed by the addition of the syllable ورول vôl to the oblique form of the noun of action of verbs like كهدوول diun (see above). Thus, كهدوول dina-vôl, a giver; كهدوول thena-vôl, an eater (also written (كهنه رول); pl., dinavôl; fem., sg. ونواجه dinavôj، منواجه dinavôj، منواجه dinavôji, or منواجه dinavôjeñi, pl. هنه رواجه dinavôjeñi, pl. هنواجه sôzan, to send; وول sôzanvôl, a sender. The fem. sg. in vôji is an old form. The usual form at the present day is that in vôjeñi.
- 23. Another form of the noun of the agent is formed by suffixing موزون خوس معند من موزون عمد در موزون - 24. Both these verbal nouns of the agent can be used with a future signification; s e. g., وي yun, to come, يورو yi-v-avun, one who will co.no, that is, who is destined to come, or who may be expected to come.

(To be continued.)

NOTES ON THE SPIRIT BASIS OF BELIEF AND CUSTOM.

BY J. M. CAMPBELL, C.LE., I.C.S.

(Continued from p. 331.)

Light. — Light, the scatterer of the terrors that people the dark, is the chief of guardians. Dionysos is the light and life of the World: 100 Gautama is the light of Asia: Amitiba Buddha is the infinite light: Jesus is the light of the World: the Light of Heaven and of Earth is Allah. A red ray of light from the right eye of Amitiba brought into life Padmaphni, and a blue ray of light from his left eye formed Tara, the enlightener. A beam of light from Padmaphni, the great pitiful, becomes incarnate in the Dalai Lâma.

The Guardian gives forth a light. In the great temple at Tyre Melkarth was adored in the form of a luminous stone.² It is because the spirit of light lives in them that the diamond, the pearl, the ruby, the crystal, and other clear gemsenjoy a worldwide worship as scarers of disease, terror and other forms of evil. Rays of glory issue from the body of Sûrya.³ The babe Krishna brightened the dungeon in which he was born.⁴ Balder was so fair of face and so shining that a light went forth from him.⁵ The face of Moses shone so brightly that he had to wear a veil. In Tibet, the images of Buddha have a glowing halo or nimbus, and

those of the fierce tutelary demons have a flaming halo.6 The Lâma god is born with a halo of glory.7 A flame-like process issues from the crown, or through the suture, of the Caylon Buddha.8 In India, the guardian king shares with Buddha the glory of a nimbus. In Greece, the victim, or the god in the victim, shows. From the three Persian youths, who were sacrificed to Dionysos Omestes, before Salamis (B. C. 430), a bright flame blazed.9 In the guardian Brahman a fire burns. "If there is no fire," says Manu,10 "let the worshipper place the offering in a Brahman's hand, for the priests say, 'Fire is a Brahman'." Again'l Manu says: - "An offering in the fires of a Brahman's month, which are kindled by austerity and knowledge, frees from misfortune even from great sin." From the early Egyptian Etruscan and Roman encircling cloud the guardian's gleam became localised into the Christian nimbus or head circle, and again, in the form of the Martyr's aureole, went back to the vesica piscis, enveloping the whole figure.12 That light was the source of the guardian virtue of the Egyptian good-spirit, the hawk-headed snake Chneph, appears from the Egyptian saying: "When Chneph opens his eyes the land is flooded with light; When Chneph closes his eyes the land is hid in darkness."13 During the centuries before and after the Christian era a mighty flood of Sun-worship spread over Asia, Egypt and Europe under the influence of the religions of Mithras Serapis and Christ.14 It is as the greater and the lesser lights that the Sun and Moon have earned universal worship. The Accadians or early Babylonians (B. C 3009) worshipped the sun as fire, 15 and held fire to be one of the chief of guardians. This faith lasted into later Babylon, where Bel or Merodach was the orderer of good for man, the healer, the scarer of evil spirits.10 The Tibet Lama, gazing at the rising sun, says:-"The glorious One has arisen; the Sun of happiness has arisen; the goddess Marichi has arisen; keep me, goddess, from the eight terrors, - robbers, wild beasts, snakes. poisons, weapons, fire, water, and precipices.17 When the days lengthen with the northing sun, when the nights brighten with the waxing moon, evil influences are driven from among men. With a southing sun and a waning moon the guardian power weakens. and the danger from evil spirits again presses. The horror reaches a climax when, as among the Moxicans, unless some mystic re-birth of light comes to his aid, at the end of one of his cycles of fifty-two years, the sun will rise no more and evil spirits will destroy mankind.18 The light by the woman in child-birth, by the youth at baptism, by the bride and bridegroom at marriage, by the sick, by the dying, and by the dead: the light at the tomb, the lamp in the place of worship, the feasts of lights, of lanterns, and of candles, shew how at every crisis in the life of the individual, at all seasonal changes that endanger public health, the guardian virtue of light puts to flight evil influences. So Herrick in his charm-song :19 "Light the tapers here to fright far from hence the evil sprite." A lamp is an essential offering to the images in a Tibetan Buddhist temple.20 So in the statue of St. Genevieve of Paris (509) an impolies a bellows to blow out the saint's candle, and a demon tries to quench the lantern of St. Gudala of Brussels (712).21 When an Australian tribe passes into a strange land, they kindle bark and sticks to clear and parify the air,23 that is, to scare the local spirits. When a strange prow is wrecked on the island of Timorlant, between Timor and New Guinea, the natives burn the boat to scare the foreign demons.23 In the procession of Isis, the Egyptian priest cleaned a boat with an egg, sulphur, and a lighted torch.34 The Japanese house is purified by fire.25 The ancient Greek signal for battle was the throwing of torches in

front of the army by men called Fire-bearers, priests of Ares.26 An undying lamp tended by widows burned in the Pretaneum at Athens. 27

In the eighth century, Bede (730 A. D.) remarked that the Christian Church had done well to change the lustrations which used to scatter the evil influences of ungracious February for the lights, which in Rome so brightened the churches and the city, that the day of St. Mary came to be known as Caudlemas, the feast of lights.28 But the Candlemas procession of lights has a direct origin in the Roman and Greek walking round the fields carrying torches and candles in honour of Februa and Ceres, a rite which still continues in France.29 The old Slav and German guardian Swanto Wit or Holy Light, whose worship lasted till the ninth century, was then Christianized into the worship of St. Vitus, the boy-martyr of Rome, to whom, in Germany, the fiery sun-wheel is still set a-rolling in Midsummer dances.30 In the eighth century, in Germany, to jump over a Need Fire, kindled by rubbing dry wood on St. John's Eve, kept off ill-luck and fever.31 The practice of lighting bonfires from a flame kindled by rubbing wood is still observed on St. John's Eve in Russia. 32 In Ireland, on the 21st June, fires were lit, and every member of the family passed through the fire to get good fortune in the coming year.33 In Scotland, at the beginning of this century, the money presents of boys and girls to the schoolmaster on Candlemas Day were known as bleezes or blases, a memory of earlier candle gifts to the priest.34 In the Western or Latin Church, Christmas as well as Candlemas was called the feast of lights on account of the number of candles that burned at the feast,35 On Christmas mornings, in North-East Scotland, fire and juniper were burned.36 In the North of England (1825), each family had a Yule Candle lighted in the evening and set on the table. A piece of the candle was kept to secure luck.37 In Scotland, on the last night of the year. fire is carried round houses, fields, and boats for luck, that is, to scare evil.38 A third Christian festival of lights was Easter Eve. Constantine the Great (A. D. 330) turned the sacred vigil into the light of day, hanging lamps everywhere and setting wax tapers, as big as columns. all over Byzantium. In the fifth century, one special wax taper was solemnly blessed as a type of Christ's rising from the dead.39 Fires were lighted on Mayday and on St. John's Day (June 24th), and the lantern was one of the many guardian influences on spirit-haunted Halloween (October 31st). Fires lighted on the Transylvanian hills in South-East Austria, on June 24th, guard the flocks from evil spirits.40 In North-East Scotland, the children, who danced round the Mayday bonfires, used to shout:--" Fire blaze and burn the witches."41 A mediæval legend says fires were kindled on St. John's Eve to scare the dragons of pestilence.42 In Forfarshire and in the Isle of Man, sick cattle have to walk over lighted peat or to pass between two fires.43 In England, in 1783, the Roman Catholics used to light bonfires on the hills on All Saints' Night, the Eve of All Souls.44 In Brittany, the fragments of the torches burnt on St. John's Eve are kept as charms against thunder and nervous diseases.45 The

Egyptians held a feast of lamps at Sais in honour of the goldess Neith.46 The ancient Chaldeans, under the mystic name of I.o. adored the physical and intellectual light.47 The Yezedis. or modern Sabeans, hold a festival of lights in honour of Sheikh the Sun at Midsummer, when the men and women pass their right hands through the lights carried by the priests, rub their brows, and touch their lips.49 Both the Chinese and the Japanese have their feasts of Lanterns.49 Tipetans hold a light-feast in early December.50 The Canton river gods are worshipped with an accompaniment of hundreds of fire crackers.51 The Hindu worships light with wise wonder and with thankful heart. His holiest gdyatri prayer is: "Let us think the worshipful Light, may it lighten our souls." According to another text Fire comes as a dear friend : in his presence men sit as in a parent's house. The palas-fed fire, kept in a strict Brahmau's inner room, is the Garhapatva or House guardian.52 Besides his Diwali or lamp-feast, the Hindu dances and sings at Dasahra (September-October) round a garbu or lamp housed in a clay or wooden case drilled with holes. On many great religious nights, both Hindus and Muhammadans lighten their temples and shrines. In India, the evening twilight, dreaded by Hindu gods, is made safe and pure from the approach of the evil Yôginis or Fire-fiends by the arti or waving of lamps and flaming camphor.55 Similarly, the Shans of Southern China, once a year, with gongs and trumpets and with flaming torches, drive out the twilight fire-fiends.54 At a Rajput court, at lamp light, all rise and salute, a practice which was adopted by the Emperor Akbar.55 In the early Christian Church, lamp-lighting was the occasion of a service of prayers and praise. The rosy-fingered dawn drives away evil spirits and brings health.56 "Demons." says the Tibetan proverb, "cannot move except in darkness." In Western India, lamps are waved round the sick, and flaming camphor is held in front of the faces of the possessed. The lighted candles of the Christian altar, for which the Greek, the Roman, and the Jewish ritual furnish precedents, find a further parallel in the lighted candles on the altar table of the Chinese emperor. 59 Of guardian lights at child-birth, an example is given in the chapel of the Bologna University, where, in the fresco of the birth of the Virgin Mary, a woman holds a lighted candle close to the mother's face. 19 Pericles mourns that his wife died in child-birth at sea without fire and without light.60 In Ireland, no fire should be given out of a house in which a woman has been lately confined.61 The poet Herrick (1650) refers to "the tapers five that shew the womb shall thrive."63 In eighteenth century Scotland, women in child-birth were purified or sained by being crossed by a fir-candle.63 In Brazil, when a girl comes of age, and has to leave her hammock, she rides on the back of a female relation, carrying a live coal to keep evil influences from entering her body.64 In rural Scotland, Ross65 describes how-

> "A clear burnt coal in the hot tongs was ta'en Frae out the ingle-mids for clear and clean, And through the corsy-belly 66 latten fa For fear the weeane should be ta'en awa."

In the Scottish Highlands, a live peat was carried sun-wise round the mother and unbaptised child to keep off evil spirits. And the newly baptised child was handed thrice across the

fire.67 Fire was carried before the Roman emperor, and, in the provinces, before the magistrates.68 Sacred fire was carried before the kings of Asia,69

In South-East Africa, Mashona boys greet the new-born moon by throwing lighted brandinto the sky. 70 In England, the birth-day cake is gnarded by lighted candles, one for each year of the life of the hero of the day. Compare the Greek cakes to the lonely Full Moon called amphiphontes because lighted candles were set round them. 71 The fourth century Christians had baptismal lights. In A. D. 500, when certain Jews were baptized at Auvergne, candles blazed and lamps shone." At the baptism of Theodosius the Younger (A. D. 401), so many carried lights that the stars might be supposed to be seen on earth.73 Light was used to keep cyil from the unbaptised. In the Hebrides, until it was christened, a flaming torch was three times a day carried round the new-born child."4 So the body of the baby-daughter of the Scottish king was swathed in fine linen and laid in a gilded casket with salt and a light.75 The Egyptian bride was escorted with torches and songs.76 At Roman weddings, many wax tapers were lighted at noon.77 In the fourth century, when nuns offered themselves to be veiled, they passed among the blazing lights of the neophytes as if to become the brideof Christ.78 One of the leading rites in the early Christian marriage was the wedding-pomp, when, with torches, lanterns and singing, the bride was led to the bridegroom's house. 79 At a Japanese wedding, it is not lawful to snuff the candles.80 The Chinese bride is carried into her husband's house over a pan of live ceals. The Scottish bride, on entering her husband's house, is given a pair of tongs to stir the fire. 82 The Mongol bride is carried thrice round a fire, and is then led to her husband.83

The Greeks, except the Athenians, had their funerals by day, for during the night furies and evil spirits were abroad. At the funeral, though it was day and though they buried and did not burn their dead, the mourners carried torches. A lighted lamp was also placed with the dead in the vault, 54 a practice which was continued by the Christian buriers in the catacombs at Rome and by the placers of candles in Middle Age Christian coffins.85 The early object of these funeral torches is shewn among the Greenlanders, where a woman waves a fire-brand behind the corpse, and tells it not to come back, and by the Siberian Chawashes who fling a red hot stone after the corpse to bar the soul's return.86 The Jews burn a candle at the head of the dead.87 In every section of the early Christian Church, lights, both stationary and processional, were used at funerals. The lights round the body of the sun-worshipping Constantine (A. D. 340) made a show such as the world had never seen.88 At Chrysostom's funeral (A. D. 438), the mouth of the Bosphorus was covered with lamps. 89 At the death of Justinian (A. D. 585), mournful bands carried funeral torches. 50 At Paris (A. D. 585), King Guntram buried his grandson with the decoration of innumerable candles. In the north of Scotland, a candle or two used to be burned near the dead. A light is kept burning when a dead Parsi has been laid out. 93 A lighted candle is set near the Corean coffin. 94 The Andaman islanders kindle a fire on their dead chief's tomb to keep off evil spirits. 95 The burning of lamps and other lights at tombs is common to Hindus, Musalmans and Christians. "I'm sure," says Herrick, "the nuns

will have Candlemas (that is a show of lights) to grace the grave." At several Christian tombs in western Europe, the lamp gave a perpetual light. Within the tomb of the magician, Michael Scott, burns a wondrous light to chase the spirits that love the night. 98

No Hindu, Musalman or Roman Catholic temple or shrine is without its light. In Babylon. in Rome, in Jerusalem, and in Egypt, during the performance of religious rites, candles were burned. 99 Russian churches are full of lighted tapers and candles, 100 The Christians of Western Europe, in the sixth, seventh and eighth centuries, burned candles and lamps before their sacred images and pictures, "the visible light being a symbol of the gift of the divine light." Lights and incense were also burned before the elements, the life-giving cross, the halv gospels, and the other sacred ornaments.2 The St. Petersburg Russian peasant of the present day, having for the good of his body invested five farthings in his hot bath, for the benefit of his soul invests a like sum for a taper to be set before the shrine of some favourite saint. The Tungusians near lake Baikal in Siberia, burn wax tapers before their gods; in the Molucca islands, wax tapers are used in the worship of the Nito: in Cevlon, wax candles are burned before Buddha. The earliest known form of Venus or Aphrodite is in Paphos, a ball in a pyramid surrounded by burning torches.⁵ Among the Greeks a sudden or unusual splendour was lucky; darkness was unlucky.6 The rites to the gods of the under-world were performed at night.7 As in the Catholic Church the water of Baptism is purified by dipping a candle into the font, so it was with the classic Greeks. The holy water at the entrance to the Greek temple, which was sprinkled to purify all who came in, was consecrated by putting into it a burning torch from the altar. The torch was used because light purifies all. So a priest purified the newly launched Greek ship with a lighted torch, an egg, and brimstone. In Middle-Age Europe, magicians and heretics were burnt alive in order that the fire might scare the devil that possessed them.10 This remedy was at one with popular witchcraft cures. In a 1603 witch trial, an old woman stated she had burned alive one hen because a witch had possessed all her hens, and in the same trial, a farmer stated he had burned a pig alive, and thereby scared the witch's familiar.11 In much more recent times, in Cornwall, the father of an overlooked, that is, of a bewitched child, went to the witch's house, tied the witch down, piled furze in front of the door, fired it, and passed the witch-possessed child over the furze flames.12 Before their sacred images, the Chinese keep burning candles and joss sticks. 13 As has been noticed, Hindus scare the dreaded yôginis, or twilight hags, by waving flaming camphor in front of their gods. If a Hindu goes out in the dark he repeats charms, touches his amulets, and carries a tire brand to keep off evil spirits.14 If a Scottish Highlander has to pass through a churchvard he will carry a live coal. 15 In Ireland, a live coal keeps fairies and other evils away at night. 16 In North Scotland (1800), a live coal is dipped into the water in which a newborn child is washed.17

The Hindu belief, that the waving of lights cures sickness and that flaming camphor is specially helpful in driving evil spirits out of the possessed, finds a parallel in the Christian girl, who (A. D. 587) expelled a sickness by holding in front of her a burning candle, and in a man, who, recovering from an ague, held lighted candles in his hands all night long. Similarly, oil from a lamp burning in a Church at Ravenna cured the eyes of two believers. In Germany, fire was struck out of a flint on erysipelas. And the cattle were

driven through the holy Need Fire to keep off sickness. German mothers put their children in the oven to cure fever, and lay in an oven a child who does not grow to drive out of him the dwarfing spirit of the elderling,20

As regards lights at festivals, according to Bede (A. D. 730), the English practice of keeping a candle burning all through Christmas Day goes back to fore-Christian times, when, on the eve of the winter solstice, the Saxons used to light great candles and kindle the Yule Clog.21 Lighted candles were also used ceremonially by the Germans before they became Christian.22 In Ripon, in Yorkshire, on the Sunday before Candlemas Day, all the afternoon the collegrate church is (1790) ablaze with lighted candles.23 In Rome, after sunset on Shrove Tuesday, everyone carries a lighted taper and tries to blow out his neighbour's light.24 During Easter-week the Pope worships a cross of fire over St. Peter's tomb.25 According to the Greek Christians, on Easter Day in the Church of the Holy Sepulchre, in Jerusalem, a magic light from above kindles the candles.26 According to the traveller Coryate, in 1614, except the Latins, all Christians in Jerusalem at Easter prayed that the Holy Ghost might come from heaven in the visible form of fire. After great processioning the Patriarchs of the Greeks and Armenians went into the sepulcure. A priest passed into the grottoe. After a quarter of an hour he came forth with his tapers lighted. So great was the rush to get a light that the priest was nearly stifled.27 At Durham, the great Easter candle, called Paschal, was lighted by flint and steel with a consecrating rite, and from it all other candles were kindled.28 So it is with the Paschal taper carried before the Pope, parts of which are kept as charms.29 In Transylvania, on Easter Eve, witches and demons are abroad. Every man must attend the midnight service and hold a lighted wax candle. Afterwards, if what is left of the candle is lighted during a thunderstorm, it will keep the fiend lightning from striking the house.30 In London, on Midsummer Eve (June 24th), and on the Eve of St. Peter and St. Paul (June 28th), every man's door was shaded with green birch, long fennel, St. John's wort, orpin, white lilies and the like ornaments with flower garlands. Glass oil-lamps were kept burning all night, covering the branches with hundreds of lights.31 So, among the Circassians, the holy pear-tree is hung with candles. 32 At the hottest time of the year the grove of Diana at Nemi, near Rome, was lighted by a multitude of torches.33 In Rome, before the Church was eclipsed by the Italian Government (1869), an illumination took place when a new Cardinal was appointed.34 At the crowning of the Eastern Christian Emperors and at the throning of the Pope, a wisp of flax is lighted and burnt before the eyes of the enthroned.36 At the feast in honour of the dedication of the temple by Judas Macabæus (B. C. 160), the Jews lighted one candle the first day, and one more each day till seven were lighted.36 A lamp was always burning in the Jewish tabernacle; a lamp still burns in the Synagogue.37 The prophetic stones on the High Priest's breast-plate were called Urim or Lights.38 The undying fire on the altar of Solomon's temple couched like a lion and shone like the sun. Its solid pure and smokeless flame consumed alike the wet and the dry.39 In the fore-Christian Jewish catacombs at Rome, on each place for a body, is scratched the image of a seven-branched candle-stick. 60 When an early Christian Church was consecrated twelve candles were lighted.41 the Japanese lantern feast, lighted lanterns are launched on water to ascertain the fate of dead friends.43 At the Chinese feast of lanterns, on the fifteenth of the first moon, that

is about March, all hang lanterns in front of their houses. The Chinese have passed from the stage of scaring the dreaded dead to the stage of pleasing the beloved dead. In Canton, during the yearly festival for the unmarried dead, after dark, boats glide down the river a mass of lanterns. In front and at the sides of the lantern boats are small fire boats. In the front fireboat a gong is beaten to attract spirits. In the big lantern boat priests chant hymns and throw burning paper clothes and paper money into the river. The paper clothes and paper money are supposed to be refined by fire so as to be useful to the naked craving unwed ghosts who float on the water. Oil lamps in clay vessels are drawn after the lantern boat to serve as guides to the spirits.

For more than 300 years after Christ, the use of ceremonial candles, torches and lamps in Christian Churches was not general. Tertullian (A. D. 205) and Lactantius (A. D. 303) scoff at the use of lights by day. 'The early gods,' they say, 'need lights' because being of the earth they are in darkness.' 'Let us not blaze,' says Gregory of Nazianzen (A. D. 373), 'like a Greek temple at holy moon.' The ceremonial use of lights in connection with Christian worship is supposed to have begun with the placing of a light on the tombs of martyrs and with the illumination of churches on high days. By the eighth century the blessing of the lamps and candles on Easter Eve was a widespread ceremony. The font was baptized with lights, and the early converts, after baptism, held a lighted candle. Lights were kindled when the Gospel was read, and lights were carried at funerals and hung over graves. Candles and lamps were also lighted before pictures and images, and were presented as a thank-offering on recovering from sickness. '5 Other early fire rites were forbidden. In A. D. 680, a council penalized the kindling and the leaping over fires in front of workshops and houses at the time of new moon. '6

Few people have shewn a more marked trust in light as a guardian against evil spirits than the Mexicans. The chief Mexican dread is the great day at the end of the cycle of fifty-two years, when the sun may rise no more, and man may be left a helpless prey to evil spirits. To prevent man's ruin, the only hope of the Mexican priesthood was by raising a new light or fire to scatter the evil influences that might prevent the sun from rising. To raise a new fire on the evening before the dreaded day, the gods, that is, the priests in the garments of the gods, leaving their shrines and temples, marched forth to a hill-top. And, when the kindly influences of the Pleiades were at their strongest, on an altar on the hill-top, the chief priest slew a human victim and on a wooden shield fastened to the victim's chest kindled fire by rubbing. From the New Fire a great pyre, on which the victim was laid, was kindled, and from the pyre-flame torches were lighted, and the New Fire was borne speedily by special runners over the whole land. The dawn and the sunrise of the next morning shewed that the virtue of the guardian light had prevailed. The gods marched back to their shrines, the temples were cleansed, the people dressed in festive garments. Light had routed evil and saved Mexico from ruin.47

The above examples illustrate the working of two leading religious laws; that the Guardian is the squared fiend, and that the Guardian needs guarding. Though so great a guardian, light, like fire, has failed to free itself from its early shadow, the fiend-element, known to the Hindus as the bideous iron-tusked Kravyûd, 48 that underlies its guardian nature. To the Egyptian fire was a wild beast. 49 The Hindu and the Shân agree that the blaze of camphor and the flare of torches are required to scare the twilight fire-fiends. To the Hindu the morning sun is Vishan the preserver, but the midday sun, the terror that walketh at noon-tide, is Mabâdêv the destroyer. So the lesser lights that inlay the floor of heaven, though grouped by faith into guardian shapes, shoot baneful glances at mankind which have to be soothed by the star which rules the moment of each man's birth. With the Greeks and Romans,

St. Elmo's or St. Erasmus' fire, the electric fire balls that settle on ships' rigging in a storm. were the genial guardians Castor and Pollux. Lightning, on the other hand, was a fiend defiling what it struck, to be driven away in classic fashion by a hiss or in early Christian fashion by the sign of the cross, by prayer, and by the sprinkling of holy water. 50 Under this application of the principle of Dualism lies the great law of religious development, the guardian is the squared-fiend, a phase of early belief which is alive and orthodox in the Defenders of the Faith. Tutelary Demons. or Guardian-Fiends who play so leading a part in Tibet Buddhism.51 Again, the above examples illustrate the law, the Guardian needs guarding. The position and surroundings of the Guardian, well housed, tended with care, treated with honour, make the Guardian a specially tempting lodging for the hosts of unhoused wandering spirits. So, when the Chinaman, and also the Tibetan Lama, has prepared all parts of the image with elaborate care and ritual, when the sculpture is completed, he has an anxious formula to prevent the entrance of a wicked spirit into the sacred image. 52 By the use of the spirit-scares, spirit-traps, spirit-scapes, and spirit-prisons, known as ritual and decoration, priests and worshippers do much to guard the Guardian from the trespass of unclean lodgers. However complete the theory, however sleepless the practice, these precautions cannot fail to fall short of perfection. In annoyance at intrusion, it may be stained by the spirit of the intruders, like the sun shorn of his beams at the close of day and at the opening of winter, like the Leader whose guardian force ebbs till it is lost in death, the Guardian ceases to guard. So, when the sins of the Hebrews were forgiven, that is, when the haunting evil spirits were scared, the High-priest's breast jewels shone bright. When the sins were not forgiven, that is, when the air remained heavy with evil influences, the gems became black.53 From the recurring dangers of seasonal fiend-swarms, from the sudden blow of the plague demon, a young fresh untarnished Guardian can alone save man. The necessity of a new or a renewed Guardian explains the practice, perhaps even the name, of the Celtic and German Need Fire: it explains the fire kindled through a crystal ball at the Eleusinian mysteries; 54 it explains the Catholic flint-lighting at Easter, and the Catholic blessing of candles: it explains the Mexican and Peruvian re-birth of the sun. The early experience that, through failure of his guarders to guard him, the Guardian spirit dwindles and dulls through the housing of evil influences is recorded in the magical phase of early religion. According to Reginald Scott, the success of the ceremonial use of fire by the Middle-Age European exorcist was made doubtful by the chance that evil influences had taken their abode in the guardian fire. Before using fire, says Scott, let the exorcist repeat these words: "By Him that created heaven and earth and is God and Lord of all I exorcise and sanctify thee, thou creature of Fire that immediately thou banish every phantom from thee."55 The belief, that the aged out-of-date guardian not only ceases to guard but becomes a fiend-home, is shewn in Herrick's Ceremony on Candlemas Eve:-

"Down with the rosemary and so
Down with the bays and mistletce,
Down with the holly ivy all
Wherewith ye dressed the Christmas hall,
That so the superstitions find
No one least branch there left behind:
For look how many leaves there be
Neglected there, maids, trust to me,
So many goblins you shall see." ""

⁵¹ Waddell's Buddhism in 'Tibet,' pp. 363-365. Besides, in Tibet, the idea, that the guardian is the squared fiend, is familiar in the Indian Durgh and Siva and in the Greek guardian-fury of the Medusa. Even the Mother, the tenderest of guardians, is pestilence among Hindus and madness among Romans and English: "How this Mother swells up towards my heart," King Lear, Act II. Scene IV.

Details of the kindling of Need Fire in Scotland, as late as 1810, to stay murrain are give in Napier's Folk-Lore, p. 84.

** Horne's Hasperides, p. 203.

Like the re-birth in the Need Fire and in the Flint-spark, like the Mexican and Peruvian renewal of the youth of the Sun at the close of his span of fifty-two years, the Dalai Lâma, for the good of man, sacrifices his yearning for absorption, and, by certain signs, shews in the body of what babe he has been pleased to endure the penalty of re-birth. So the Guardian spirit of the dying king passes either into the king's son, or, through some sacramental channel, enters the body of the chosen successor. The king is dead; long live the king: the Guardian is dead; the Guardian lives.

(To be continued.)

FOLKLORE IN SOUTHERN INDIA.

BY PANDIT S. M. NATESA SASTRI, B.A., M.F.L.S.

No. 40. — Ebhya the Learned Fool (a Noodle Story).

In the town of Mânâmadurai, in the Pâṇḍiyan country, there lived a young Brâhman. named Êbhya, who was a fool. He was married to a girl in Madura. Êbhya was a learned man, as he thought, in his own way, and like Śakâra, in Śūdraka's play, could always quote Sańskiit verses and rules, as authority for all his actions. He wished to see his wife. He therefore started for Madura. On his way, he saw the dead body of an ass lying neglected in the way.

"What," thought he, "this was a living being. It had no friends in this world. There is no one now to bury it or cremate it, and it is, therefore, lying thus neglected in the dead stage of its existence. If I do now the meritorious action of cremating this dead ass I obtain the boon of having performed asvamedha (horse-sacrifice). For does not the sage say:—

Andthaprétasanskáram asvamédhaphalan bhavét.

The cremating of an ownerless dead body is equal to the performance of a horsesacrifice.

Why should I not thus in an easy way obtain that? What have I to do here? It is not much. Fuel is easily obtained in the jungle. I have only to carry the dead ass to a good distance in the jungle, away from the common path."

Thus thinking, Ebbya lifted up the dead animal and essayed to carry it into the jungle He struggled hard. It was a very heavy weight. But then, how could merit be obtained without exertion and trouble? Alas, the weight was more than his strength could bear, and he did not know what to do. The merit, however, must be obtained, for he had found out the easiest way of attaining it. A horse sacrifice is a very costly thing which only monarchs may attempt; whereas without any such cost, and by merely collecting the fuel necessary in the wood, and by cremating a dead ass he could now attain that merit.

The wisdom of Ebhya was never at fault, and he at once found means for getting out of his new difficulty. The atterance of the sages that the head is the important member of the animal-body rushed into his mind:

Sarvasya gátrasya sirah pradhánam.

The head is the chief of all parts of the body.

He praised his memory and his ready wit, and at once with a small knife he severed the head of the dead ass from its trunk. And having now secured the head he proceeded on his way to reach a spot in the jungle where the cremation could take place without nuisance to travellers. But for this he had a long way to go and the severed head became a repulsive thing

to carry. But the undertaking was nevertheless not to be given up. So he quoted to himself another saying and it ran thus:—

Sarvéndriyándin nayanam pradhánam. The eye is the chief of all the senses.

Under this rule, Ebhya laid down the head and pulled out its two eyes only, and proceeded on his journey. Soon he reached a lonely part of the wood, where he cremated the eyes of the ass with all the formalities of a funeral rite. Thus by an easy way and at no cost but that of a few dried sticks, which the woods supplied him with, he obtained the merit of a horse-sacrifice.

According to the Hindu rules, a person who has performed a funeral rite is affected with pollution for ten days. So Ebhya, without any mark on his forehead and with his locks untied, and with other marks of mourning, entered his father-in-law's house just at evening time. The first relation he met was his mother-in-law in the court-yard of the house. She was just finishing her evening bath in that part of the house, as she did not expect any body then, and had by mistake left the outer door ajar instead of bolting it. Ebhya ran up suddenly to where she was bathing, and falling on the ground paid his respects to her according to the Hindu way of the namaskara, for does not the rule say—

Drishtamátram namaskuryát évaérún évaéuram éva cha. Worship your mother-in-law and your father-in-law soon as you see them.

Under this authority the son-in-law did his duty. He did not care for the occasion, time, and place. The strict rules were to him venerable authorities, and he rigidly observed them. His agitated mother-in-law first took him to be an impolite young man, and then toned down her opinion at the stupidity which she soon discovered in him. Thus, with this introduction our hero entered his wife's house.

After thus paying his respects to his wife's mother, Ebhya went to a big hay-stack in the middle of the court-yard, and, mounting it, sat on the top of it, for he had heard the rule that people on elevated places are always respected:—

Uchchaih sthánéshu půjyanté. They worship those placed on high.

So to extract respect he chose that spot. His brothers-in-law, for he had three such relations, soon returned home, and their mother directed their attention to her son-in-law on the top of the hay-stack.

"Our namaskáras (respects) to you, O son-in-law? When did you come down? Why do you sit there? Descend, please," said they, and after thus receiving the respect he thought due he came down. But he did not mingle with the company. He stole up to a corner of the hall, and stood apart.

- "Why do you thus stand aloof? Come near, please," said the brothers-in-law.
- "I am polluted," was the reply, and this was given out with all the sincerity of a mourner with low voice and dejected face. Not wishing to extract the cause of the mourning from his own mouth, the brothers-in-law went in and asked their mother whether she knew anything about it. She was not able to enlighten them, but gave them enough of information to make them all suspect that something was wrong with the brain of her son-in-law. The brothers, not believing his statement entirely, approached Ebhya, and asked him to be more plain. Ebhya then narrated the details of his journey. But, as it was his first visit they did not like to displease him. So they mildly tried to convince him of his foolishness, and though he was beyond conviction he went through the formality of mingling with his wife's relations. Grand preparations were then made in the house to feed the newly arrived guest.

"Is there anything that you specially like which we should order to be cooked?" asked

"Nothing," said Ebhya; "but I wish all vegetables to be flavoured with castor oil, for Dhanvantri—the master of medicine—has said that castor oil is the destroyer of wind—frandatailash vátaghnam."

The dinner time approached. Scented oil to rub on the body and lukewarm water to bathe in were placed in the court-yard, and according to the Hindu custom Ebhya was requested to undergo this happy bath (mangalasnāna), and prepare himself for the meal. Refusal would have been regarded as extremely impolite, so Ebhya bathed and had the scented oil rubbed over his body. Now the rule runs:—"pravāhābhimukhan snānam — bathe facing the current," and how was this to be done in a court-yard with all the water available stored up in a big vessel? But Ebhya would not give up his rules; so he upset the vessel, and running to the end of the yard, where the water would find its outlet, laid himself down on the ground to let it pass over his body. The brothers who witnessed this mad act did not understand him for a moment. They were stupified by these unprecedented actions. But as they had contracted relationship with Ebhya, they merely mildly rebuked him, and gave him fresh water to bathe in.

At last even the dinner was over and then, at bed-time, his beautiful young wife for the first time was sent into his room. Now the saying is — "bhāryā rūpavati šatruḥ — a beautiful wife is an enemy." Ebhya saw she was very beautiful, and at once concluded that a beautiful wife must always be an enemy. He looked round him and found a small iron wire with which lamps are trimmed up. He took hold of it and making his wife sit by him he thrust it into one of her eyes. The pain was more than she could bear. She raised a cry and her brothers, suspecting something serious, ran up to the door, which was bolted inside. They knocked, but Ebhya would not open it. He was not going to stop there. He took up the light and gazed at her writhing in pain.

"You are no more beautiful. You are no more my enemy. You are my good friend and chaste wife from this moment," said Ebhya.

"Open the door for God's sake," roared the brothers, but Ebhya had not completed his idiotic proceedings. He surveyed his wife a second time. She had still one eye. The saying is "ckākshi kulanāini — the one-eyed woman is a destroyer of the family;" so Ebhya put out the remaining eye also. The doors were now rooted out by force, and the wretched blind girl discovered.

"What hast thou done, thou scoundrel, thou idiot, thou ass?" roared all the people. Ebhya in his own cool way quoted authorities for his actions. They thrashed him from head to foot.

"I am lord of my own wife, and who are you to beat me?" said Ebhya in reprimand.

"Come out, you fool, we will take you to the king," cried they. And Ebhya, not giving up his own rights, said: —

"Very well, proceed; let us go to the king himself, and let me see whether he will deny the rights of a husband over his wife."

Thus they all went that very night to the palace. Everything in the streets, even every dog, was sound askeep. The palace and the harem was reached, and the crowd stopped outside; but Ebhya went on undaunted, for he was a fool, and he had no fear of the consequences of his actions. The swiftness with which he proceeded made it impossible for the guards to oppose him without disturbance, and a disturbance in the harem premises was dreaded. The king, if disturbed in his rest, would come down heavily upon the disturbers. So Ebhya, unarrested, entered the very inner rooms of the palace. The queen was sitting there in silence, and with his royal head on her right thigh the monarch was sleeping soundly. Even the air feared to blow hard there, for such was the dread the king inspired. Silence reigned. Ebhya,

undaunted, placed his head on the queen's left thigh, and, stretching his body in a direction opposite to that of the king, fell asleep. What could the poor queen do? If she spoke and thus disturbed her lord in his sleep she would verily lose her head. But the monarch's sleep was soon disturbed; our here was a great snorer. The king rose up in a great fury, and a strange spectacle met his sight. A man asleep on the king's own bed with his head in the queen's lap! He gave a push to the impertinent head, and £bhya rose up.

"How came you to dare this impertinence?" asked the king. Ebhya came out with his long story, and the crowd of people, which had collected, caused the king to go outside. He now grasped the whole position.

"But what made you sleep in that posture?" roared the king. Undaunted, Ebhya replied: — "'Yathā rājā tathā prajāh: —as is the monarch so are the subjects.' You slept in that posture, and so I did under the authority of that rule."

The monarch's anger was changed into laughter. Even the fierce king pitied the helpless idiot, who was so ready with his misapplied quotations. And thus ends the story.

NOTES AND QUERIES.

TELUGU SUPERSTITIONS.

- 1. IF it rains continuously for three or four days and the female members of a Telugu family are thereby prevented from leaving the house for marketing, a small female child is sent out naked into the rain with a burning piece of wood in her hand, which she has to shew to the rain. The rain is then supposed to cease.
- 2. If a man suffers persistently from intermittent fever for a long while which he cannot shake off, he must hug a bald-headed Brahman widow at the first streak of daylight. He is then cured.
- 3. If a man suffers from ophthalmia, he should watch the reflection of his face in a pot full of oil belonging to an oil-seller, if he wishes to be cured.

The repeated failure of these specifics has had no effect on their universal popularity.

- 4. Emaciation follows the touch of the housebroom, while used in sweeping out the house, so in Telugu houses every body is asked to keep out of the way of the broom while the house is being swept out.
- 5. If it rains steadily for three or four days, a man throws a piece of steel at the god of the rain to make him kindly disposed and stop the rain.
- 6. "Never spit on ordure: it will give you sore throat," say the Telugus.
- 7. If a puppy runs between the legs of a child, it will suffer from dog-worms (kakku nattala).

Such superstitions must and do constantly fail, but they are as popular as ever all the same.

M. N. VENKETSWAMI.

Nagpur, C. P.

BOOK-NOTICES.

Apastambiyadharmasütram, Aphorisms on the Sacred Law of the Hindus, by Apastamba, ed. by Dr. G. BÜHLER, C. I. E., 2nd edition, revised. 2 parts, Bomb. 1892, 1894.

THE first edition of the present work, published in 1868 and 1871, was an editio princeps, and has materially aided the progress of Sanskrit scholarship in one of its most important branches, the Dharmasatra, Apastamba's Dharmasatra being the best and most authentic specimen of the ancient collections of religious and civil laws which originated in the Brahmanical schools of India, The various important questions concerning the position of Apastamba's manual of law smong

other works of its own class, and among the other writings attributed to the same author, its age and origin, style and language, have been amply discussed by Prof. Bühler in the introduction to his translation of Apastamba, in the second volume of the Sacred Books of the East. I may confine my remarks, therefore, to the main features of the present new edition of the Sanskrit original of Apastamba's law book and the commentary on it.

The "Critical Introduction," which is at least five times as extensive as it had been in the previous edition, contains valuable new information, both as regards the work of Apastamba

himself and of his commentator. To begin with the latter, the proofs furnished by Prof. Bühler that Haradatta cannot have lived later than about A. D. 1450-1500 are convincing. The question as to his identity with Haradattamiśra, the author of the Padamañjari, who is quoted by Sâyana, has been left open by Prof. Bühler. It has been answered in the affirmative by Aufrecht in his Catalogus Catalogorum, s. v. Haradatta, and the Sarvadarsanasanaraha reference to Haradatta which is given in the same work (see p. 104 in Gough's transl.), renders it extremely probable that Sayana-Madhava was acquainted with the writings of Haradatta who must have lived, consequently, about 1300 A. D. An examination of those references to the opinions of Haradatta which may be collected from Eggeling's Catalogue of the Legal MSS, in the India Office Library tends to confirm this view. Thus he is quoted in the Prayogapárijáta, Vidhánapárijáta, Víramitrodaya, Govindárnava, Smrtikaustubha, and Chaturvimsatimatavgakhayana. The importance of the reference to Haradatta in the Viramitrodoya, which was composed in the first half of the seventeenth century, has already been brought out by Prof. Bühler. Nearly all the other works1 also belong to the same century, except Nysimha's Prayogapūrijāta, in which Haradatta's commentary on the Apastambasútra is distinctly referred to (Catalogue of the T. O., 3, 416). Though Dr. Burnell has certainly gone too far in making of Nysimha an author of the twelfth century (Tanjore Cat., 131), he cannot be placed much later than about 1400 A.D., as an old MS of his work is dated Sam. 1495; it is true that he refers to the Pardsaranyakhyd of Mådhava, who flourished in the second half of the fourteenth century. The early MS, in question has been noticed in R. Mitra's Bikaner Catalogue, p. 439. The fact that Haradatta is mentioned by an author of the early part of the fifteenth century strengthens the supposition that his writings were not unknown to the most eminent writer of the latter part of the fourteenth century.

The early date and high standing of Haradatta tends to justify the method observed in the present edition, as indeed in the former one, of giving the text of Apastamba's Sutras as established by Haradatta. This method precludes the conjectural emendation of many ungrammatical forms and phrases, tempting as it may seem to substitute grammatically correct forms for the "medley of Vedic, classical and Präkytic forms" in the present work.

We are looking forward very much to Prof. Bühler's promised full discussion of the language of Apastamba. For the present, we are glad to obtain the valuable evidence regarding it, which he has collected from the quotations contained in Apararka's commentary of the Ydjñavalkyasmrti, and Yadavaprakasa's Vaijayanti, as well as from the various new MSS. used for the notes to the present edition, and from the various readings of the Hiranyakesi-Dharmasútra making up the second appendix.

The new MSS, used are six in number, and the total of the MSS, underlying this new edition amounts to thirteen. In the editor's pedigree of these MSS. the Grantha copies occupy the most prominent place, and appear to have enabled him to reproduce, as closely as possible, the text settled by Haradatta. The interpolations and false read ings in the other copies seem to be due principally to marginal notes having crept into the text of the Sútras, and to the influence of Hairanyakeśa Brahmans who substituted the readings of their own Dharmasútra for those of Apastamba's Both works were closely related from the first. as may be gathered from the above-mentioned varietas lectionis at the end of the volume under notice.

Owing to the new materials used and new principles adopted in preparing the present edition, it differs in many places from its predecessor. Most of these alterations, however, are important in point of language only, and consist either of the substitution of obsolete and ungrammatical forms for ordinary ones, or of corrections, a certain portion of the latter having been first proposed conjecturally by Dr. Böhtlingk in the Journal of the German Oriental Society. It may not be out of place here to advert to a valuable essay published by Dr. Winternitz in the Memoirs of the Vienna Academy for 1892 on Indian Marriage Ceremonies in which the language of Apastamba's Grhyastira has been discussed very carefully, the results agreeing with those arrived at by Prof. Bühler for the Dharmastira.

The second volume of the work under notice, like the first, is not a mere reprint of the previous edition, the new MSS. used for the extracts from Haradatta's commentary having suggested a good many alterations, additions, and omissions. Another new feature of the same volume is the complete *Index Verborum* by Dr. Th. Bloch, an able and learned pupil of Profs. Windisch and Bähler.

J. JOLLY.

ON A RECENT ATTEMPT, BY JACOBI AND TILAK, TO DETERMINE ON ASTRONOMICAL EVIDENCE THE DATE OF THE EARLIEST VEDIC PERIOD AS 4000 B. C:

BY THE LATE PROFESSOR W. D. WHITNEY, OF YALE UNIVERSITY, NEW HAVEN!

A T a meeting of the [American Oriental] Society nearly nine years ago (October 1885), I criticised and condemned Ludwig's attempt to fix the date of the Rig-Vêda by alleged eclipses. The distinguished French Indianist, Bergaigne, passed the same judgment upon it at nearly the same time (Journ Asiat. 1886). Although the two criticisms provoked from Ludwig a violent and most uncourteous retort (see his Rig-Vêda, Vol. VI. p. x.), his argument appears to have fallen into the oblivion which alone it merited.

Within the past year, a similar attempt has been made, independently of one another, by two scholars, one German (Prof. Jacobi, of Bonn, in the Festgruss an Roth, 1893, pp. 68-74) and one Hindu (Bâl Gangādhar Tilak, The Orion, or Researches into the Antiquity of the Vedas, Bombay, 1893, pp. ix., 229, 16mo.), working along the same general line, and coming to an accordant conclusion: namely, that the oldest period called Vedic goes back to or into the fifth millennium before Christ —an antiquity as remote as that long recognized for Egyptian civilization, and recently claimed, on good grounds, for that of Mesopotamia also. This is a startling novelty; as such, however, we have no right to reject it offhand; but we are justified in demanding pretty distinct and unequivocal evidence in its faver, before we yield it our credence.

The general argument may be very briefly stated thus: The Hindus (as also the Chinese, the Persians, and the Arabs) had a lunar zodiac of 27 (or 28) asterisms, rudely marking the successive days of the moon's circuit of the heavens. Since the establishment of the Hindu science of astronomy, under Greek influence and instruction, in the first centuries of our era, the series of asterisms has been made to begin with Aśvinî (in the head of Aries), for the acknowledged reason that that group was nearest the vernal equinox at the time. But earlier: in the Brahmanas, etc., the series always began with Krittika (Pleiades), presumably because. owing to the precession, that group had been nearest to the equinox: and this was the case some two thousand and more years before Christ. Some two thousand and more years yet earlier, the equinox was near to Mrigasiras, or the head of Orion; if, therefore, it can be made to appear that the Hindus once began their asterismal system with Mrigasiras, and because of the latter's coincidence with the equinox, we shall conclude that they must have done so more than four thousand years before Christ. But the same sum can be worked in terms of months. The Hindu months are lunar, and are named sidereally, each from the asterism in or adjacent to which the moon is full in the given month: but the seasons follow the equinoxes and solstices d hence the rainy season, for example, began about a month earlier when Asvini (Aries) was at the equinox than when Krittika (Pleiades) was there, and about two months earlier than when Mrigasiras (Orion) was there; and if it can be shewn that the year always commence with a fixed season, and has twice changed its initial month, Mrigasiras (Orion) will thus also be proved to have been at the equinox at a recorded or remembered period in Hindu

I fi have printed this article from the Proceedings of the American Oriental Society for March, 1894, with the full approval of Dr. Bühler because of the articles already published in this Journal on these subjects. I have done so that scholars in India, who may not otherwise hear of them, may be in possession of this great Orientalist's views of these questions, though stated with his characteristic vigor and disregard of the feelings of others.—ED.]

^{*} His language is a follows: "Anything more completely the opposite (Widerspil) of criticism than the judgment which our, in all points well-considered, discussion of the subject has not with at the hands of Whitney and Bergaigne is not to be conceived. It [the discussion] is refused in me single point; the judges do not stand upon the ground of criticism, but upon that of personal and whelly ministified epoceition." Perhaps nothing different from this was to be expected from one who could propose such a theory: Anding nothing to say in its defence, he was obliged to abuse his critics and impute to these personal motives.

history. And this, in one of the two alternative methods, or in both combined, is what our two authors attempt to demonstrate,

Professor Jacobi sets out by finding in the Rig-Véda the beginning of the year to be determined by that of the rainy season. And first he quotes a verse from the humorous hymn to the frogs, R.-V. vii. 103, 9, usually rendered thus: "they keep the divine ordering of the twelve-fold one (i. c., of the year); those fellows do not infringe the season, when in the year the early rain has come": that is to say, the wise frogs, after reposing through the long dry season, begin their activity again as regularly as the rains come. Jacobi objects that dvadaba. rendered "twelve-fold," means strictly "twelfth," and ought to be taken here in this its more natural sense; and he translates: "they keep the divine ordinance; those fellows do not infringe the season of the twelfth [month]; " inferring that then the downright rains mark the first month of the new year. But deddaid does not in fact mean "twelfth" any more naturally than "twelve-fold;" its ordinal value, though commoner, especially in later time, is not one whit more original and proper than the other, or than yet others; and the proposed change, partly as agreeing less with the metrical division of the verse, is, in my opinion, no improvement, but rather the contrary; and no conclusion as to the beginning of the year can be drawn from it with any fair degree of confidence. This first datum, then, is too indefinite and doubtful to be worth anything.

Next our attention is directed to a verse (13) in the doubtless very late siryd-hymn in the tenth book (x. 85), where, for the sole and only time in the Rig-Veda, mention appears to be made of two out of the series of asterisms, the Atharva-Veda being brought in to help establish the fact. The subject is the wedding of the sun-bride, and the verse reads thus: "The bridal-car (vahati) of Sûryâ hath gone forth, which Savitar sent off; in the Maghâ's (R.-V. Aghâ's) are slain the kine (i. c., apparently for the wedding-feast); in the Phalgunî's (R.-V. Arjuni's) is the carrying-off (R.-V. carrying-about: vivdha 'carrying-off' is the regular name for wedding)." The Maghâ's and the Phalgunî's are successive asterisms, in Leo, Maghâ being the Sickle, with a Leonis, Regulus, as principal star; and the Phalguni's (reckoned as two asterisms, "former" and "latter" Phalguni's) are the square in the Lion's tail, or β , θ , δ , and 93 Leonis. Now, as Prof. Jacobi points out, the transfer of the sun-bride to a new home would seem plausibly interpretable as the change of the sun from the old year to a new one; and hence the beginning of the rainy season, nearly determined as it is by the summer solstice, would be with the sun in the Phalgunî's; and this would imply the vernal equinox at Mṛigaŝiras (Orion), and the period 4000 B. C. or earlier.

There is evidently a certain degree of plausibility in this argument. But it is also beset with many difficulties. The whole myth in question is a strange and problematic one. That the moon should be viewed as the husband of the asterisms, whom he (all the names for "meen" are masculine) visits in succession on his round of the sky, is natural enough; but that the infinitely superior sun, made feminine for the nonce (surya instead of surya), while always masculine else, should be the moon's bride, is very startling; nor indeed, is it anywhere distinctly stated that the moon (soma) is the bridegroom, though this is inferable with tolerable confidence from intimations given. Sûryâ is repeatedly said to go (vs. 7d) or go forth (vs. 12d) to her husband (and only vs. 38 to be "carried about:" but for Agni, not Soma), or to go (vs. 10d) to her house; while any people who had gone so far in observation of the heavens as to establish a system of asterisms, and to determine the position of the sun in it at a given time (no easy matter, but one requiring great skill in observing and inferring), must have seen that it is the moon who "goes forth" in the sodiec to the sun. The astronomical puzzle-headedness involved in the myth is hardly reconcilable with the accuracy which should make its details reliable data for important and far-reaching conclusions. The kine for the feast, too, it would seem, must be killed where the bride is, or when the sun is in Magha; then if the wedding-train starts when sun and moon are together in the Phalgani's, which would be ten to fifteen days later, how do we know that they do not go and settle down in some other asterism,

further on? And are we to suppose that the couple move and start their new life in the rains? That is certainly the least auspicious time for such an undertaking, and no safe model for the earthly weddings of which it is supposed to be the prototype. On all accounts, there is here no foundation on which to build important conclusions.

Nor shall we be able to find anything more solid in Prof. Jacobi's next plea, which is derived from the prescriptions of the Grihya-Sutras as to the time when a Vedic student is to be received by his teacher, and to commence study. Sankhayana sets this at the season when the plants appear: that is to say, at the beginning of the rains; and it is pointed out that the Buddnists also fix their season of study and preaching in the same part of the year. But Pâraskara puts the initiation of the student at the full moon of the month Srâvana, which ('Sravana being \$, a, \gamma Aquilæ) would have been first month of the rains in the second millennium before Christ; while Gobhila sets it, alternatively, in the month Bhâdrapada, which would have occupied the same position more than two thousand years earlier, or when the vernal equinox was at Orion. The author further points out that the Rumiyana (a comparatively very late authority) designates Bhâdrapada as the month for devoting one's self to sacred study; and that the Jains (whom one would think likely to be quite independent of Brahmanic tradition) do the same. The reason for fixing on this particular season Prof. Jacobi takes to be the fact that "the rainy months, during which all out-of-doors occupation ceases, are the natural time of study;" and then he makes the momentous assumption that the designations of Sravana and Bhadrapada can be due only to traditions from older periods, when those months began the rainy season respectively. On this point cautious critics will be little likely to agree with him. If the systematic study (memorization) of Vedic lore began as early as 4000 B. C., and could be carried on only in-doors, and so was attached closely to the in-doors rainy season, we should expect to find it attached throughout to the season, and not to the month, and especially in the case of the Jains: that these also abandoned the rains is one indication that the consideration was never a constraining one. And the orthodox Vedic student did not go to school for a limited time in each year, but for a series of years of uninterrupted labour; and on what date the beginning should be made was a matter of indifference, to be variously determined, according to the suggestions of locality and climate, or other convenience - or to the caprice of schools, which might seek after something distinctive. I cannot possibly attribute the smallest value to this part of our author's argumentation.

We are next referred by him to the connection established by several of the Brahmanas between the Phalguni's (β, δ, etc., Leonis) and the beginning and end of the year. The Táittiríya-Sanhhitá (vii. 4, 8) and the Pancharimía-Bráhmana (v. 9, 8) say simply that "the full-moon in Phalguni is the mouth (mukha, i. e., 'beginning') of the year;" this would imply a position of the sun near the western of the two Bhadrapada's (a Pegasi, etc.), and determine the Phalguna month, beginning 14 days earlier, as first month. The Kaushitaki-Brahmana (v. 1) makes an almost identical statement, but adds to it the following: "the latter (eastern) Phalgu's are the month, the former (western) are the tail:" and the Thittiriya-Bruhmana (i. 6, 2°) virtually comments on this, saying that "the former Phalguni's are the last night of the year, and the latter Phalguni's are the first night of the year." The Satapatha-Brahmana (vi. 2, 2, 18) puts it still a little differently: "the full moon of Phalguni is the first night of the year - namely, the latter one; the former one is the last [night]." All this, it seems, can only mean that, of two successive (nearly) full-moon nights in Phalguni, the former when the moon is nearer the former Phalguni, is the last night of one year, and the other the first night of the next year; and the only conclusion to be properly drawn from it is that the full-moon of the month Phalguna divides the two years. But Prof. Jacobi, by a procedure which is to me quite unaccountable, takes the two parts of the statement as if they were two separate and independent statements, interring from the one that Philguna was recognized by the Brahmanas as a first month, and from the other that the summer solstice was determined by them to lie between the former and latter Phalgun's - as if the san in the Phalgun's entered into the question at all, and as if the Brahmanas ever made any pretence to such astronomical exactness as would be implied in their drawing the solstitial colure between the former and the latter Phalgant's! What they have really done is bad and blundering enough, but quite of a piece with their general treatment of matters involving astronomical observation. For it is senseless to talk, in connection with the full moon in Phalguna, of a year-limit between the two Phalguni's; if the definition would fit the circumstances in a given year, it could not possibly do so in the year following, nor in the year after that, nor ever in two years in successions. sion. All that we have any right to infer from these Brahmana passages is that they recognize a reckening of the year (among others) that makes it begin in Phalguna; and this might be for one of a great many reasons besides the occurrence of the solstice near that group of stars four thousand years before Christ. In fact, all inferences drawn from varying beginnings of the year, in one and another and another month, seem to me helplessly weak supports for any important theory. With their customary looseness in regard to such matters, the ancient Hindus reckoned three, or five, or six, or seven seasons (ritii) in the year; and there was no controlling reason why any of these might not have been given the first place - the vacillating relations of the lunar months to the actual seasons adding their share to the confusion. Of course, any given month being taken as first, the ancient four-month sacrifices, of primary importance, would be arranged accordingly.

Professor Jacobi even tries (though with becoming absence of dogmatism) to derive a little support from the names of the two asterisms which, with the vernal equinox at Mṛigaśiras (Orion's head), would enclose the autumnal equinox, namely Jyeshthā 'eldest' before the equinox, and Mula 'root' after it: the former, he thinks, might designate the "old" year, and the latter be that out of which the new series springs and grows. But how should jyeshtha, 'oldest' or 'chief,' ever come to be so applied? The superlative is plainly and entirely unsuited to the use; and an asterism does not suggest a year, but only a month; and the asterism and month just left behind would properly be styled rather the "youngest," the most recent, of its series. If we are to determine the relations of the asterisms on such fanciful etymological grounds (after the manner of the Bráhmanas), I would repeat my suggestion, made in the notes to the Sárya-Siddhánta, that Mula (tail of the Scorpion) is 'root' as being the lowest or southernmost of the whole series; that Jyeshthâ (Antares, etc.) is its "oldest" branch, while in Viśākhâ 'divaricate' (a and β Libræ) it branches apart toward Svâti (Arcturus) and Chitrâ (Spica); this is at least much more plausible than our author's interpretation.

Finally, after claiming that these various evidences "point unmistakably" (untruglich) to the asserted position of the equinox at Orion in the oldest Vedic period, Prof. Jacobi goes on as follows: "The later Vedic period has applied a correction, consisting in the transfer of the initial point to Krittika (the Pleiades); and this very circumstance gives their determination a real significance; it must have been nearly right at the time of the correction." Here he seems to me to be wanting in due candor; I cannot see that he has any right to make such a statement without at least adding a caveat: "provided the system of asterisms was really of Hindu origin and modification," or something else equivalent to this. Doubtless he cannot be ignorant of the discussions and discordance of opinion on this subject, nor unaware that at least some of those who have studied it most deeply hold views which would deprive his statement of all value. If the asterismal system were limited to India, there would be much less reason for regarding it as introduced there from abroad—and yet, even in that case, some would doubtless have been acute enough to suspect a foreign origin. But it is found (as was pointed ont above) over a large part of Asia; and the only question is whether it was brought into India or carried out of India. What possible grounds has Prof. Jacobi for regarding its Indian origin as so certain that the opposing view has no claim even to be referred to? The eminent French astronomer Biot thought that he had proved it primitively Chinese, by an array of correspondences and historical evidences alongside of which our author's proofs of a remote

antiquity for the Veda make no show at all. Other scholars — e. g., Sédillot — have been as confident that the system had its birth in Arabia. Weber and I, on whatever other points we may have been discordant, agreed entirely, some thirty-five years ago, that it must have been introduced into India, probably out of Mesopotamia; nor, I believe, has either of us seen any reason for changing his conviction since. And I know of no modern scholar whose opinion is of any value that holds and has endeavored to show the contrary. Nothing in the Rig-Védu nor in the Brahmanas, and nothing in the later Saiskrit literature, tends in any degree to give us the impression that the ancient Hindus were observers, recorders, and interpreters of astronomical phenomena. On the contrary, their treatment of such facts (we have already seen an instance or two above) shews the same looseness and heedlessness that is characteristic of the Hindu genius everywhere in its relation to objective truths, to successive historical occurrences. That no hint of the existence of a planet can be found in the Rig-Véda is enough by itself to shew that the Hindus of that period had not devised an asterismal system. A late hymn or two, and passages in the Brihmanas, shew the recognition of a year of 360 days, divided into 12 months of 30 days each, beside a system of lunar months, which would give a year of only 354 days: what their relation to one another, how their differences were reconciled, and by what method either reckoning was kept in unison with the true year, no one knows. The earliest so-called "Vedic" astronomical manual (vedinga), the Jyotisha, whose first object, seemingly, it ought to be to give rules on such points, is mostly filled with unintelligible rubbish, and leaves us quite in the lurch as regards valuable information. And when, not long after the beginning of our era, the Hindus had borrowed from Greece a true astronomical science, the product of long-continued and accurate observation, they at once proceeded to cast it into an artificial form, founded on assumed and consciously false data, adapting it to purely closet use, with exclusion of further observation: taking in as part of the data a grossly inaccurate determination of the positions of certain selected "junction-stars" (yogutara) of the asterisms. which positions they called dhruva 'fixed,' thus virtually denying the precession. That such observers and reasoners as these should have been capable, some four or five thousand years before Christ, of determining, or believing themselves to have determined, the position of the summer solstice as between \$\beta\$ and \$\delta\$ Leonis lacks to my mind any semblance of plausibility. Instead of shifting the beginning of the asterismal series from Mrignsiras (Orion's head) to Krittika (Pleiades) in the later Vedic period, I hold it as alone probable that they received the system from abroad with Krittika at its head, and would probably have retained it in that form until the present day but for the revolution wrought in their science by Greek teaching. When the beginning was shifted from Krittika to Asvini (Aries), it was for good reason, and owing to the change of position of the equinox; but the credit of this belongs to the Greeks, and not to the Hindus.

If Prof. Jacobi's main argument is thus wholly destitute of convincing force, neither can we attribute any greater value to the supporting evidence which he would fain derive from the mention of a polar star (dhruva, lit. 'fixed') by the Grihya-Sûtras, solely and alone as something which a bride is to be taken out and made to look at on the evening of her weddingday. For such observers, and for such a trifling purpose, any star not too far from the pole would have satisfied both the newly-wedded woman and the exhibitor; there is no need of assuming that the custom is one handed down from the remote period when a Draconis was really very close to the pole, across an interval of two or three thousand years, during which there is no mention of a pole-star, either in Véda or in Brahmana.

The success of the author of the other work here considered in establishing his kindred thesis is, as will readily be inferred, no better. Mr. Titak is not by profession a student of thesis is, as will readily be inferred, no better. Mr. Titak is not by profession a student of Indian antiquity, nor of astronomy, but a lawyer—a pleader and lecturer on law in Poonu. He was, as he states, led to his investigation by coming upon Krishna's claim in the Bhagavail-He was, as he states, led to his investigation by coming upon Krishna's claim in the Bhagavail-Gitâ: "I am Margasirsha among the months," ascribing to it an importance and authority which, considering the late date and secondary origin of that episode of the Mahabharate,

Western scholars would be far from endorsing. The investigation is carried on in an excellent spirit, with much and various learning, and with commendable ingenuity; it assembles many interesting facts, and makes some curious and attractive combinations; but, as appears to me, its arguments are in general strained, its premises questionable, and its conclusions lacking in solidity. A book larger than his own would be needed to discuss fully all that the author brings forward; nothing more can be attempted here than to excerpt and comment upon leading points, in such a way as to give a fair impression of his strength and his weakness.

Mr. Tilak's main object is, as already intimated, to establish that the asterism Mrigastras (lit. 'deer's head') with its surroundings, or the constellation Orion with its neighbours, was a great centre of observation and myth-making in the earliest time, even back to the period of Indo-European or Aryan unity — and this, not only because of its conspicuous beauty as a constellation, but also, and principally, for its position close to the vernal equinox in the fifth millennium before Christ: somewhat, it may be added, as the equal or superior prominence of the Great Bear is due in part to its character as a constellation, and in part to its place near the pole.

To this central point of the value of Orion we are conducted by a well-managed succession of stages. After a general introductory chapter, on which we need not dwell, the second is entitled "Sacrifice alias the Year;" and in it begin to appear the misapprehensions to which reference has been made above. That there is a close relation between natural periods of time and the sacrifices is a matter of course: the morning and evening oblations depend upon the day; the new-moon and fall-moon ceremonies, upon the natural month; the four-month or seasonal sacrifices, upon the recognized seasons; and so, when the round of the year had made itself plain, there were established rites to mark its recurrence. But Mr. Tilak appears to hold that the year was fixed and maintained by and for the sake of the great sattra ('session') or protracted sacrifice that lasts a whole year. Unmindful of the fact that every ceremony of more than twelve days is called a sattra, and so that there are sattras of a great variety of lengths, even year-sattras for variously measured years, and (at least theoretically) for series of two or more years: failing also to see that they are, all of them, the very superfetation of a highly elaborated sacrificial system, implying orders of priests, accumulated wealth, and, one may even say, regulated city life - he views (pp. 13-14) the year-sattra as a primitive Indo-European institution, the necessary auxiliary to a calendar. "Without a yearly sattra regularly kept up, a Vedic Rishi could hardly have been able to ascertain and measure the time in the way he did The idea of a sacrifice extending over the whole year may be safely supposed to have originated in the oldest days of the history of the Aryan race." Then, in order to trace back into the Rig-Véda a recognition of the two syanas ('courses') or halves of the year, the northern and the southern - those, namely, in which the sun moves respectively northward and southward, from solstice to solstice, or else (for the word has both varieties of application) on the north and on the south of the equator from equinox to equinox he determines that meaning to belong to the Vedic terms devaying and pitriying: and this is and utier and palpable mistake; the words have no such value; devaying occurs a dozen times, usually as adjective with some noun meaning 'roads,' and never signifies anything but the paths that go to the gods, or that the gods go upon, between their heaven and this world, to which they come in order to enjoy the offerings of their worshippers; and pitriulan, occurring only once, designates in like manner the road travelled by the Fathers or manes, to arrive at their abode. There is, in fact, nothing yet brought to light in the Rig-Véda to indicate, or even intimate, that in its time such things as eyence and equinoxes and solstices, regarded as distances and points in the heavens, had ever been thought of; everything of the kind that the anthor of Orien thinks to find there is projected into the oldest Veda out of the records of a much later period. And these two fundamental errors are enough of themselves to vitiate his whole argument.

The next chapter (III.) is entitled "The Krittikas." Over its main thesis - namely. that in the earlier time the asterismal system began with Krittika (Pleiades) instead of Asvini (Aries) - we need not linger; that is conceded by everyone, and has been sufficiently set forth above: together with, it is believed, its true explanation. The (as concerns this point) crucial question respecting the origin of the system Mr. Tilak barely mentions in his Introduction (p. 6 ff.), declining to enter into any discussion of it: and, from his point of view, not without reason; for if he is in a position, as he claims, to prove that India had a yet earlier system beginning with Mrigasiras (Orion), he has demonstrated the Hindu origin, in spite of all that has been said and can be said against it. A considerable part of the chapter is taken up with a full quotation, accompanied by translation and discussion, of two parallel nassages from the Taittiriya and the Kaushitaki Brahmanas, respecting the times of consecration for the year-sattra. Four different times are prescribed in succession: the last quarter in the month Magha, the full-moon of the following month Phalguna, the full-moon of the next succeeding month Chaitra, and four days before the full-moon (i.e., doubtless, of Châitra: but some native authorities regard Magha as intended: see Weber, Nakshatras, ii. 343); objections are raised to the convenience of the first two, and the others (virtually one) are approved as acceptable. If, now, this sattra were, as Mr. Tilak assumes and fully believes, a counterpart of the year, established in primeval times on competent astronomical knowledge, for the purpose of keeping the calendar straight, and accordingly adapted precisely to the movements of the sun; and if its vishuvant or central day (with 180 days of ceremonies in a certain order preceding it, and 180 days of the same in a reverse order following it), were attached necessarily to an equinox, because the word vishuvant implies an equal division of the day between light and darkness; and then if there were no way of explaining the series of alternative beginnings excepting by recognizing two of them as conservative traditions from times that fitted these astronomical conditions - then, and only then, we could use them as sufficient data, inferring from them the positions of the equinox, and hence the epochs, at which they were successively established. But all these necessary conditions appear to be wanting. Weber, in his essays on the Nakshatras (ii. 341 ff.), quotes and expounds the same Brahmana passages in full. He demonstrates yet other allowed seasons for beginning the year-sattra, out of the Kaushitaki-Brahmana itself and out of the Sútras. So far as any preference is shewn in connection with the incidence of the vishuvant-day, it is for the solstice instead of the equinox. And the texts which set forth the different dates side by side are plainly unaware of any deeper reason for the choice of one instead of another. In short, there is nothing to be fairly inferred from these quoted passages except that considerable diversity prevailed in practice, and was allowed, as regards the time for commencing the sattra, and that the element of astronomical exactness did not enter into the case at all. How, indeed, should it do so, when the date was attached to any one of the constantly shifting lunar months? No fixation expressed in such terms could ever be accurate two years in succession. If there had been among the primitive Indo-Europeans, or among the earliest Hindus, science enough to establish such a rite by a certain sidereal position of the sun, there would have been enough to keep it there, without transference to an ever oscillating date.

The next chapter is called "Agrahayana," and is devoted to a learned and ingenious argument to prove that, as the word agrahayana means 'beginning of the year,' and is recognized as a name for the month Margasirsha (with the moon full near Orion), that month must have been at one time regarded as first of the twelve (or thirteen). This may be freely granted, without at all implying that the asterism Mrigasiras (Orion's head) was ever first of the asterismal series, and for the reason that it lay nearest to the vernal equinox. The extended and intracate discussions into which Mr. Tilak enters as to the relation of agrahdyana and its derivatives, agrahdyani, etc., as laid down and defended by various native lexicographers and grammarians, are rather lost upon us, who value far more highly a few instances of actual and natural use in older works than the learned and artificial incubrations of comparatively modern Hindu

savants; that agrahdyana itself designates the asterism M rigasiras, and so proves it to have been first asterism of a series beginning and ending with the year, is by no means to be credited, in the absence of any passages exhibiting such use, and against the evidence of all the analogies of asterismal nomenclature.

In the following chapter, "the Antelope's Head," we come to the very centre of our author's position. By the name antelope's or deer's head (mriqueirus) has been generally understood the little group of inconspicuous stars in the head of Orion, constituting one of the series of asterisms, while the brilliant star a in his right shoulder constitutes another, called Ardra ('wet'): the whole constellation of Orion has been viewed as the antelone (mriga): and, correspondingly, the neighbouring Sirius is named mriqavyadha 'deer-hunter.' while the three stars of Orion's beit, which point just in the direction of Sirius, are the "three-jointed arrow" (ishus trikindů) shot by the hunter. Mrigaširas, as so understood, is in itself an insignificant group, and we have some reason for wondering why the bright y, Orion's left shoulder, was not selected instead; but the general constellation is so conspicuous that anything standing in a clearly definable relation to it might well be regarded as sufficiently marked; and, at any rate, the identity of this group as the asterism is established beyond all reasonable question by the circumstance that it is accepted as such in the two other systems, the Chinese and the Arab. Mr. Tilak, however - under what inducement, it seems difficult to understand - desires to change all this, and to turn the entire constellation of Orion into a head, with what we call the "belt" running across the forehead at the base of the horns. By so doing he cuts loose altogether from the traditional asterismal systems, makes up an unacceptable constellation with some of the brightest stars omitted, regards the deer as shot through the top of the skull with the arrow, as if this had been rifle-bullet. All this, though our author values it so highly as to make his frontispice of it, is to be summarily rejected. If the Hindus of the Brahmana period saw, as they plainly did, a deer (mriga) in Orion, it should be enough for us that the asterismal system adopts its head as one member; the establishment of the deer itself might be as much older as there is evidence to prove it. Mr. Tilak tries to find something relating to it in the Rig-Véda, by pointing out that the dragon slain by Indra is more than once spoken of there as a "wild beast" (mriga: this is the original, and in ancient times the only, meaning of the word); and that, as he claims, Indra cuts off the head of his foe the . dragon; but here, as nearly everywhere that he appeals to the Rig-Véda, his exegesis is faulty: two of his three passages speak of "splitting" (bhid) the head, and the other of "crushing" (sam-pish) it; no cutting off is alluded to; and all attempts to find in the earliest Veda a severed head of a mriga, in whatever sense of the word, are vain. If, as he asserts, there are Hindus at the present time who point out the belt of Orion as the asterism Mrigasiras, that can be nothing more than a popular error, substituting for one group of three stars another and brighter one in its vicinity, and easily explainable of a people who have long been notoriously careless as to the real identity of their asterisms.

Then the author goes on to find in the the Milky Way, near by, the river that separates this and the other world, and in Cauis Major and Canis Minor the two dogs that guard it on either side, and the two dogs of Yama, and the dog of the Avesta, and Saramâ, and Cerberus, and the dog whom (R.-V. i. 161, 13: see below) the he-goat accessed of waking up the Ribhus — all very ingenious and entertaining, but of a nature only to adorn and illustrate a thesis already proved by evidence possessing a quite other degree of preciseness and cogency. We are taught to regard the deer, the hunter, and the dogs as originally Indo-European, the dogs having been later lost (from the sky) by Hindu tradition, and the hunter (as distinguished from the deer) by Greek tradition. Throughout the discussion, the treatment and application of Rig-Véda passages is far from being such as Western scholarship can approve; and the same is the case with the final conclusion of the chapter, that "the three principal deities in the Hindu mythology can be traced to and located in this part of the heavens" — the trio being Vishan, Radra, and Prajapati.

The sixth chapter, " Orion and his Belt," continues the same argument, and with The sixth chapter, "Orion and his beit, containing and its derivatives are dences to which we must take equal exception. Agraháyana and its derivatives are to come probably from another than a same to come probably from a same to come a same to brought forward for explanation, and its hunana is made out to come probably from anana, brought forward for explanation, and its nayana is missing facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts are adduced, as hinv and involve an indifferent h prefixed (for which various supporting facts). an indifferent h prefixed (for which various supporting the vowel lengthened; and thus agrahayan is identified with agrayan, the sacrifice of first related the vowel lengthened; and thus agrahayan is identified with agrayan, the sacrifice of first related to the plane. while the latter is further on identified with the name Orion. The number of the plane the inferred of the discovery of II. while the latter is further on identified with the maintained, of the discovery of United its found to be "fixed at nine" (with anticipation, it is to be inferred, of the discovery of United its flower of the maintained (the and Neptune), since there are nine grahas or 'dips' of liquid oblation at the sacrifice (the mon name of a planet being also graha). The sacred thread of the Brahmans comes From mon name of a planet being also graha). The sacration orion's belt as its prototype; and the belt, staff, and antelope's skin of the Brahmanic Orion's belt as its prototype; and the Delt, seal, orion's trappings. The chapter has pupil commencing his Vedic study go back equally to Orion's trappings. And the first part of chapter VII., "Ribhus and Vrishakspi," is of the same ance of Orion. And the first part of chapter vil., character. It is suggested that the means - turiyena brahmana (R.-V. v. 46, 6), 'by the fourth character. It is suggested that the means—turiyone bringing the eclipsed sun back into prayer' — which the sage Atri employed succession, the sky, was perhaps a quadrant or some similar instrument. Planets are recognized in the sky, was perhaps a quadrant or some summar and sukra (= cypris) being names of brihaspati, in sukra and manthin, and in rena, both vena and sukra (= cypris) being names of brihaspati, in sukra and manthin, and in vena, noun vena, beat to devoted to the discussion of Venus — and so on. Then the principal part of the chapter is devoted to the discussion of a Venus — and so on. Then the principal part of the couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 13, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 161, 17, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 18, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 18, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 18, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 18, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda. At i. 161, 18, we read thus: "Having slept, to couple of obscure legends from the Rig-Véda." Ribhus, ye asked: 'Who, O Agohya, hath awakened us?' The he-goat declares the dog to Ribhus, ye asked: 'Who, U Agonya, hath awaxunce — to be the awakener; in a year thus to-day have ye looked out (i. e., opened your eyes);" to be the awakener; in a year thus to-day have ye looked out (i. e., opened your eyes);" and be the awakener; in a year thus to-day have ye received a with Agohya. If, now (as has been iv. 33, 7, says that the Ribhus slept twelve days as guests with Agohya. If, now (as has been iv. 34, 7, says that the Ribhus slept twelve days as guests with Agohya. iv. 33, 7, says that the Ribhus slept twelve ways to 5 of the season (which is reconcilable with suggested also by others), the Ribhus are the divinities of the season (which is reconcilable with suggested also by others), the Kibhus are the ulvillosome with all); and if Agohya, lit. the unconcealable one,' is the sun; and if the twelve days of recreation are the twelve that unconcealable one, is the sun; and if the property one (one, unfortunately, of 366 days must be added to the lunar year to fill it out to a solar one (one, unfortunately, of 366 days and if "in a year") (artists year) which neither Vedic tradition nor astronomy sanctions); and if "in a year" (saivate ve) which neither Vedic tradition nor astronomy same might be if the sleep had been of a year' (which might be if the sleep had been of a year's means distinctly 'at the end of the year (white all beingth, but is far less probable, if not impossible, supposing it to have been of twelve days only) — then the dog that roused them (or, at least, was accused of having done so by the beauty). goat, whom Mr. Tilak this time interprets to be the sun), presumably in order to recommence their duties at the beginning of a new year, may have been Canis Major (although this is mence their duties at the beginning of a new year, as we saw above, having lost that feat one nowhere called a dog in Hindu tradition, the Hindus, as we saw above, having lost that feat one of the original Indo-European legend); and this would imply the sun's start upon his yearly round from a vernal equinox in the neighbourhood of Orion, at four to five thousand years before Christ. Doubtless it will be generally held that a conclusion depending on so many uncertainties and improbabilities is no conclusion at all. If it were already proved by sound evidence that the Hindus began their year, at the period ramed, from an observed equinor at that point in the heavens, then the interpretation of the legend offered by our author might be viewed as an ingenious and somewhat plausible one; but such an interpretation of such legend is far too weak a foundation to build any belief upon.

As for the Vrishakapi Hymn (R.-V. x. 86), the use made of it in the chapter seems utterly fanciful and unwarranted. Of all who have attempted to bring sense out of that strange and obscure passage of the Rig-Véda, no one is less to be congratulated on his success than Mr. Tilak. His discussion of it is only to be paralleled with the endeavour to extract sunbeams from cucumbers, and does not in the least call for examination or criticism in detail. Nor need we spend any words upon the final chapter, "Conclusions," in which the theories and suggestions of the work are gathered and presented snew, without added evidences, in their naked implausibility. Our own conclusion must be that the argument is wholly unacceptable, and that nothing has been brought forward, either by him or by Jacobi, that has force to shange the hitherto current views of Hindu antiquity.

BOOK-NOTICE.

THE BOWER MANUSCRIPT.

A BRIEF account of the progress made in the publication of this important work, under the editorship of Dr. Hoernle, may interest our readers.

In Vol. XXI. of this Journal, pp. 29 and following, Dr. Hoernle commenced an interesting series of papers dealing with the contents of this ancient manuscript. It will be remembered that he said:—

"It consists of not less than five distinct portions.

"The first portion consists of 31 leaves. It contains a medical work. * * * * I shall designate it by the letter A.

"The second portion, to be called B, which immediately follows the first portion, consists of five leaves, and forms a sort of collection of proverbial sayings. * * * *

"The third portion, C, consisting of four leaves, contains the story of how a charm against snakebite was given by Buddha to Ananda. * * * *

"The fourth portion, D, consists of six leaves. It * * * appears to contain a similar collection of proverbial sayings to the second portion, B.

"The fifth portion, E, which also consists of five leaves, contains another medical treatise

The first part of Dr. Hoernle's edition appeared in 1893. It included the whole of the fifth portion called E above. This is an incomplete medical work, — and consists, so far as we have it, of 1312 verses, written on five leaves of the MS. The method of editing this, as well as the other portions of the MS. is, first to give a transcription of the text in Roman characters, with critical footnotes; next to give the translation, illustrated with copious armotations, and finally to give facsimile plates of the MS., accompanied, leaf by leaf, with a line for line transcription in the Dêvanâgarî character.

The second part has appeared in two fasciculi: the first published in 1894, and the second in the present year. It contains what Dr. Hoernle, in

1892, called the first portion A, of the MS. I originally consisted of 33 leaves, but two of these (Nos. 20 and 21) are missing, and two others (the 16th and 17th) are the merest fragments. It is a medical treatise, originally in sixteen chapters, of which the two last are wanting. It differs from Part I., in being a series of prescriptions for various diseases, while the former partakes more of the nature of a materia medica, and describes the nature and effects of various drugs. From the introductory verses we learn that the work is called the Navantaka, and that the contents are as follows:—

```
Chapter I. - Formulas for powders.
                        .. the various kinds
       II. -
                           of clarified butter.
                        , medicated oils.
       III. —
       IV. - Miscellaneous formulas.
        V. - Formulas for enemas.
       VI. -
                        ., tonics.
     VII. -
                        .. gruels.
                        ., aphrodisiacs.
    VIII. -
      IX. -
                        , collyriums.
                 ,,
       X. --
                        " hair-washes.
                 99
       XI. — The modes of using chebulic my-
                                  robalan.
  " XII. –
                                 bitumen.
                           ••
                                 plumbago-
  " XIII. —
                                  root.
  " XIV. - The treatment of children.
  ,, XV. --
                            .. barren women.
  " XVI. —
                            .. women
                                         who
                               have children
```

It will be seen that out of a total of fifty-one leaves, thirty-six have been disposed of in these three fasciculi, and we may congratulate the Editor on his coming within sight of the completion of his task.

This is not the time for criticizing the way in which this task is being accomplished, nor was it our purpose, in undertaking this note, to do so. But we cannot conclude without expressing our admiration at the learning and perspicuity exhibited on every page, and at the style in which the work is being brought out by the Government of India.
